Malak, Ottawa

The Hill —

under whose towered crown has unfolded the panorama of Canada's political history and from whose halls have emanated the national laws under which have lived and laboured a free, diverse and united people. The Hill spans the years, through the struggle of beginnings in a vast and challenging land to the present excitement of a changing, growing, developing nation. The small stone building nestling at its side, standing as it stood in 1827 when it was erected as a workshop for the builders of the Rideau locks and canal, is a reminder of those who turned a great untouched domain into the flourishing Canada of today.

PREFACE

The 1966 edition of the Canada Year Book continues a series of annual publications giving official statistical and other information on almost every measurable phase of Canada's development. As the economy of the country has expanded, the Dominion Bureau of Statistics has endeavoured to present the story of this development, summarizing a great mass of detailed statistical, legislative and other pertinent information concisely within the covers of one volume and supplementing it with data from other Departments of the Federal Government and from the provinces.

Each chapter contains the latest information procurable at the time of printing, the emphasis changing with progress and developments in the field covered and new data added as they become available. The current edition contains a special article on "The Flora of Canada" (pp. 35-61), a subject last covered in the 1938 edition. Also included is specially prepared material on "Mobility of Canada's Population, 1956-1961" (pp. 179-187) and on "Contribution of the Canada Department of Agriculture to Modern Agricultural Science" (pp. 457-461). The chapter on Trends in Economic Aggregates is extended to include, for the first time, a Section on Productivity and a detailed write-up on the program and activities of the Economic Council of Canada and the Atlantic Development Board.

Because of changes in the designations of several Federal Government Departments and a considerable re-arrangement of duties among them, announced shortly before going to press but not yet implemented, it was considered advisable to omit from this edition the Directory of Sources of Official Information usually appearing in Chapter XXVII. For the same reason, the chart showing the organization of the Government of Canada is not inserted in Chapter II. This chart will be prepared as soon as the departmental re-organization is completed and, if available before distribution of this volume, will be placed in the envelope inside the back cover. If not, copies may be secured on request from the Dominion Bureau of Statistics. As in previous editions, the back cover pocket will contain a 140-mile-to-the-inch political map of Canada.

The present volume was produced in the Canada Year Book, Handbook and Library Division by Miss Margaret Pink, Associate Editor, and the Year Book staff under the editorship and direction of Dr. C. C. Lingard, Director of the Division. The charts and maps, except where otherwise indicated, were prepared by L. Tessier of the Drafting Unit.

The co-operation of numerous officials of the various Departments of the Federal and Provincial Governments and of this Bureau in the preparation of material for the Year Book is gratefully acknowledged. Credit by means of footnotes is given where possible, either to the persons or to the public service concerned.

Walter E. Suffert.

WEIGHTS AND MEASURES AND OTHER INTERPRETATIVE DATA

In Canada as a rule the Imperial system of weights and measures is followed; an exception is the ton where, unless otherwise stated, the short ton of 2,000 lb. is meant.

Relative Weights and Measures, Imperial and United States

The following list of coefficients may be used to translate amounts expressed in one unit to the other. Where reference is made to Imperial pint, quart and gallon, their equivalent in ounces is also in Imperial measure: likewise United States designations for these quantities are shown in the U.S. equivalent in ounces. The Imperial (or British) fluid ounce and the U.S. fluid ounce are different measures. One Imperial fluid ounce equals 0.96 U.S. fluid ounce and one Imperial gallon equals 1.2 U.S. gallons.

1 Imperial pint=20 fluid ounces	1 short ton=2,000 pounds
1 U.S. pint=16 fluid ounces	1 long ton=2,240 pounds
1 Imperial quart=40 fluid ounces	1 barrel crude petroleum=35 Imperial gallons
1 U.S. quart=32 fluid ounces	1 ounce avoirdupois=0.91146 ounce troy (oz.t.)
1 Imperial gallon=160 fluid ounces	1 statute mile=5,280 feet
1 U.S. gallon=128 fluid ounces	1 nautical mile=6,080 feet
1 Imperial proof gallon=1.36 U.S. proof gallon	

The following weights and measures are used in connection with the principal field crops and fruit; 2.3 bu. of wheat are required to produce 100 lb. of flour.

	<i>Pounds per Bushel</i>		<i>Pounds per Bushel</i>

Rapeseed and mixed grains.....	50		
All others.....	60		

Fiscal Years of Federal and Provincial Governments

The fiscal year of the Federal Government and of each of the ten Provincial Governments ends on March 31. Throughout the Year Book, all figures are for calendar years except where otherwise indicated in text or table headings.

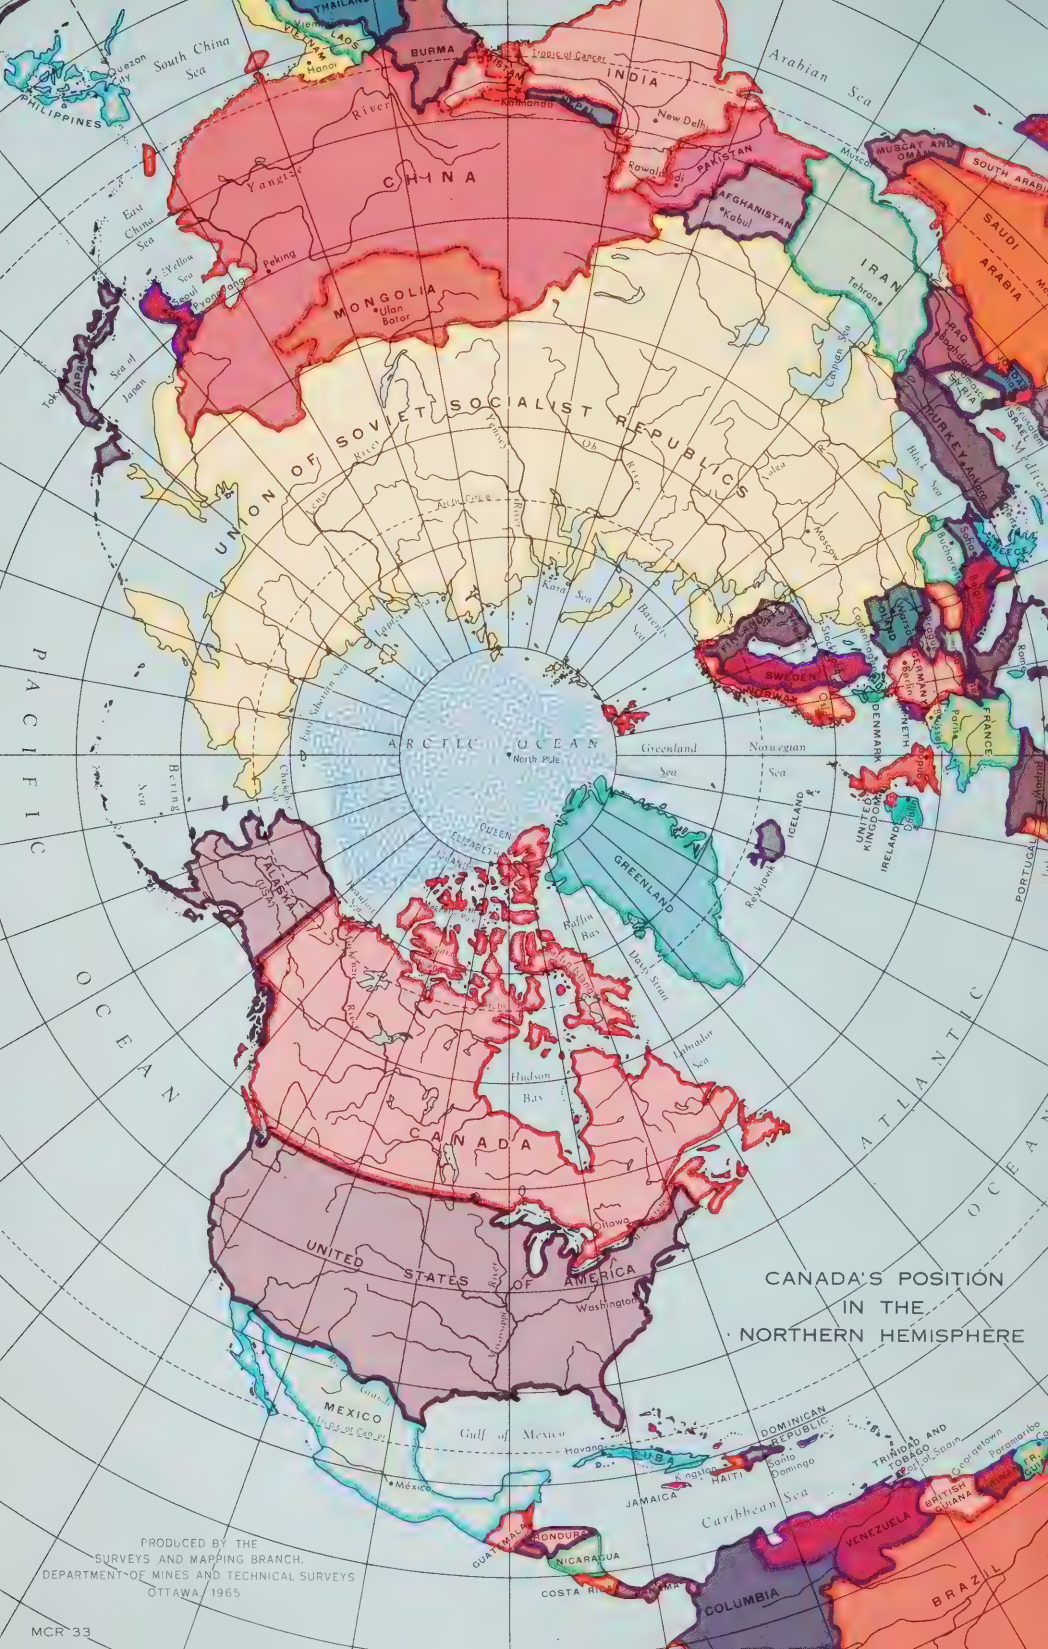

Miscellaneous

Maritime Provinces=Prince Edward Island, Nova Scotia and New Brunswick
 Atlantic Provinces=Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick
 Central Canada=Quebec and Ontario
 Prairie Provinces=Manitoba, Saskatchewan and Alberta
 Btu.=British thermal unit (coal)
 Mcf.=thousand cubic feet (gas)
 n.e.s.=not elsewhere specified
 n.o.p.=not otherwise provided for
 psi. (atomic research)=pounds-force per square inch (pressure)
 D.B.H. (forestry)=diameter at breast height.

SYMBOLS

The interpretation of the symbols used in the tables throughout this publication is as follows:—

- . . figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- - amount too small to be expressed or where “a trace” is meant.
- ° preliminary figures.
- ° revised figures.

PART I.—GEOGRAPHY AND GEOLOGY*

Canada occupies the northern half of the North American Continent with the exception of Alaska and Greenland, extending in longitude from Cape Spear, Newfoundland, at 52° 37' W, to Mount St. Elias, Yukon Territory, at 141° W, a distance of 88° 23' or 3,223 miles. In latitude it stretches from Middle Island in Lake Erie, at 41° 41' N, to the North Pole. The northernmost point of land is Cape Columbia on Ellesmere Island, at 83° 07' N, and the straight-line distance from Middle Island to Cape Columbia is 2,875 miles.

In shape, Canada resembles a distorted parallelogram with its four corners making important salients. In the north the salient formed by the Arctic Archipelago, which penetrates deep into the Arctic basin, guards the northern approaches to the Continent from Europe and Asia and makes Canada neighbour to the Union of Soviet Socialist Republics. In the south the salient of peninsular Ontario thrusts far into the heart of the United States. In the east the salient of Labrador and the Island of Newfoundland commands the shortest crossings of the North Atlantic Ocean and links Canada geographically with Britain and France. In the west the broad arc of land between Vancouver in southern British Columbia and Whitehorse in Yukon Territory provides the shortest crossings of the North Pacific Ocean between continental North America and the Far East. Canada thus lies at the crossroads of contact with the principal powers and some of the most populous areas of the world.

*Revised by the Geographical Branch, Department of Mines and Technical Surveys, Ottawa.

1.—Approximate Land and Freshwater Areas, by Province or Territory

NOTE.—A classification of land areas as agricultural, forested, etc., is given in Chapter X on Land Use and Renewable Resource Development.

Province or Territory	Land	Freshwater	Total	Percentage of Total Area
	sq. miles	sq. miles	sq. miles	
Newfoundland.....	143,045	13,140	156,185	4.1
Island of Newfoundland.....	41,164	2,195	43,359	1.1
Labrador.....	101,881	10,945	112,826	3.0
Prince Edward Island.....	2,184	—	2,184	0.1
Nova Scotia.....	20,402	1,023	21,425	0.6
New Brunswick.....	27,835	519	28,354	0.7
Quebec.....	523,860	71,000	594,860	15.4
Ontario.....	344,092	68,490	412,582	10.7
Manitoba.....	211,775	39,225	251,000	6.5
Saskatchewan.....	220,182	31,518	251,700	6.5
Alberta.....	248,800	6,485	255,285	6.6
British Columbia.....	359,279	6,976	366,255	9.5
Yukon Territory.....	205,346	1,730	207,076	5.4
Northwest Territories.....	1,253,438	51,465	1,304,903	33.9
Franklin.....	541,753	7,500	549,253	14.3
Keewatin.....	218,460	9,700	228,160	5.9
Mackenzie.....	493,225	34,265	527,490	13.7
Canada.....	3,560,233	291,571	3,851,809	100.0

In size, Canada is the largest country in the Western Hemisphere and the second largest country in the world. Its area of 3,851,809 sq. miles may be compared with that of the Union of Soviet Socialist Republics, 8,649,512 sq. miles,* the United States of America (including Alaska and Hawaii), 3,615,214 sq. miles,* and Brazil, 3,286,478 sq. miles.* It is more than forty times the size of Britain and eighteen times that of France. The immense size of the country, while encompassing many resources and seeming to afford much scope for settlement, imposes its own burdens and limitations, particularly because much of the land is mountainous and rocky or is under an arctic climate. The developed portion is probably not more than one third of the total; the occupied farm land is less than 8 p.c. and the currently accessible productive forest land 19 p.c. of the total. The population of Canada, estimated at 19,571,000 as at June 1, 1965, may be compared with 189,375,000† for the United States (including Alaska and Hawaii) (1963) and with 76,409,000† for Brazil (1963).

The milages in Table 2 are another indication of the size of Canada. They show the length of communication facilities required between the larger cities, between outlying industrial communities built up around large mining or smelting projects and the nearest cities, and between northern outposts and the supplying cities. In this table mileage given is for the major means of transport used between the points concerned; air milages are given for most transcontinental distances.

The length of Canada's southern border adjoining the United States is 3,986.8 miles and the length of the Yukon-British Columbia border adjoining Alaska is 1,539.8 miles.

* *United Nations Statistical Yearbook, 1963.*

† *United Nations Population and Vital Statistics Report, Apr. 1, 1965.*

2. Travel Distances between Certain Cities and Other Points of Interest in Canada

NOTE.—The dash used in this table indicates that the distance concerned is of no particular interest. In each case the mileage given is for the type of travel most generally used—road (H), rail (R), air (A) or water (W); air mileages are given for most transcontinental distances. Water routes are given in nautical miles.

Section 1.—Physical Geography

Subsection 1.—Main Physical and Economic Features of the Provinces and Territories

Politically, Canada is divided into ten provinces and two territories. Each province is sovereign in its own sphere and administers its own natural resources, and upon such resources, as related to topography, position and climate, is based the economy of the province. The resources of the Yukon and Northwest Territories, because of the remoteness, the great extent and the meagre and scattered populations of these areas, are administered by the Federal Government.

The main physical and economic characteristics of each province and territory are described in some detail in the 1963-64 Year Book; this article is available in reprint form. Also, it should be mentioned that the economic development of the country as a whole, based in the first instance on physical features and later on other factors, has formed regions quite distinct from the political divisions. These economic regions are described in an article appearing in the 1962 Year Book at pp. 17-23.

All geographical data on Canada that might be of use in promoting the country's economic, commercial and social welfare are available from the Geographical Branch of the Department of Mines and Technical Surveys. The work of this Branch includes the compiling of geographical material of national significance and the conducting of geographical

surveys in the field. Land surface conditions, land use, types of vegetation and the structure of towns and cities are typical subjects of investigation. The Canadian Permanent Committee on Geographical Names, administered by the Branch, deals with all questions of geographical nomenclature affecting Canada and undertakes research and investigation into the origin and usage of geographical names. The Committee is composed of representatives of the federal mapping agencies and other federal agencies concerned with nomenclature and a representative appointed by each province.

Subsection 2.—Inland Waters

The inland waters of Canada (not including saltwater areas that are a part of Canada) are extensive, constituting about 7.6 p.c. of the total area of the country. Aside from their basic essentiality to the support of life, Canada's fast-flowing rivers and chains of lakes have had a great bearing on the development of the country and on its economic and social well-being. In the early days of exploration and settlement, they were the avenues of transportation and often the source of subsistence. These functions have now diminished in importance; with the exception of the St. Lawrence and certain water routes in the interior and the Far North, the rivers and lakes have assumed other roles in the domestic, industrial, agricultural and recreational life of the people. They still serve as efficient carriers of pulpwood from the forests to the mills and their waters are harnessed to provide power for industry or are dammed and diverted to irrigate and bring life to otherwise waste land.

The inland waters of Canada are best studied by segregating the main drainage basins. The Atlantic drainage basin is the most important, being dominated by the Great Lakes-St. Lawrence system which drains an area of approximately 678,000 sq. miles and

forms an unequalled navigable inland waterway through a region rich in natural and industrial resources. From Duluth, Minn., at the head of Lake Superior to Belle Isle at the entrance to the Gulf of St. Lawrence the distance is 2,280 miles. The entire drainage area to the north of the St. Lawrence and the Great Lakes is occupied by the southern fringe of the Canadian Shield—a rugged, rocky, plateau region over the edge of which tumble many swift-flowing tributary rivers. These rivers, as well as the St. Lawrence itself, provide the electric power necessary to operate the great industries of the area. South of the St. Lawrence, the smaller rivers are important locally. The St. John, for instance, drains a fertile area and provides most of New Brunswick's hydro power.

The Hudson Bay drainage basin, although the largest in area, is the least important economically. Only the Nelson and Churchill Rivers have power potential within economical distance of settled areas. The two main branches of the Saskatchewan River, tributary to the Nelson, drain one of Canada's great agricultural regions and are now the bases of important irrigation projects.

The Arctic drainage basin is dominated by the Mackenzie, one of the world's longest rivers, which flows 2,635 miles from the head of the Finlay River to the Arctic Ocean and drains an area in the three westernmost provinces of approximately 700,000 sq. miles. Except for a 16-mile portage in Alberta, it is possible for steamboats to navigate from the end of steel at Waterways on the Athabasca River to the mouth of the Mackenzie, a distance of 1,700 miles.

The rivers of the Pacific basin rise in the mountains of the Cordilleran Region and flow to the Pacific Ocean over tortuous, precipitous courses, rushing through steep canyons and tumbling over innumerable falls and rapids. They provide power for large hydro developments and in season swarm with salmon returning inland to their spawning grounds. The major rivers of the basin are the Fraser which rises in the Rocky Mountains and toward its mouth flows through a rich agricultural area, the Columbia which is an international river with a total fall of 2,650 feet during its course and has thus a tremendous power potential, and the Yukon River which is also an international river but, though the largest on the Pacific slope, is at present relatively unimportant economically.

Table 3 lists the principal rivers of Canada and their tributaries. The tributaries and sub-tributaries are indicated by indentation of names; thus the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

3.—Lengths of Principal Rivers and Their Tributaries

Subsection 3.—Coastal Waters*

The coastline of Canada, one of the longest of any country in the world, comprises the following estimated milages:—

Mainland—

Atlantic, 6,110; Pacific, 1,580; Hudson Strait, 1,245; Hudson Bay, 3,155; Arctic, 5,770; total, 17,860 miles.

Islands—

Atlantic, 8,680; Pacific, 3,980; Hudson Strait, 60; Hudson Bay, 2,305; Arctic, 26,785; total, 41,810 miles.

A comprehensive description of the coastal waters of Canada would require information from sciences such as oceanography, marine biology and meteorology. However, the basic factor in any study of the oceanic-continental margin is the physical relief of the sea floor, and the scope of the information presented here is therefore restricted to this and a few salient features of the Atlantic, Arctic and Pacific marginal seas surrounding Canada.

Atlantic.—Along this coastal area, the sea has inundated valleys and lower parts of the Appalachian Mountains as well as those of the Canadian Shield. The submerged continental shelf, protruding seaward from the shore, effects the transition from continental to oceanic conditions. This shelf is distinguished by great width and diversity of relief. From the coast of Nova Scotia its width varies from 60 to 100 miles, from Newfoundland 120 to 50 miles (at the entrance of Hudson Strait), and northward it merges with that of the Arctic Ocean. The outer edge of the shelf, known as the continental shoulder, is of varying depths of from 100 to 200 fathoms before the shelf suddenly gives way to the steep declivity leading to abyssal depths. The over-all gradient of the Atlantic continental shelf is slight but the whole area is studded with shoals, plateaux, banks, ridges and islands and the coasts of Nova Scotia and Newfoundland are rugged and fringed with islets and shoals. Off Nova Scotia the 40-fathom line lies at an average of 12 miles from the shore and constitutes the danger line for coastal shipping. The whole floor of the marginal sea appears to be traversed by channels and gullies cutting well into the shelf.

The main topographical features of the Atlantic marginal sea floor are attributed to glacial origin but land erosion is an important factor. Eroded materials are carried seaward by rivers, ice and wind, and wave action against cliffs and shore banks washes away enormous masses that are deposited over the surrounding sea floor. The topography of the continental sea floor is therefore constantly changing and navigation charts of Canada's eastern seaboard must be continuously revised.

Hudson Bay and Hudson Strait bite deeply into the Continent. Hudson Bay is an inland sea 250,000 sq. miles in area having an average depth of about 70 fathoms; the greatest charted depth in the centre of the Bay is 141 fathoms.

Hudson Strait separates Baffin Island from the continental coast and connects Hudson Bay with the Atlantic Ocean. It is 430 miles long and from 37 to 120 miles wide and its greatest charted depth of 481 fathoms is close inside the Atlantic entrance. Great irregularities of the sea floor are indicated but, except in inshore waters, few navigation hazards have been located.

Arctic.—The submerged plateau extending from the northern coast of North America is a major part of the great continental shelf surrounding the Arctic Ocean, on which lie all the Arctic islands of Canada, Greenland, and most of the Arctic islands of Europe and

* The Federal Government's oceanographic research program is outlined in Chapter XIII.

Asia. This shelf is most uniformly developed north of Siberia, where it is about 500 miles wide; north of North America it surrounds the western islands of the Archipelago and extends 50 to 300 miles seaward from the outermost islands.

The topography of the floor of the submerged part of this continental margin is only partly explored but sufficient has been charted to indicate, in common with continental shelves throughout the world, an abrupt break at the oceanward edge to the relatively steep declivity of the continental slope. This slope borders the western side of the Queen Elizabeth Islands and, from it, deep well-developed troughs enter between the groups of islands. Sills across Davis Strait, Barrow Strait and other channels, on which the depth is about 200 fathoms, interrupt the network of deep troughs and separate the Arctic basin from the Atlantic.

That part of the continental shelf bordering the Arctic Ocean in the vicinity of the Queen Elizabeth Islands (see below) is the subject of extensive study. Since 1959 a party based at the joint Canadian-United States weather station at Isachsen on Ellef Ringnes Island has been investigating the oceanography, hydrography, submarine geology, gravity, geomagnetic features and crustal seismic properties of the continental shelf area, carrying out physiographic, hydrological, permafrost and glaciological studies on the islands of the region, mapping the nature, distribution and movement of the sea ice, and running basic topographic control surveys. This work is continuing, with a party in the field from March to September each year, and should eventually cover all of the unmapped parts of the shelf between Greenland and Alaska. The investigations should yield detailed and accurate information on the physical and chemical composition and dynamic characteristics of the Arctic oceanic waters, the bathymetry of the continental shelf and slope and the straits and sounds of the Archipelago; the topography and structure of the shelf and the nature of its sediments, its underlying rocks and possible mineral resources; the structure and physical characteristics of the northern edge of the North American continental platform and its contact with the Arctic Ocean basin; the factors controlling the development of the Arctic landscape and the evolution of the islands; and the behaviour of sea level, glaciers, sea ice and climate in the recent geological past.

Pacific.—The marginal sea of the Pacific differs strikingly from the other marine zones of Canada. The hydrography of British Columbia is characterized by bold, abrupt relief—a repetition of the mountainous landscape. Numerous inlets penetrate the mountainous coast for distances of 50 to 75 miles. They are usually a mile or two in width and of considerable depth, with steep canyon-like sides. From the islet-strewn coast, the continental shelf extends from 50 to 100 sea miles to its oceanward limit where depths of about 200 fathoms are found. There the sea floor drops rapidly to the Pacific deeps, parts of the western slopes of Vancouver Island and the Queen Charlotte Islands lying only four miles and one mile, respectively, from the edge of the declivity. These great detached land masses are the dominant features of the Pacific marginal sea. As is to be expected in a region so irregular in hydrographic relief, shoals and pinnacle rocks are numerous, necessitating cautious navigation.

Subsection 4.—Islands

The largest islands of Canada are in the north and all experience an arctic climate. The northern group extends from the islands in James Bay to Ellesmere Island which reaches 83°07'N. Those in the District of Franklin lie north of the mainland of Canada and are generally referred to as the Canadian Arctic Archipelago; those in the extreme north—lying north of the M'Clure Strait-Viscount Melville Sound-Barrow Strait-Lancaster Sound water passage—are known as the Queen Elizabeth Islands.

On the West Coast, Vancouver Island and the Queen Charlotte Islands are the largest and the most important but the coastal waters are studded with many small rocky islands.

The Island of Newfoundland forming part of the Province of Newfoundland, the Province of Prince Edward Island, Cape Breton Island forming part of the Province of Nova Scotia, Grand Manan and Campobello Islands forming part of the Province of New Brunswick, and Anticosti Island and the Magdalen group included in the Province of Quebec are the largest islands off the East Coast.

Notable islands of the inland waters include Manitoulin Island (1,068 sq. miles in area) lying in Lake Huron, the so-called Thirty Thousand Islands of Georgian Bay and the Thousand Islands in the outlet from Lake Ontario into the St. Lawrence River.

Subsection 5.—Mountains and Other Heights

The predominant geographical feature in Canada is the Great Cordilleran Mountain System which contains many peaks over 10,000 feet in height. The highest peak in Canada is Mount Logan in the St. Elias Mountains of Yukon Territory, which rises 19,850 feet above sea level. The highest elevations in all parts of the country are shown in Table 7 in feet above mean sea level.

7.—Principal Heights in each Province and Territory

NOTE.—Certain peaks, indicated by an asterisk (*), form part of the line of demarcation between political subdivisions. Although their bases technically form part of both areas, they are listed only under one to avoid duplication.

Section 2.—Geology*

North America comprises six main natural regions which are both physiographic and geological because the ages, kinds and structures of the underlying rocks determine the natures of the land surfaces. Knowledge of these regions is important because their geological characteristics have much influence on the suitability of different areas for such activities as agriculture, mining, petroleum production and sports, and contribute as well to the varied scenery of the country. The six regions are: the Canadian Shield, a vast area of ancient rocks that is mainly in Canada; the Interior Plains and Lowlands, the largest area of which extends throughout the mid-Continent from the Gulf of Mexico to the Arctic Ocean; the Appalachian Region, mainly in the United States but also forming an important

*Prepared by Dr. A. H. Lang and published by permission of the Director, Geological Survey of Canada, Ottawa.

part of Eastern Canada; the Cordilleran Region, extending along the entire west coast of the Continent; the Atlantic Coastal Plain along the eastern seaboard of the United States; and the Innuitian Region, a mountainous belt in the Arctic Archipelago. Canada includes parts of four of these regions and all of the Innuitian Region, but none of the Atlantic Coastal Plain.

The Canadian Shield, embracing about one half of the total area of Canada, is a roughly horseshoe or shield shaped terrain of some 1,850,000 sq. miles, having Hudson Bay at its approximate centre. The Shield continues into the United States west and south of Lake Superior, and east of the upper St. Lawrence River where a belt of resistant rocks called the Frontenac Axis forms the Thousand Islands and, to the south, broadens to form the Adirondack area. Far back in geological time the Shield contained many ranges of high mountains but these have been mainly worn down to a surface of moderate relief consisting of hills, ridges and valleys containing innumerable lakes and streams. Most of the surface is from 600 to 1,200 feet above sea level but higher uplands form such well-known features as the Laurentian Mountains north of Montreal and the Haliburton Highlands in southeastern Ontario. Along the coast of Labrador and in Baffin Island are mountains rising 5,200 and 8,500 feet, respectively, above the sea. The Shield is a complex assemblage of Precambrian rocks that, as a whole, represent at least five sixths of the long duration of geological time. Most of the rocks have been subjected to more than one and in some cases several periods of orogeny, resulting in intricate structures, intense metamorphism, widespread igneous intrusions, and alteration of much ancient sedimentary rock to granite and related material. These complexities combined with the absence of fossils, which facilitate the correlation of strata younger than Precambrian, hamper interpretation of the geology of the Shield. Nevertheless, progress has been made and methods developed in Canada have been applied to Precambrian shields of other continents.

Flanking the Shield are large expanses of plains and lowlands underlain by relatively young and soft rocks overlain in many places by good agricultural soils. A notable characteristic of the boundary between the Shield and the Lowlands is the presence of large lakes that lie partly in rock basins in the Shield and partly in depressions in the younger strata. The most prominent are Great Bear Lake, Great Slave Lake, Lake Athabasca, Lake Winnipeg and Lake Huron. The largest lowland area is that of the Interior Plains, sometimes called the Great Plains or Western Interior Lowlands. These constitute the prairies of Western Canada and their wooded continuation to the north. The Northern Interior Lowlands include the Hudson Bay Lowlands south of Hudson Bay, the Foxe Basin Lowlands in and near western Baffin Island, and the Southern Archipelago Lowlands which occupy large parts of the more southerly Arctic islands. The Arctic Coastal Plain bordering the Arctic Ocean is sometimes classed as a separate physiographic region comparable to the Atlantic Coastal Plain but is here grouped with the other plains and lowlands for simplicity. The Great Lakes-St. Lawrence Lowlands form two important agricultural and industrial areas in southern Ontario, separated by the Frontenac Axis; the more easterly continues in Quebec, on both sides of the St. Lawrence River, and an isolated continuation forms Anticosti Island. Sedimentary strata of Palæozoic and younger ages overlap the Shield to form the Plains and Lowlands. These strata once covered much more of the Shield before being removed by erosion. The Shield continues under the Plains, as is proved by numerous wells drilled for oil or gas in the Great Plains and in southern Ontario having been

bottomed in typical Shield rocks, but it is customary to regard the Canadian Shield Region as the part that is exposed or covered by glacial deposits. The overlying strata are undisturbed or gently tilted or flexed, the Shield and the Plains and Lowlands together forming a central continental region that has been relatively stable since Precambrian time, while orogenies were active in the flanking geosynclinal belts now indicated by the Appalachian, Cordilleran and Innuitian mountains.

The Canadian Cordilleran Region is a northwesterly-trending belt about 500 miles wide composed of high mountains and lower plateaux and valleys. It comprises southwestern Alberta, all of British Columbia except its northeastern corner, almost all of Yukon Territory and the southwestern part of the Northwest Territories. The individual mountain groups and plateaux are arranged in a complex pattern divisible into three parallel northwesterly-trending zones; in most places these zones are quite distinct and are called the Western, Interior and Eastern Systems. The greater part of the Western System is composed of the high, rugged Coast Mountains along the mainland coast of British Columbia. Along part of the Yukon-Alaska boundary they are flanked to the southwest by the still higher St. Elias Mountains. Separated from the mainland by the Insular Passage are ranges forming Vancouver and Queen Charlotte Islands. The Interior System is a complex group of plateaux and mountains. The Eastern System is divided into the Northern Ranges and the Rocky Mountains, separated by a plain and plateau along the Liard River near the British Columbia-Yukon boundary. The main features of the Northern Ranges are the British and Richardson Mountains near the Arctic Coast, and the Mackenzie and Franklin Mountains in the western part of the Northwest Territories. The Rockies are composed of high, serrated ranges extending northward from the 49th Parallel; the elevation of the highest peak, Mount Robson, is 12,972 feet. Flanking them on the east are the Rocky Mountain Foothills which form a transition with the Plains. Because the Rocky Mountains, although extensive, are but a relatively small part of the mountains of Western Canada, the popular tendency to apply the name to the entire Canadian Cordillera is inadmissible.

The Cordillera are on the site of a great geosyncline where sediments were laid down at least as early as late Precambrian time, where marine sedimentation continued in places as late as the Upper Cretaceous, and where freshwater sediments were deposited locally during the Tertiary. The principal mountain-building and igneous processes of which good evidences remain began locally in early Mesozoic time, culminated in the western Cordillera in the Nevadan orogeny in late Jurassic and early Cretaceous time, but was not significant in the eastern Cordillera until the Laramide orogeny early in the Tertiary. Thus the western Cordillera were formed much earlier than the eastern, were largely worn down by erosion by the time the Rockies and other eastern mountains were built, and the western part of the region was uplifted at the time of the Laramide orogeny so that renewed erosion could carve the surface into the present mountains and plateaux. The strata in the western Cordillera are intruded by many bodies of igneous rocks, from small to very large in size. Most are granodiorite or diorite but many others are granite, gabbro or other related types: still others are ultrabasic, i.e., composed mainly of iron and magnesium minerals. Most are related to the Nevadan orogeny but some must have been intruded in late Cretaceous or early Tertiary time, and there is incomplete evidence that some are of ages from late Precambrian to Triassic. The intrusions are scattered widely, the largest concentration being the Coast Range Intrusions which form the greater part of the Coast Mountains. Intrusive rocks are rarely exposed in the eastern Cordillera, probably because the mountains there have not been eroded sufficiently to reveal many.

The Appalachian Region is the northern continuation of a long belt of folded strata extending along the eastern side of the United States. It is on the site of a geosyncline that existed mainly in Palaeozoic time in which great thicknesses of sedimentary and volcanic strata were laid down. The northwestern boundary of the region is a long curving fault or zone of faults which extends from Lake Champlain at least as far as the Gulf of St. Lawrence and which causes the curved shape of the northern coast of Gaspe. The strata in the Appalachians have been folded and faulted by successive periods of orogeny along axes that strike northeasterly; thus strata of different kinds and ages and belts of intrusive rocks form northeasterly-trending bands, many of which are responsible for the peninsulas, bays and ridges of the region. Three principal periods of orogeny—the Taconic, the Acadian and the Appalachian—have been recognized. The Taconic occurred at the close of the Ordovician, the Acadian during the Devonian, and the Appalachian at the close of the Palaeozoic. In Canada the Taconic disturbances were fairly widespread, the Acadian were more so, affecting areas that were previously affected by the Taconic and areas that were not, but the Appalachian orogeny, which was a major feature in parts of the United States, was of minor and local importance.

The Innuitian Region is underlain by moderately-to-intensely folded sedimentary, volcanic and metamorphic rocks of various ages, the oldest being probably Proterozoic and the youngest being Tertiary. Folding occurred at different times and in different directions, some in early Devonian time, some late in the Palaeozoic era, and some in Tertiary time. Five fold-belts have been recognized—Cornwallis, Parry Islands, Central Ellesmere, Northern Ellesmere and Eureka Sound. Granitic intrusions have been found in the Northern Ellesmere belt.

Brief sketches of the geological regions together with an outline of geological processes are given in the 1961 Year Book at pp. 1-14. Further information is supplied by *Geology and Economic Minerals of Canada* (\$2, including Map 1045A) and *Prospecting in Canada*; the latter also contains chapters on the principles of geology and on minerals and rocks. The *Geological Map of Canada* (1045A, 50 cents) and *Canada, Principal Mining Areas* (900A) are also recommended. Map 900A is revised annually; one copy is sent free to residents of Canada and additional copies are 25 cents each. These publications may be ordered from the Director, Geological Survey of Canada, together with lists of reports and maps of the Geological Survey of Canada on specific topics and areas, for each province. Other publications are available from provincial departments of mines.

Section 3.—Federal Government Surveying and Mapping*

In Canada, the needs for maps and technical surveys are met largely by the Department of Mines and Technical Surveys. Although not all branches of this Department make surveys and compile maps, most of them are involved in such work either wholly or partly. They compile topographical, geological and aeromagnetic maps, aeronautical and hydrographic charts, electoral and boundary maps, land-use maps, and other special maps. The basis for these maps is provided by geodetic and other control surveys.

The Department is an engineering and research complex. It has a staff of about 4,000, of whom 1,000 are scientists and engineers, and 1,300 are technicians. Each year,

* Prepared by H. G. Classen, Special Projects Section, Editorial and Information Division, Department of Mines and Technical Surveys, Ottawa.

some 1,500 men are sent into the field to make surveys and to carry out research, the results of which are ultimately published in the form of maps, charts and reports.

The Department's branches engaged in technical surveys are the Surveys and Mapping Branch, which carries out geodetic and topographic surveys and produces base maps, electoral and other special maps and aeronautical charts; the Marine Sciences Branch, which produces hydrographic charts of Canada's sea coasts and inland waters; the Geological Survey of Canada, which maps geological features; the Observatories Branch, which produces geophysical maps; and the Geographical Branch, which produces a number of special maps.

The surveys and maps produced by the Department are the result partly of long-range plans based on general national needs and partly of requests from private enterprise and other government agencies. To avoid duplication, the Department co-ordinates its work with provincial and private mapping organizations. Hydrographic and aeronautical charts, however, are produced exclusively by the Department.

The methods and techniques used by the surveyors and map-makers must frequently be adapted to the peculiarities of the Canadian geography, which are, above all, great distance and, over most of the country, a harsh climate. Of inestimable help in overcoming these difficulties have been the aeroplane, the helicopter and electronic distance-measuring devices such as the geodimeter, the tellurometer and the aerodist. Together with photogrammetry (i.e., plotting of maps from air photographs) these techniques make it possible for field parties to map relatively large areas accurately without ever setting foot in them. In a trial project in 1963, for example, a topographical party in northwestern Ontario, using the aerodist, established survey control for 37,000 sq. miles of territory on a scale of 1:50,000 in seven and a half days. By conventional methods, such a project would have taken several years to complete in this difficult terrain.

Small fixed-wing aeroplanes and helicopters play a large role in transporting survey parties from point to point in areas where no other means of transportation exists, so that most of the time formerly lost in slow and laborious progress by pack-horse or canoe can now be used for actual survey work, be it topographical, geological or geophysical. The helicopter is also used to advantage in hydrographic surveying. The two largest ships of the Marine Sciences Branch have helicopters based on them, and depth-sounding in the ice-infested waters of the Arctic has been made easier by the use of echo-sounders towed by helicopters.

In geological mapping, older reconnaissance methods have been supplemented by such novel investigations as geochemistry and biogeochemistry, in which minute quantities of minerals found in the surface soil, in creeks and in vegetation are analysed to map out major mineral deposits. In geophysics, the airborne magnetometer, the various adaptations of the gravimeter for measurements at sea and on the ice, the study of palaeomagnetism and similar advances have helped to speed up and to make more accurate the mapping of features below the earth's surface and have also brought new areas and new depths within the range of knowledge.

In the drafting and printing of the maps, highly advanced techniques for the automatic transfer of terrain features from air photos to drafting sheets and precise lithographing have been combined to assure speedy processing of field data and the production of colourful, easily understood and relatively inexpensive maps for every type of user, from vacationer to town planner and from prospector to pilot. The large modern printing plant of the Surveys and Mapping Branch also prints maps compiled by the other Branches of the Department as well as maps of other government departments and agencies. The Branch has a stock of almost 12,000,000 maps available, from which it distributes over 1,000,000 annually. Each year the Geological Survey distributes about 350,000 maps and reports, the Marine Sciences Branch distributes about 250,000 charts, and other Branches distribute large numbers of their own maps and charts.

In the field of geodetic surveys, the Department maintains and extends a network of horizontal and vertical control points across Canada. The Geodetic Survey is working on the extension of precise control in the north, and the greater density in the south. Its ultimate aim is to have horizontal and vertical control points no farther apart than 20 miles.

The Topographical Survey is pressing ahead with the topographical mapping of the country at the medium scale of 1:250,000 or about four miles to the inch, which it hopes to have completed in 1967. Nearly 700 of the 925 maps planned are available. It is also producing maps at larger scales, particularly of densely settled areas and for resource development.

The Department carries out legal surveys on Crown lands, such as the two northern territories, National Parks and Indian reserves, and produces the requisite plans. It is also responsible for the preparation of descriptions and diagrams of federal electoral districts, and co-operates with the provinces in the survey and demarcation of inter-provincial boundaries. The survey of the northern boundaries of British Columbia and the Prairie Provinces, for example, started in 1899 and was completed in 1963. The Department also contains the Canadian section of the International Boundary Commission; the Canadian Commissioner and his staff look after the maintenance of international boundary monuments and the boundary vista, and maintain a set of maps and survey records.

Another active field of mapping is the production of aeronautical charts, which are used by aircraft pilots, and show airports, airways and all the radio and other aids necessary for air navigation.

As a service to map-makers and others interested in that field, the Department maintains the National Air Photo Library, a collection of all air photographs taken by or for the Federal Government.

To carry out its hydrographic and oceanographic surveys, the Department has a fleet of ships and launches. Five vessels are based at the Bedford Institute of Oceanography at Dartmouth, N.S., and four at Victoria, B.C. Twelve more ships are planned to cope with the continuing increase in the already high demand for marine charts and information.

The Geological Survey each year places about 100 parties in the field, about half of whom are engaged in reconnaissance mapping. Geological surveys are carried out chiefly to provide an inventory of the potential mineral resources of Canada, to aid in the discovery of mineral deposits, and to help in other aspects of the national economy that are influenced by geological factors. Geologists have mapped about 70 p.c. of the country at scales no smaller than eight miles to the inch.

Both the Geological Survey and the Observatories Branch carry out geophysical surveys.* The geologists use geophysical methods, such as aeromagnetic, seismic and gravity measurements, as an aid in outlining geological features. The geophysicists of the Observatories Branch are concerned with fundamental features, independently of their immediate geological interest. They publish gravity maps at a scale of 1:500,000 and sets of charts of geomagnetism at 100 miles to the inch, and maintain a network of 19 permanent seismological observatories to produce earthquake-probability maps and other studies of the relationship between the structure of the earth and the propagation of seismic shock waves.

In the field of geographical mapping, the Department's geographers produce special maps showing land use; they survey land forms in the Arctic, where ice formation produces surface dislocations found in few other areas; and they also act as the executive arm of the Canadian Permanent Committee on Geographical Names.

* See also Chapter VIII, Sect. 4.

PART II.—PUBLIC LANDS, WILDLIFE AND FLORA

Section 1.—Federal and Provincial Public Lands

In Table 1 classifying the area of Canada by tenure, items 2, 3, 4 and 5 are obtained from Federal Government sources and items 1, 6, 7 and 8 from provincial government sources.

1.—Total Area classified by Tenure (circa) 1964

8. Provincial forest reserves.....	5,177 ⁸	119,407	9,267	45,125	—	186,977
Totals.....	251,000⁹	251,700	255,285	366,255	1,511,979	3,851,809⁹

¹ Includes Gatineau Park (97 sq. miles) and Quebec Battlefields Park (0.36 sq. mile) which are under federal jurisdiction but are not technically National Parks. ² Less than one square mile. ³ Sect. 46 of the Crown Timber Act which authorized Provincial Forest Reserves was repealed Mar. 25, 1964; all such lands are included in Item 6.

⁴ Includes 952,849 sq. miles set aside by Order in Council as native game preserves in which only Indians and Eskimos may hunt, but which are not regarded as National Parks. ⁵ Includes that part of Wood Buffalo Park in Alberta (13,675 sq. miles); this park, although established under the National Parks Act, is administered by the Northern Administration Branch, Department of Northern Affairs and National Resources.

⁶ That part of Wood Buffalo Park in N.W.T. ⁷ This forest experiment area of 25 sq. miles is also included in National Parks figure. ⁸ Includes 1,945 sq. miles of provincial park land within provincial forest reserves. ⁹ Does not add because of duplications; see footnotes concerned.

Federal Public Lands.—Public lands under the administration of the Federal Government comprise lands in the Northwest Territories including the Arctic Archipelago and the islands in Hudson Strait, Hudson Bay and James Bay, lands in Yukon Territory, Ordnance and Admiralty Lands, National Parks and National Historic Parks and Sites, Forest Experiment Stations, Experimental Farms, Indian reserves and, in general, all public lands held by the several departments of the Federal Government for various purposes connected with federal administration (see Table 1). These lands are administered under the Territorial Lands Act (RSC 1952, c. 263) and the Public Lands Grants Act (RSC 1952, c. 224) which became effective June 1, 1950 and replaced previous legislation.

The largest areas under federal jurisdiction are in the Northwest Territories and Yukon Territory where only 85 sq. miles of a total area of 1,511,979 sq. miles are privately owned. This part of the national domain, with the exception of the islands in Hudson Bay and James Bay, is all north of the 60th parallel of latitude and occupies about 40 p.c. of the surface of Canada. It is under the administration of the Northern Administration Branch of the Department of Northern Affairs and National Resources.

Provincial Public Lands.—Public lands of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia (except the Railway Belt and Peace River Block) have been administered since Confederation by the provincial governments. In 1930 the Federal Government transferred the unalienated portions of the natural resources of Manitoba, Saskatchewan and Alberta and of sections of British Columbia to the respective governments, and all unalienated lands in the Province of Newfoundland, except those administered by the Federal Government, became provincial public lands under the Terms of Union on Mar. 31, 1949. All land in the Province of Prince Edward Island has been alienated except 126 sq. miles under federal or provincial administration.

Information regarding provincial public lands may be obtained from the respective provinces. (See the Directory of Sources of Official Information, Chapter XXVII, under "Lands and Land Settlement".)

Subsection 1.—National Parks

The National Park concept—the preservation of significant areas in their natural state for the benefit and enjoyment of the public—was developed in North America, and Canada has the second largest number of National Parks and National Historic Parks in the world.

The Canadian system dates from 1885. In that year a 10-sq. mile reserve was established by the Federal Government around the mineral hot springs of Sulphur Mountain at Banff in Alberta and in the following year two spectacular areas in southern British Columbia were set aside as parks. The first National Park was formally established in 1887 by Act of Parliament. By 1930, the National Park system comprised a number of natural and wildlife reserves in Western Canada, three small areas in Ontario, and two small areas in the Atlantic Provinces. Since 1935, four park areas have been added, one in each of the Atlantic Provinces, bringing the total number across the country to 18 and the total area to 29,275 sq. miles.

These Parks are administered by the Natural and Historic Resources Branch of the Department of Northern Affairs and National Resources. According to the National Parks Act of 1930, the Parks are to be preserved for the "benefit, education and enjoyment of the people of Canada" and are to be maintained and used "so as to leave them unimpaired for the enjoyment of future generations". Thus, these areas fulfil their intended function of preserving many unique examples of Canadian scenery, magnificent forests, and varied kinds of plant and animal life. To enable the public to make maximum use of this park heritage, campgrounds, roads, trails, picnic areas, beaches, recreational facilities and, at some parks, golf courses and bathing establishments are provided by the Branch, and motels, hotels, lodges and other visitor services are provided by private enterprise on

land leased from the Federal Government. A relatively new service is extended to park visitors by professional park naturalists who conduct a natural history interpretation program. Each park is in charge of a superintendent and park wardens are on duty to protect the recreational areas, the wildlife and the forests from fire and other destructive forces, and to look after the safety of visitors.

While the National Parks preserve natural features of national importance, National Historic Parks and Sites preserve and identify the places important in the history of Canada. A site is declared of national historical significance by the Minister of Northern Affairs and National Resources on the recommendation of the Historic Sites and Monuments Board of Canada, an advisory board of historians representing all provinces. The National Historic Parks are military or fur-trading forts that have been preserved, historic buildings or reconstruction of historic buildings; most have museums associated with them. There are 594 historic monuments or plaques commemorating personages or events and 19 National Historic Parks, 15 major National Historic Sites operated by the Branch and nine major National Historic Sites leased to local bodies to operate.

2.—Location, Year Established, Area and Characteristics of National Parks and of National Historic Parks and Sites

Park	Location	Year Estab- lished	Area	Characteristics
			sq. miles	
National Parks				
Terra Nova.....	On Bonavista Bay, New- foundland, 205 miles north of St. John's.	1957	153.0	Rocky headlands, wooded interior areas, off-shore and freshwater fishing. Serv- iced campground and cabin accommoda- tion.
Prince Edward Island..	North shore of Prince Edward Island.	1937	7.0	Strip 25 miles long on shores of the Gulf of St. Lawrence. Fine bathing beaches. Hotel and cabin accommodation. Serv- iced campgrounds.
Cape Breton Highlands.	Northern part of Cape Breton Island, N.S.	1936	367.0	Rugged Atlantic coastline with mountain- ous background. Fine seascapes. Hotel and cabin accommodation. Serviced campgrounds.
Fundy.....	On Bay of Fundy between Moncton and Saint John in New Brunswick.	1948	79.5	Interesting rock formations on coast and rolling hills inland. Campground and cabin accommodation. Excellent natu- ralist service.
Georgian Bay Islands..	In Georgian Bay, 3 miles by water from Honey Harbour, Ont.	1929	5.4	Camping, canoeing, hiking, swimming, fishing and boating opportunities. Un- usual geological formations on Flowerpot Island, off Tobermory on Midland Penin- sula. Accessible by boat only.
Point Pelee.....	On Lake Erie near Lea- mington, in south west- ern Ontario.	1918	6.0	Most southerly part of Canadian mainland. Fine bathing beaches. Unusual flora. Resting place for migrating birds. Campgrounds.
St. Lawrence Islands...	In St. Lawrence River be- tween Brockville and Kingston, Ont.	1914	260.0 (acres)	Mainland area and 14 islands with docks, campgrounds and picnic areas. Repre- sentative selection of the Thousand Islands. Islands accessible by boat only.
Riding Mountain.....	Southwestern Manitoba, west of Lake Winnipeg.	1929	1,148.0	Woodland escarpment with fine lakes. Fishing, swimming, trail-riding, hiking and golfing. Visitor services in Wasaga- ming townsites. Campgrounds.
Prince Albert.....	Central Saskatchewan, north of Prince Albert.	1927	1,496.0	Forested region dotted with lakes and interlaced with streams. Fishing, swim- ming, boating and golfing. Marina. Variety of visitor services at Waskesiu townsite.

2.—Location, Year Established, Area and Characteristics of National Parks and of National Historic Parks and Sites—continued

Park	Location	Year Estab- lished	Area	Characteristics
			sq. miles	
National Parks— concluded				
Banff.....	Western Alberta, on east slope of Rockies, 65 miles from Calgary.	1885	2,564.0	Best known and most popular of the National Parks. Magnificent scenery. Mineral hot springs. Resort facilities at Banff and Lake Louise. Skiing developments at Mount Norquay, Mount Whitehorn, Sunshine, Skoki and Temple. On Trans-Canada Highway.
Elk Island.....	Central Alberta, near Edmonton.	1913	75.0	Fenced preserve containing large herd of buffalo; also deer, elk and moose. Popular picnic and day-use area. Cabin accommodation and serviced campground.
Jasper.....	Western Alberta, on east slope of Rockies, 235 miles from Edmonton.	1907	4,200.0	Mountainous area and noted wildlife sanctuary. Majestic peaks, icefields, beautiful lakes and famous resort, Jasper. Mineral hot springs. Connected with Banff by scenic Banff-Jasper Highway. Accessible also by rail. Hotel and cabin accommodation and campgrounds.
Waterton Lakes.....	Southern Alberta, adjoining Glacier Park in Montana, U.S.A.	1895	203.0	Canadian section, Waterton-Glacier International Peace Park. Mountainous area with spectacular parks and beautiful lakes. Accessible by highway. Hotel and cabin accommodation. Serviced and unserviced campgrounds.
Glacier.....	Southeastern British Columbia, on summit of the Selkirk Range.	1886	521.0	Superb alpine region, towering peaks, glaciers and forests. Climbing, hiking and camping. On Trans-Canada Highway. Visitor services at Rogers Pass.
Kootenay.....	Southeastern British Columbia, on west slope of Rockies.	1920	543.0	Includes Vermilion-Sinclair section of Banff-Windermere Highway. Broad valleys, deep canyons, mineral hot springs. Hotel and cabin accommodation. Serviced and unserviced campgrounds.
Mount Revelstoke.....	Southeastern British Columbia, on west slope of Selkirks.	1914	100.0	Mountain-top plateau with rolling alpine meadow and picturesque tarns. No public access by vehicle to summit pending completion of road reconstruction.
Yoho.....	Eastern British Columbia, on west slope of Rockies.	1886	507.0	Lofty peaks, magnificent waterfalls, colourful lakes. Yoho and Kicking Horse Valleys. Accessible by rail and highway. Hotel and cabin accommodation. Serviced and unserviced campgrounds.
Wood Buffalo ¹	Partly in Alberta, and partly in Northwest Territories, between Athabasca and Slave Rivers.	1922	17,300.0	Largest National Park in world. Home of largest remaining herds of plains and wood bison and nesting ground of whooping crane. Accommodation at and access by boat and aircraft from Fort Smith, N.W.T.
National Historic Parks				
			acres	
Signal Hill.....	St. John's, Nfld.....	1958	243.4	Site of 1762 battle between French and British and of many fortifications. Marconi made first transatlantic wireless transmission here in 1901.
Fort Amherst.....	Prince Edward Island, near Rocky Point.	²	222.0	Remaining earthworks of British fort built after 1758.

For footnotes, see end of table, p. 25.

Fort Anne.....	Annapolis Royal, N.S.....	1917	31.0	Site of French fort first built about 1635, finally captured and occupied by British in 1710. Museum and well-preserved earthworks.
Fortress of Louisbourg.....	Cape Breton Island, N.S., 25 miles from Sydney.	1940	13,000.0	Walled town built by French 1713-58 and demolished by British 1759. Being partially reconstructed. Archaeological investigations in progress.
Halifax Citadel.....	Halifax, N.S.....	1951	20.0	Fortress constructed in 1820's and in 1850's. Museum.
Port Royal.....	Port Royal, N.S., 8 miles from Annapolis Royal.	1940	20.5	Reconstruction of "Habitation"—first fort built in 1605 by Champlain and DeMonts.
Alexander Graham Bell	Baddeck, N.S.....	2	21.0	Museum containing mechanical and documentary records of research by the inventor.
Grand Pré.....	Grand Pré, N.S.....	1957	20.0	Commemorates the story of the Acadians and the New England Planters. Museum.
Fort Beauséjour.....	New Brunswick, near Sackville.	1926	93.0	Site of French fort erected in mid-1700's. Museum.
Fort Chambly.....	Chambly, Que.....	1940	2.5	Fort built by English in 1709-11. Museum.
Fort Lennox.....	Île aux Noix, Que., near St. Paul.	1940	210.0	Fort built by English in 1820's.
Fort Malden.....	Amherstburg, Ont.....	1940	10.0	Site of defence post built in 1797-99. Museums.
Fort Wellington.....	Prescott, Ont.....	1940	12.0	Military garrison 1812-66.
Woodside.....	Kitchener, Ont.....	1954	12.0	Boyhood home of the Rt. Hon. William Lyon Mackenzie King, former Prime Minister of Canada.
Fort Prince of Wales...	Northern Manitoba, near Churchill.	1940	50.0	Ruins of fort built 1733-71 to secure control of Hudson Bay for England.
Lower Fort Garry.....	Manitoba, 20 miles north of Winnipeg.	1951	13.0	Stone-walled fort built by the Hudson's Bay Company between 1831 and 1839.
Fort Battleford.....	Saskatchewan, 4 miles south of North Battle- ford.	1951	36.7	North West Mounted Police post built in 1876. Museum.
Fort Langley.....	Fort Langley, B.C.....	2	11.0	Partially restored trading post founded 1827. Colony of British Columbia proclaimed here 1858.
Fort Rodd Hill.....	Esquimalt, B.C.....	1962	44.4	Extensive 19th century stone and concrete coastal fortifications.
Major National Historic Sites				
George Island.....	Halifax, N.S.....	2	12.5	Preserved harbour fortifications built in 1870's.
York Redoubt.....	Halifax, N.S.....	2	187.5	Perimeter Harbour Defence 1778-1945.
Fort Gaspereau.....	Near Port Elgin, N.B.....	2	2.0	Site of 1751 French Fort.
St. Andrews Blockhouse	St. Andrews, N.B.....	1938	2.5	Built during War of 1812.

For footnote, see end of table.

¹ Sites for which visitor data are available.

Subsection 2.—Provincial Parks

Most of the provincial governments of Canada have established parks within their boundaries. Some of these, particularly in Quebec and Ontario, are wilderness areas set aside in order that some portions of the country might be retained in their natural state without change brought about by the hand of man. Most of them, however, are smaller areas of exceptional scenic or other interest which are easily accessible and are equipped or slated for future development as recreational parks with camping and picnic facilities. The more important parks in each province are mentioned briefly in the following paragraphs.

Newfoundland.—There are 78.5 sq. miles of provincial parkland reservations in Newfoundland. Of the total area, 26 sq. miles are at present utilized for public recreation and the remaining 52.5 sq. miles are as yet undeveloped. The active parkland consists of three regional parks, each having an area of about 8 sq. miles, and 18 roadside parks with camping and picnicking facilities, each having an area of about 100 acres.

Prince Edward Island.—Eighteen areas totalling 250 acres have been developed as provincial parks: Strathgartney Park, a 40-acre tract of land at Churchill on the Trans-Canada Highway between Charlottetown and Borden, is an excellent picnic site and camping ground with its hardwood groves, fresh spring water and beautiful view over West River and the surrounding country; Lord Selkirk Park, an area of 30 acres at Eldon, is of historic interest in that it contains an old French cemetery and marks the spot on the shoreline where Lord Selkirk landed; Brudenell River Park, comprising 80 acres at Roseneath, has a considerable area of woodland and runs to the shore of the Brudenell River;

Jacques Cartier Park, an area of 13 acres under development at Kildare Beach four miles from Alberton, is of historic significance as the place where Jacques Cartier first landed on Prince Edward Island; Green Park, 27 acres of land under development on the Trout River, is an attractive combination of land, trees and water and is also of interest as a historic shipbuilding centre. Several small parks have been developed or are under development. The parks are maintained by the Department of Tourist Development. A fee of \$1 a night is charged for trailer space and of 75 cents a night for tent space in all provincial parks.

Nova Scotia.—A master plan has been prepared of theoretically desirable park locations in Nova Scotia, taking into consideration the need for roadside facilities, regional picnic parks and camping grounds. Geographic location, population density, volume of traffic and aesthetic features are being evaluated for each site. Roadside table sites, formerly administered by the Department of Highways, are being incorporated into this provincial scheme and will be operated according to provincial park standards. Many of the existing sites will be retained and improved, some will be retained on a temporary basis only and unsuitable sites will be discontinued. The provincial parks program will require about ten years of development work for completion.

In 1965, the Department of Lands and Forests anticipates that 10 camping and picnic parks, 27 picnic parks and 23 roadside table sites will be in operation throughout the province.

New Brunswick.—The Department of Lands and Mines is responsible for the development of the Provincial Parks System, which includes 15 regional park sites ranging in size from 25 to 200 acres, 17 picnic campsites and 23 roadside picnic sites. All picnic and camping grounds contain tables, some form of toilet facility and a potable water supply but more elaborate facilities are available in the larger parks. Many of the regional park sites are associated with beach developments. Most sites are adjacent to or easily accessible from main trunk roads. No entrance fee is charged at any of the sites, but a daily camping fee of \$1.00 to \$1.50 is in effect at 16 of the larger parks and campsites.

The Department maintains a Game Farm at Magnetic Hill near Moncton where various species of wildlife to be found in the province are displayed.

Quebec.—The Province of Quebec has established six provincial parks and 16 fish and game reserves. Four of the park areas are quite extensive. La Vérendrye Park, 140 miles northwest of Montreal, has an area of 4,953 sq. miles; Laurentide Park, 30 miles north of Quebec City, is 3,613 sq. miles in extent; Mont Tremblant Park, 80 miles north of Montreal, 1,223 sq. miles; and Gaspesian Park, in the Gaspé Peninsula, 514 sq. miles. Mont Orford Park, situated 15 miles west of Sherbrooke, has an area of 16 sq. miles and Oka Provincial Park near Oka, 1.5 sq. miles.

Fish and Game Reserves together occupy 41,166 sq. miles.* The Chibougamau Reserve, the Mistassini Reserve and the Assinica Reserve, all northwest of Lake St. John, have areas of 3,400, 5,200 and 3,850 sq. miles, respectively, and farther north is the James Bay Reserve with an area of 25,000 sq. miles. The Aiguebelle Reserve in Abitibi County has an area of 100 sq. miles, the Baie Comeau and Chicoutimi Reserves in the Lake St. John area, 480 and 678 sq. miles, respectively, and the Kipawa Reserve in Témiscamingue County, 1,000 sq. miles. Adjoining Gaspesian Park in the Gaspé Peninsula, the Chic-Chocs, Matane and Joffre Reserves have, respectively, 325, 450 and 40 sq. miles. Also in Gaspé Peninsula are the Port Daniel, Rivière St. Jean and Rivière Petite Cascapédia Reserves for salmon and trout fishing, occupying 20, 13 and 300 sq. miles, respectively. Horton Reserve in Rimouski County has an area of 310 sq. miles.

*Excluded are the 16,000 sq. miles of the Mingan Reserve, no longer operated by the Department of Tourism, Game and Fish as a reserve.

These parks and reserves are wilderness areas of great scenic interest and are for the most part mountainous country threaded with many rivers, lakes and streams and abounding in wildlife. In all of them, except Mont Orford Park and Oka Provincial Park, excellent fishing may be found and most of them have been organized to accommodate sportsmen and tourists in camps, cottages and lodges. Mont Tremblant Park, located close to a famous year-round recreational area, is easily reached in summer by highway from Montreal and is very popular for tent or trailer camping and for swimming and picnicking. Mont Orford has an 18-hole golf course and, in winter, is the rendezvous of Canadian and United States skiers and the site of the Canadian Alpine downhill and slalom championship competitions. Hunting is forbidden in the parks and reserves, except Horton, Joffre, Kipawa and James Bay. In recent years, controlled moose hunting in Laurentide, La Vérendrye and Matane Parks has been allowed to remove the surplus.

In addition to these large parks, the Province of Quebec is in process of establishing a network of roadside parks. It is estimated that \$4,000,000 will be spent for this purpose during the fiscal year 1965-66.

Ontario.—The development of provincial parklands in Ontario continues at a rapid rate. Ten years ago there were 10 provincial parks in the province and today there are 90 such parks available for public use. Several new parks are in process of development and 54 other areas are reserved for future development. The total area in the Ontario Provincial Parks system is about 5,800 sq. miles.

The four largest provincial parks—Algonquin, Quetico, Lake Superior and Sibley—together have an area of about 5,200 sq. miles. Algonquin, 180 miles north of Toronto and 105 miles west of Ottawa, has several campgrounds which are accessible by car from Highway 60 and its numerous waterways may be traversed and enjoyed by canoe. Quetico Park is accessible by road at the Dawson Trail Campground on French Lake, and also by water via Basswood Lake in the south. Highway 17 north from Sault Ste. Marie provides access to Lake Superior Park, and Sibley Park may be reached by road from Highway 17 east from Port Arthur. Under the Wilderness Areas Act, which came into effect in 1959, 38 areas have been established. These tracts of land, widely distributed across the province, vary in size, character and significance but all are regarded as important for their historic, scientific, aesthetic or cultural values. The largest is a 225-sq. mile area of treeless tundra in the northeastern tip of the province, jutting out at the base of Hudson Bay where it meets James Bay. The second largest is a 220-sq. mile block covering the Puckasaw River valley between Wawa and Marathon on the north shore of Lake Superior. All the other areas are small and none exceeds 640 acres.

Ontario's vast lakeland areas make this province a vacation paradise and the number of park visitors increases year by year. Attendance reached an all-time high of 9,139,975 in 1964 and campers numbered 927,632. Charges for vehicle entry are \$1.00 a day or \$5.00 a year and camping charges are \$1.50 a night or \$9.00 a week. At supervised tent and trailer campsites, picnic tables, fireplaces, tested drinking water and washrooms are provided. Campsites, which are being added to at the rate of 500 to 2,000 a year, numbered 15,000 across the province in 1964 and in that year about 326,000 permits were issued for the use of them. Adding interest to the visitor's stay in provincial parks are the Naturalist Service and Interpretative Programs which include nature museums, outdoor exhibits, conducted trips, illustrated talks and labelled nature trails. Interpretative programs were conducted at 16 parks in 1964.

The parklands of Ontario are administered by the Parks Branch of the Department of Lands and Forests. Detailed information is contained in the booklet *Ontario Campsites, Roadside Parks and Recreation Areas*, issued by the Department of Tourism and Information, Parliament Buildings, Toronto.

Manitoba.—There are nine provincial parks in Manitoba with a total area of 2,854 sq. miles, of which 1,945 sq. miles are also within forest reserves. In addition, there are 40 provincial recreation areas which range in size from 2.5 acres to 2,000 acres and comprise a total area of 4,827.5 acres or 7.5 sq. miles. Along the main highways, 89 roadside parks

have been established; 48 of these are public campgrounds and the others are designed for picnic lunches and short rests for motor travellers. The park and recreation areas are administered by the Parks Branch of the Department of Mines and Natural Resources. There are 5,177 sq. miles designated and operated as forest reserves and in many cases forest reserve and provincial parklands are one and the same. Forest reserves are operated and managed by the Forest Management Branch and are protected by the Forest Protection Branch of the Department of Mines and Natural Resources.

Saskatchewan.—Saskatchewan has 14 Provincial Parks with a total area of 2,344 sq. miles. Cypress Hills, Duck Mountain, Greenwater Lake and Moose Mountain are operated as summer resorts with chalet, lodge, cabin and trailer accommodation as well as camp and picnic facilities. The other parks have trailer sites and camping, picnicking, boating and swimming facilities. Recreational activities include fishing, boating, swimming, golf, tennis, dancing, baseball, hiking, nature study, horseback riding, etc., and the parks are all well fitted with playground and beach equipment for children. In Cypress Hills Park, elk, antelope, deer, sharp-tailed grouse and beaver are present, and the streams have been stocked with brook and other trout. Heavy stands of tall, straight lodgepole-pine and white spruce provide a unique forest cover in this area. In Duck Mountain, Moose Mountain and Greenwater Lake Parks, moose, elk and bear appear variously, and deer and beaver are common to all, as well as several varieties of grouse and many species of water and smaller land birds. Spruce, poplar and white birch provide excellent cover for wildlife. Pickerel, pike and perch are prevalent in most of the lakes. Lake trout are ardently sought by fishermen in the northern lakes. Three wilderness parks—La Ronge, Nipawin and Meadow Lake—offer wilderness-style canoe routes and 'fly-in' commercially operated fishing and hunting camps. Many roadside picnic grounds are located throughout the province and several excellent Trans-Canada Highway campsites are in use.

Sites of historic interest are marked throughout the province and include the Touchwood Hills Hudson's Bay Post, where picnic facilities are available.

Alberta.—In Alberta, 42 provincial parks have been established, 39 of which, with a total area of approximately 168 sq. miles, are under development. Cypress Hills Provincial Park with an area of 78 sq. miles is the largest and is situated in the southeast portion of the province. Other parks under development are: Aspen Beach, Beauvais Lake, Big Hill Springs, Big Island, Big Knife, Bow Valley, Bragg Creek, Crimson Lake, Cross Lake, Dillberry Lake, Dinosaur, Entrance, Garner Lake, Gooseberry Lake, Hommy, Kinbrook Island, Lac Cardinal, Little Bow, Little Fish Lake, Long Lake, Ma-Me-O Beach, Miquelon Lake, Moonshine Lake, O'Brien, Park Lake, Pembina River, Red Lodge, Rochon Sands, Saskatoon Island, Taber, Thunder Lake, The Vermilion, Wabamun Lake, Williamson, Willow Creek, Winagami Lake, Woolford and Writing-on-Stone. These parks are generally provided with picnic, camping and playground facilities and are maintained by the Department of Lands and Forests primarily for the recreation and enjoyment of the residents of the province. There is a park within easy reach of almost every town. The most northerly park is Lac Cardinal, about 28 miles southwest of Peace River, and the southernmost park is Writing-on-Stone which adjoins the Alberta-Montana border. Alberta's provincial parks were visited by 2,102,000 tourists and vacationists in 1964.

In addition to the recreational parks, 21 sites have been established to mark and preserve locations of historic interest. They include: Athabasca Landing, Buckingham House, Coronation Boundary Marker, Early Man Site, Fort DeL'Isle, Fort George, Fort Vermilion, Fort Victoria, Fort White Earth, Frog Lake Massacre, Hay Lakes Telegraph Station, Massacre Butte, Ribstones, Standoff, Stephansson, Twelve Foot Davis, Shaw Woolen Mill, Rev. George McDougall's Death Site, Fort McLeod, Indian Stone Pile and St. Joseph Industrial School.

Provided also for Albertans are the Wilderness Provincial Park, which adjoins Jasper National Park in the north and extends along the British Columbia border, and two wilderness areas established under the Forest Reserves Act in 1961. The Wilderness Provincial Park has an area of 2,149 sq. miles, Siffleur Wilderness 159 sq. miles and White

Goat Wilderness 489 sq. miles. These areas have been set aside to preserve as far as possible the natural scene and are not subject to any development or provided with roads.

British Columbia.—There are 227 (170 developed) provincial parks in British Columbia with a total area of about 9,992 sq. miles. These parks are classified as A, B and C. Class A parks are reserved solely for recreational purposes; some are highly developed and others are wilderness areas. Class B parks are set aside primarily for recreation, but regulations permit other natural resource use where this is not in conflict with recreation. Class C parks are administered in detail by a Parks Board of local citizens, under the over-all jurisdiction of the Minister of the Department of Recreation and Conservation. British Columbia parks are in many stages of development and dedicated to a variety of recreational uses. There are immense wilderness areas such as Tweedsmuir Park and Wells Gray Park. Outstanding scenic and mountain reserves include Garibaldi, Mount Robson, Manning and Bowron Lakes Parks. The formal gardens of Peace Arch Park are a monument to the goodwill between Canada and the United States. Vancouver Island has a chain of small forested parks that have achieved tremendous popularity with tourists—the best known are Little Qualicum Falls, Miracle Beach and Goldstream. The famous gold town of Barkerville has been restored to become the first Provincial Historic Park. Eight marine parks with mooring facilities and campsites have been developed on the islands of the Straits of Georgia for the benefit of water-borne vacationists. The popularity of the province's parks, with their integrated campsites and picnic areas, is attested by the fact that about 4,000,000 persons visited them during 1963; about one quarter of the visitors were campers and the remainder day visitors. Records show that Mount Seymour, Cultus Lake and Alouette Lake Parks were the most popular.

Subsection 3.—Canada's National Capital*

Ottawa, the city selected by Queen Victoria in 1857 to be the seat of government for the Province of Canada in British North America, was designated the National Capital upon Confederation on July 1, 1867. The community had grown out of the military and construction camp that served as headquarters for the building of the Rideau Canal, a project carried out between 1826 and 1832 to establish a safe navigable waterway between Lake Ontario and the Ottawa River. The building of the Canal was the crowning achievement in the life of a distinguished British military engineer, Lieutenant-Colonel John By, R.E., who gave his name to the new settlement inhabited mainly by stone-masons and discharged soldiers. As time passed, Bytown prospered as a timber centre and was incorporated as a town in 1847. Then, on Dec. 18, 1854, the name of Bytown was changed to Ottawa and under that name the community was incorporated as a city on Jan. 1, 1855.

The city, situated in an area of great natural beauty and surrounded by waterways, has remained a self-governing municipality and, although throughout the years the Federal Government co-operated with the municipal authorities in the development of a system of driveways and parks, the city expanded without the benefit of a comprehensive plan. However, in 1950 a Master Plan was presented to the Government of Canada, designed to guide the development of the Capital's urban area over the following half-century and to protect the beauty of the surrounding National Capital Region. This Region originally covered 900 sq. miles but was increased in 1959 to 1,800 sq. miles—half in the Province of Ontario and half in the Province of Quebec. Although the successful implementation of the Plan is dependent upon the co-operation of the cities of Ottawa, Hull and Eastview and of about sixty other autonomous municipalities and the two provincial governments involved, the National Capital Plan is not officially recognized by the Governments of Ontario and Quebec.

The federal agency responsible for the planning of Canada's Capital is the National Capital Commission, created in 1959 to replace the Federal District Commission which, in turn, was the lineal descendant of the Ottawa Improvement Commission. The National

* Prepared in the Information and Historical Division, National Capital Commission, Ottawa.

Capital Commission, which reports to Parliament through the Minister of Public Works, is composed of twenty members appointed by the Governor in Council and representing each of Canada's ten provinces. It is headed by a chairman and a general manager and has a personnel of over 700, although this number fluctuates because of the seasonal character of a large part of the work involved. Six committees give advice and direction to the Commission: the *Executive Committee* consists of the chairman and vice-chairman of the Commission and three other members appointed by the Commission, one of whom is from the Province of Quebec; the *Land Committee*, composed of several experts in land evaluation, advises the Commission on matters of land purchases and property administration; the *Advisory Committee on Design*, comprising prominent Canadian architects, town planners and landscape architects, gives advice on the external appearance of government buildings, locations, site plans and landscape designs; the *Historical Advisory Committee* advises the Commission on matters of preservation, marking and interpretation of buildings and sites having historical significance within the National Capital Region; the *Information Advisory Committee* studies and considers the publicity and public relations programs of the Commission; and the *Gatineau Park Advisory Committee* is concerned with the administration and development of Gatineau Park.

The National Capital Plan, as conceived by the eminent French town planner, the late Jacques Gréber, was dedicated to those who gave their lives for Canada during the Second World War and has since constituted the Commission's planning guide for the Capital of Canada. In accordance with the first proposal of the Master Plan, the principle of "open space" is being applied, a policy beneficial to both residents and visitors. Part of this policy involves the restoration to their natural beauty of the shores of the waterways in and around Ottawa, a program evident in the work of the Commission at Rideau Falls Park opposite the City Hall and in the development of Vincent Massey Park in the heart of the city; the latter is a 75-acre park and playground extension to 50-acre Hog's Back Park at the foot of Hog's Back Falls. The Commission owns 40 miles of riverfront property in the National Capital and makes these attractive areas accessible to the public. On the Quebec side of the Ottawa River the Commission maintains two parks—the historically interesting Brébeuf Park and Jacques Cartier Park, both on the shores of the Ottawa River. There are at present 40 miles of wide landscaped roadways in Ottawa and Hull, and 30 miles of right-of-way have been acquired for future expansion. The Commission cares for the landscaping of 13 municipal parks in Ottawa-Hull, of which Strathcona Park in Sandy Hill district and Rockcliffe Park are the most extensive and attractive. The acquisition of land along both shores of the Ottawa and Rideau Rivers and the exceptionally wide rights-of-way for parkways have given Ottawa about 4,000 acres of open space.

The program of planned location of new government buildings has been under way for some time and excellent examples of planned sites for government structures now exist at Confederation Heights, at Tunney's Pasture and at the Printing Bureau site in Hull. Other areas, such as the large tract of already serviced land at Pincrest, are awaiting development. The grounds of more than 140 government buildings in the National Capital Region are cared for by the Commission, which also gives assistance to municipal projects that enhance the attractiveness of the area, such as the provision of land and landscaping for the 10-mile Queensway being built under a four-way partnership between the Federal Government, the National Capital Commission, the Province of Ontario and the City of Ottawa.

An important proposal of the Master Plan calls for the establishment of a Greenbelt around the National Capital, one of the main objectives of which is to restrain the tentacular and uneconomical growth of the city. There is also the aesthetic consideration that this belt of green open space and planned building sites will provide the beautified Capital with suitable approaches. The present semicircular Greenbelt on the Ontario side occupies some 41,000 acres of land and surrounds, to a depth of about two and one half miles, the urban zone at an average distance of nine miles from the Peace Tower. The Commission encourages agricultural activity within this area and at the same time reserves within its

boundaries certain tracts of land to be occupied by government buildings, public institutions and some types of industrial development such as research and experimentation establishments requiring considerable space to operate. There are many other factors that help make the NCC Greenbelt an ideal planning measure: it is an incentive for better urban land use and it favours the development of satellite communities in the National Capital Region.

The Commission has under way the large-scale program advocated in the Master Plan of removing railway trackage and yards from the urban area with the co-operation of the railway companies. The abandoned rights-of-way are destined to become roadways which will relieve traffic bottlenecks within the heart of the city; the Queensway, still under construction, runs on a former railway bed. This program, which is expected to be completed by 1967, involves the removal of 32 miles of track, the elimination of 72 railway crossings and the consequent acquisition of 449 acres of high-value land for redevelopment. The removal of most of the railway lines from the central parts of the Capital will allow the Commission as the agent of the Federal Government to redevelop key areas such as LeBreton Flats, the present Union Station sector and parts of Sussex Drive near the approaches to the new Macdonald-Cartier bridge.

The Master Plan also includes the establishment and development of the beautiful and impressive Gatineau Park, a 75,000-acre forest and lake area in the shape of a triangle stretching from its apex in the city of Hull northward for 35 miles into the Laurentian Hills. The National Capital Commission owns more than 64,000 acres of the projected area and the acquisition of private holdings is continuing. The 22 miles of parkway now traversing this area are to be extended deeper into the wilderness. Camping and picnic sites are being improved by the installation of drinking fountains, barbecues and outdoor ovens, and well-designed restrooms, and by the addition of fishing and swimming facilities. At Lac Philippe and Lac Lapêche, two of the four big lakes in Gatineau Park, the Commission has developed or is planning large-scale public recreation facilities with easy road access.

In addition to these major development projects, the National Capital Commission, through its Historical Advisory Committee, plans to conserve and mark historic buildings and sites as mementoes of the past. Such sites are carefully studied and their preservation and suitable identification is an important part of the over-all program.

Planning aid to municipalities in the National Capital Region is given in the form of grants in special circumstances and advice on establishing areas of subdivision control, preparation of basic plans and maps, master plans for communities and zoning legislation. This advice is available upon request and the Commission, having no planning powers, must seek to persuade rather than impose its proposals.

Estimated expenditures for Commission projects in the year ended Mar. 31, 1965 totalled \$29,217,000, which included \$7,111,000 for administration, operation and maintenance and \$22,106,000 for capital projects and assistance to municipalities.

Section 2.—Wildlife Resources and Conservation*

Wildlife in Canada is an important renewable natural resource. In the early days, wildlife was, and in large areas still is, a form of sustenance in the hinterland, and trade in fur determined the course of exploration and settlement. During the period of the opening up of the country, a number of mammals and birds became seriously depleted or completely extinct. The passenger pigeon, the great auk and the Labrador duck were extirpated, the buffalo vanished from the prairies, and wapiti, prong horn antelope and muskoxen were reduced to small fractions of their former numbers. The destruction was not limited to birds and mammals but in areas of settlement their habitat was reduced by the cutting and burning of the forests, the diversion and pollution of streams and other changes in the land.

* A series of special articles relating to the wildlife resources of Canada has been carried in previous editions of the Year Book. See the list of special articles in Chapter XXVII, Part II, under the heading of "Fauna and Flora".

Since then it may be said that wildlife has been changed and influenced by man to the degree that he has changed and influenced the environment for wildlife. The Arctic and alpine tundra, one of Canada's major vegetational regions, has been changed hardly at all: the adjacent subarctic and subalpine non-commercial forests have been changed principally as a result of increased human travel causing more forest fires; the great forest farther south has not lost its real character through being managed for commercial use; cultivable lands, whether originally forest or grassland, have completely changed, but often they and the managed forest are better for many forms of wildlife than the original wilderness. Some creatures thrive on change. There are more moose, deer, ruffed grouse and probably more coyotes than in Indian days. Fur species, such as beaver and muskrat, are easily managed and many small mammals and birds thrive better in fields and woodlots than in the virgin forests, provided that they are not poisoned by pesticides. At the present time, the harvestable surplus of game and fur species across Canada is seldom fully utilized and it is quite clear that wildlife will remain abundant wherever there is suitable habitat and enlightened management.

Thus, Canada today is known throughout the world for the wealth and variety of its wildlife. It maintains most or all the existing stocks of woodland caribou, mountain sheep, wolves, grizzly bears and wolverines, to mention a few. And these animals exist not only because of the vastness of their habitat but also because of man's efforts to preserve them. There is evidence of concern about the preservation of wildlife by the early Canadians; there were game laws in force in the original provinces when all but a few thousand acres of land were still the patrimony of the Indians. In 1885 pioneer conservationists were instrumental in establishing Banff Park in Alberta and in 1887 a bird sanctuary, the first on the Continent, was established at Last Mountain Lake in Saskatchewan. The same fervour for preservation of Canada's wildlife heritage led to the complete protection of wood bison in 1893 and to the purchase and establishment of a nucleus herd of plains bison at Wainwright in Alberta in 1907. Thus was formed the basis of wildlife conservation efforts, which, for a long time, took the form of protection of certain species from destruction by man or predator. Better knowledge of nature's operations and the recognition of the fact that many other factors combine to cause fluctuation in wildlife numbers are now being reflected in a loosening of restrictions on hunting and a rescinding of preserves. The science of animal numbers is new and sometimes runs counter to popular prejudice but it is well understood that any area will support only so many animals, and species that are highly productive must have a quick turnover. Wildlife must never be separated from the consideration of its environment and if the environment is fully stocked the annual increment need only replace the losses. All extra is surplus, only part of which is taken by predators and part, if the animal is a game species, by man.

As a natural resource, wildlife within the provinces comes under the administration of the respective provincial governments; wildlife on federal lands and certain problems of national or international interest are the concern of the Federal Government.

The Canadian Wildlife Service.—The Canadian Wildlife Service deals with most wildlife problems coming within the jurisdiction of the Federal Government. It was organized in 1947 to meet the growing need for scientific research in wildlife management and is a division of the Natural and Historic Resources Branch of the Department of Northern Affairs and National Resources. The Service conducts scientific research into wildlife problems in the Northwest Territories, Yukon Territory and the National Parks, advises the administrative agencies concerned on wildlife management, and co-operates in the application of such advice. It administers the Migratory Birds Convention Act, provides co-ordination and advice in connection with the administration of the Game Export Act in the provinces, deals with national and international problems relating to wildlife resources, and co-operates with other agencies having similar interests and problems in Canada and elsewhere.

The Migratory Birds Convention Act was passed in 1917 to give effect to the Migratory Birds Treaty signed at Washington in 1916. It provides a measure of protection for

numerous species of birds that migrate between the two countries. The Canadian Wildlife Service, in its capacity as administrator of the Act, is responsible for recommending the annual revision of the Migratory Bird Regulations, which govern such matters as open seasons and other waterfowl hunting details, taking and possessing migratory birds for scientific or propagating purposes, eiderdown collecting, etc. The Act and Regulations thereunder are enforced by the Royal Canadian Mounted Police and in both administration and enforcement co-operation is received from provincial authorities. There are 107 migratory bird sanctuaries in Canada, having a total area of 43,887 sq. miles. A sanctuary may be established on the initiative of the Department of Northern Affairs and National Resources or of a provincial or municipal government, or on petition by a private person or organization. Bird banding provides valuable information on the migration of birds and their natural history and is especially useful in waterfowl management. Serially numbered bands supplied by the United States Bureau of Sport Fisheries and Wildlife are used in Canada as well as in the United States.

Many research projects under way were continued during 1964. These included the study, in co-operation with the governments of Manitoba and Saskatchewan and the Council of the Northwest Territories, of barren-ground caribou and of wolves that prey upon caribou. Human utilization is still the most important factor in herd reduction but other significant factors include effects of forest fires on winter range, predation, accidents and poor calf survival. Studies were continued on mink, muskrat and beaver in the Mackenzie District, and of polar bear and Arctic fox in Keewatin and Franklin Districts. Big game mammals in the National Parks were also the object of continued study, special attention being given to mountain sheep and wapiti in the mountain parks of Alberta where large populations of those species facilitate investigations. In Wood Buffalo Park, investigations into the problems of disease and low reproductive rates among bison were continued as a long-term project in the hope that some control of each might be achieved.

Damage to cereal crops by wild ducks and sandhill cranes continued to receive intensive study and much time was devoted to other species greatly reduced in number or in danger of extinction, such as the Ross' goose, trumpeter swan, and whooping crane. Nation-wide investigations of migratory waterfowl included kill surveys conducted in Prince Edward Island, New Brunswick, Quebec and Ontario and a crop-damage survey in Saskatchewan. Arctic bird-banding programs were continued, as were pilot programs of wetlands leasing. The loss of wetlands to drainage and filling for agricultural and other purposes poses a serious threat to the waterfowl resource.

At the end of 1964 the research staff included 44 wildlife biologists stationed at various centres throughout Canada. Staff specialists covering mammalogy, limnology, migratory bird populations, migratory bird habitat, ARDA, and pesticides, were stationed in Ottawa. Ornithologists were located at Vancouver, B.C., Edmonton, Alta., Saskatoon, Sask., Winnipeg, Man., Ottawa and Aurora, Ont., Quebec, Que., Sackville, N.B., and St. John's, Nfld. Mammalogists were stationed in the Northwest Territories at Fort Smith and Inuvik, at Whitehorse in the Yukon Territory, and at Edmonton, Sackville and Ottawa. A limnologist was located at Jasper and a range specialist and two pathologists at Edmonton and Ottawa, respectively. A number of university graduates and undergraduates are engaged annually to assist in summer field work. Ottawa headquarters has an administrative staff of about 30 in addition to supervisory research officers.

Provincial Government Wildlife Conservation Measures.—As stated previously, each province has jurisdiction over its own wildlife resources. The measures adopted by the respective provincial governments to conserve these resources are outlined in the 1963-64 Year Book at pp. 46-52. The conservation of wild fur-bearing animals in the different provinces is discussed in the Fisheries and Furs Chapter, Part II, and information on provincial conservation of fisheries resources is given in Part I of the same Chapter, together with data relating to the work of the Fisheries Research Board of Canada and to international fisheries conservation (see Index).

THE FLORA OF CANADA*

An earlier general description of the flora of Canada was prepared for the 1938 Year Book by John Adams (1938) and revised in 1945 by Harold A. Senn. This account noted descriptive works on the Canadian flora prior to 1945 and gave an excellent summary of the factors affecting plant life under the headings of climate (temperature, precipitation, light, wind and altitude) and environment (ecological relationships and groups, exotic and weed flora). It also included a large section on the classification of the flora, noting the status at that date of Canadian cryptogams (ferns and fern allies, mosses, liverworts, lichens, fungi, and freshwater and marine algae) and phanerogams (flowering plants, made up of gymnosperms and angiosperms), and discussing the various floral regions of Canada as illustrated by the ferns and flowering plants. Reference may also be made to the paper by Adams (1926) entitled *A Survey of Canadian Plants in Relation to their Environment*.

This article will again present an account of the various Floral Regions but, rather than repeat much of the remaining easily available information, will concern itself chiefly with advances in Canadian botany since 1945 in an endeavour to present a broad view of the problems with which Canadian botanists are concerned.

Plant-collecting ranks with bird-watching as one of the most popular activities of amateurs in the field of natural history, and science has benefited greatly from the fact that the amateur collector has often reported his findings in the literature, perhaps as a checklist covering a certain region, or has donated his material (or duplicates) to be incorporated into the collections of large institutions where it is available for study.

The beauty of flowers provides the initial stimulus for collecting plants, and the relative ease with which plants may be collected and preserved and the small space required for their storage contribute to the popularity of the hobby. The methods of collecting and preserving botanical specimens are described in general by Gleason (1958), Porsild (1957), and in more detail by Savile (1962).

Latin names present an obstacle, but only at the beginning. They actually simplify working with plants because of the precision with which they are applied to distinct forms. Many different plants are known by the same vernacular or 'common' name in different parts of the country, and many plants also have several common names, often making it impossible to pinpoint accurately the species to which one is referring. The 'binomial' Latin name also gives some information as to the relationships of the plant. The Rose Family (*Rosaceae*), for example, is made up of several groups (genera), each of which usually contains several species obviously more closely related to one another than to members of the other groups. One of these groups constitutes the genus *Rosa*. One of the members of this group is distinguished from other 'roses' by its thick, roughly veined (rugose) leaves, and is known as the species *Rosa rugosa*. Another group of the Rose Family unites the cinquefoils or five-fingers in the genus *Potentilla*, but these are all so different from any species of *Rosa* that they obviously justify being placed in a separate major subdivision.

Floral Regions of Canada

In a country the size of Canada, several different floral regions are to be expected as a result of climatic and topographical differences, diverse soils and past history (submergence of the land, glaciation, land-bridges, etc.). Some idea of the complexity of the Floral Regions may be obtained by reference to Sheet 38 of the *Atlas of Canada* (1957), which shows the major regions further subdivided on the basis of their "natural vegetation". Because the regions of natural vegetation are based largely upon their dominant trees, there is a striking similarity between this vegetation map and the accompanying map. Four of the Floral Regions are dealt with in this article under the names used for the corresponding Forest Regions: the Boreal, Acadian, Great Lakes St. Lawrence, and Deciduous (Carolinian) Forest Regions. The titles used for the other Floral Regions are: Prairie

* Prepared by Homer J. Scoggan, Ph.D. (McGill), National Museum of Canada, Natural History Branch, Department of the Secretary of State, Ottawa. Bibliographical references (chiefly since 1945) are listed alphabetically by authors in the Bibliography at pp. 59-61.

Grasslands and Parklands Floral Region, Western Floral Region, and Arctic Barren Grounds Floral Region. The Western Floral Region comprises the area covered by the Subalpine, Columbia, Montane, and Coast Forest Regions. A larger scale map showing the Forest Regions in more detail, prepared in 1956 and reprinted in 1963, is available from the federal Department of Forestry.

Boreal Forest Floral Region

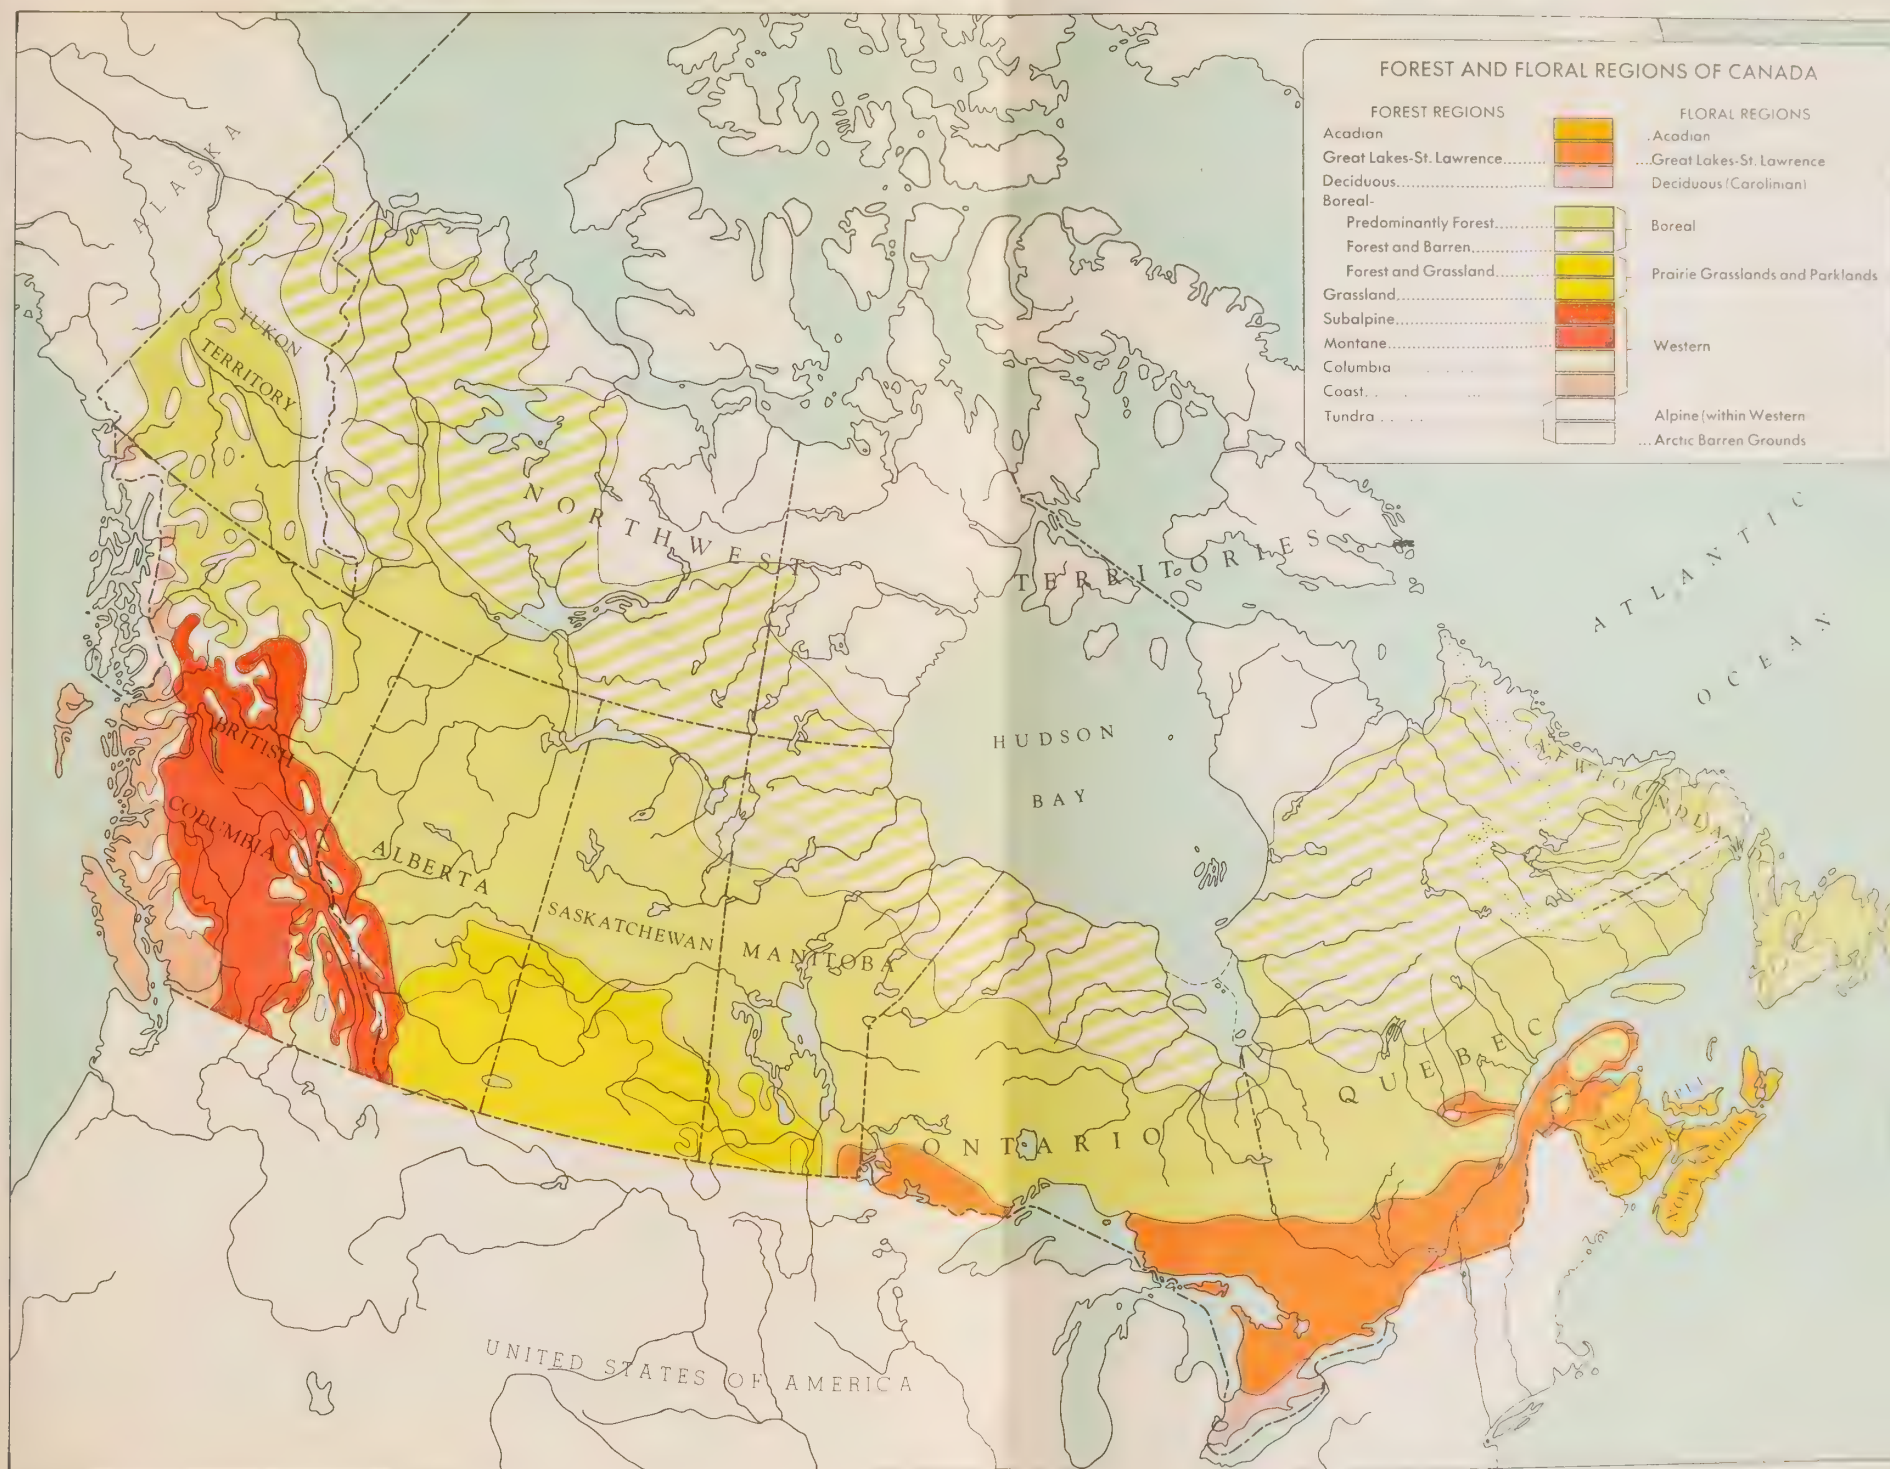

The great transcontinental coniferous forest occupies about three quarters of the area of continental Canada. It merges on the north into the Arctic Barren Grounds and on the south into the other Floral Regions. It reaches northward in the east only to the head of Ungava Bay but slopes steeply northwestward to reach the delta of the Mackenzie River. The cause of this slope is discussed under the heading "The Plant Environment" (see p. 49).

Except for southern British Columbia and the coastal and alpine regions of that province, the boreal forest extends from the Atlantic to the Pacific, its area being delimited by those of the dominant species, black spruce (*Picea mariana*) and white spruce (*P. glauca*—replaced in the west by the varieties *albertiana* and *porsildii*). White spruce favours upland sites, with aspen (*Populus tremuloides*) and paper-birch (*Betula papyrifera*) as common associates throughout nearly the whole area and balsam-fir and jack-pine throughout most of the southern half. Black spruce favours low-lying wet muskegs, where it is commonly associated throughout the area with tamarack (*Larix laricina*). Eastern white cedar (*Thuja occidentalis*), hemlock (*Tsuga canadensis*), white pine (*Pinus strobus*) and red pine (*P. resinosa*) occur in the southeastern section, the cedar being an indicator of calcareous habitats in a region largely underlain by the acidic granites and gneisses of the Canadian Shield. Choke-cherry (*Prunus virginiana*) and pin-cherry (*P. pensylvanica*) are common throughout the Region and mountain-maple (*Acer spicatum*) is common in the eastern half. The ground cover is usually sparse, even in relatively open areas, the thick layer of old, very slowly decaying 'needles' of past years providing little encouragement for seedlings to root. Shrubs and herbs are typically oxylophytic (acid-loving).

Characteristic shrubs of the Region include junipers (*Juniperus communis* and *J. horizontalis*), various currants and gooseberries (*Ribes*), shrubby cinquefoil (*Potentilla fruticosa*), buckthorn (*Rhamnus alnifolia*), buffalo-berry (*Shepherdia canadensis*), red-osier (*Cornus stolonifera*), and several members of the Honeysuckle Family such as snowberry (*Symphoricarpos albus*), honeysuckles (*Lonicera*), bush-honeysuckle (*Diervilla lonicera*), viburnums (*Viburnum*) and elder-berries (*Sambucus*). Sweet gale (*Myrica gale*) is common around the margins of ponds. Sweet-fern (*Comptonia peregrina*) and bearberry (*Arctostaphylos uva-ursi*) favour dry sandy areas.

Typical herbs include wild lily-of-the-valley (*Maianthemum canadense*), bluebead (*Clintonia borealis*), members of the Orchid Family (calypso, *Calypso bulbosa*; stemless lady's-slipper, *Cypripedium acaule*; twayblades, *Listera*; coral-roots, *Corallorhiza*; rattlesnake-plaintains, *Goodyera*), miterwort (*Mitella nuda*), goldthread (*Coptis groenlandica*), red baneberry (*Actaea rubra*), sanicle (*Sanicula marilandica*), sweet cicelys (*Osmorhiza*), bunchberry (*Cornus canadensis*), Indian-pipe (*Monotropa uniflora*), pinesap (*M. hypopithys*), one-flowered pyrola (*Moneses uniflora*), wintergreens (*Pyrola*), prince's-pine (*Chimaphila umbellata*), creeping snowberry (*Gaultheria hispida*), cow-wheat (*Melampyrum lineare*) and twin-flower (*Linnaea borealis*).

Salt-marshes along the Atlantic Coast of this and the Acadian Forest Region commonly harbour such halophytes (salt-lovers) as arrow-grass (*Triglochin maritima*), alkali-grasses (*Puccinellia*), spike-grass (*Distichlis spicata*), sedges such as *Carex subspathacea*, *C. paleacea*, *C. mackenzii*, and *C. glareosa*, a bulrush (*Scirpus rufus*), black grass (*Juncus gerardii*), knotweeds (*Polygonum*), three docks (*Rumex maritimus* var. *fueginus*, *R. mexicanus*, and *R. pallidus*), coast-blite (*Chenopodium rubrum*), orach (*Atriplex patula*; *A. glabriuscula*), sea-samphire (*Salicornia europaea*), sea-blites (*Suaeda*), sand-spurreys (*Spergularia*), sea-chickweed (*Arenaria peploides*), seaside crowfoot (*Ranunculus cymbalaria*), Scotch lovage

(*Ligusticum scoticum*), sea-milkwort (*Glaux maritima*), sea-lavender (*Limonium nashii*), a gerardia (*Gerardia maritima*), seaside-goldenrod (*Solidago sempervirens*) and asters (*Aster brachyactis*, *A. laurentianus*, *A. subulatus*). A peculiar member of the Parsley Family, *Lilacopsis chinensis*, with leaves replaced by hollow jointed petioles, occurs in the salt-marshes of Nova Scotia. Ditch-grass (*Ruppia maritima*) is common in pools in the salt-marshes. Other halophytic plants confined chiefly to the coastal sands include a meadow-grass (*Poa eminens*), sea lyme-grass (*Elymus mollis*), beachgrass (*Ammophila breviligulata*), a knotweed (*Polygonum fowleri*), saltwort (*Salsola kali*), sea-rocket (*Cakile edentula*), beach-pea (*Lathyrus japonicus*), seaside-spurge (*Euphorbia polygonifolia*), beach-heath (*Hudsonia tomentosa*), sea-lungwort (*Mertensia maritima*) and a large-flowered ragwort (*Senecio pseudo-arnica*). Species found more commonly on rocky sea ledges include pearlwrorts (*Sagina*), an angelica (*Coelopleurum*), thrift (*Armeria labradorica*) and seaside-plaintains (*Plantago juncoides* and *P. oliganthos*).

Undrained areas of acidic heath bog with a characteristic ericaceous flora are scattered throughout the wetter parts of this as well as the Great Lakes-St. Lawrence Forest Region. Their remarkably uniform flora typically includes such members of the Heath Family (*Ericaceae*) as leather-leaf (*Chamaedaphne*), Labrador-tea (*Ledum groenlandicum*), bog-laurel (*Kalmia polifolia*), bog-rosemary (*Andromeda glaucophylla*), small cranberry (*Oxycoccus quadripetalus*), velvet-leaf-blueberry (*Vaccinium myrtilloides*) and low sweet blueberry (*V. pensylvanicum*). Another member of the family, rhodora (*Rhododendron canadense*), occurs in heath bogs from Quebec to Nova Scotia and Newfoundland. Other characteristic heath bog species are a cotton-grass (*Eriophorum angustifolium*), baked-appleberry (*Rubus chamaemorus*), and two insectivorous plants—pitcher-plant (*Sarracenia purpurea*) and sundew (*Drosera rotundifolia*). Three-way sedge (*Dulichium arundinaceum*), marsh-five-finger (*Potentilla palustris*) and buckbean (*Menyanthes trifoliata*) are common associates along the borders of ponds and in drainage ditches.

An interesting facet of botanical work is the investigation of the changes that take place in the composition of plant communities as they follow climatic trends toward the establishment of what is termed the 'climax' association for a particular climatic region. These successional changes sometimes take place rapidly enough for direct observation. For example, white spruce (*Picea glauca*), the dominant member of upland areas throughout the transcontinental coniferous forest, is commonly quickly replaced by aspen (*Populus tremuloides*) or jack-pine (*Pinus banksiana*) following forest fires, the burnt areas also being taken over by dense stands of fireweed (*Epilobium angustifolium*). It may be decades before the original white spruce forest is re-established. Other changes take place more slowly but, by studying an association in various stages of its development, one may usually form a reliable opinion as to the various stages in the succession toward the climax association. Heath bogs illustrate this very well.

As noted above, the characteristic flora of a heath bog consists largely of ericaceous species, these growing on the drier upland sites of the bog. A pond in the bog, however, may contain such floating aquatics as pondweeds (*Potamogeton*), yellow pond-lilies (*Nuphar*) and water-lilies (*Nymphaea*), while its shores may be lined with cat-tails (*Typha*), reed-grass (*Phragmites communis*), marsh-five-finger (*Potentilla palustris*), water-parsnip (*Sium suave*), water-hemlocks (*Cicuta*) and buckbean (*Menyanthes trifoliata*). As the shore plants multiply, they gradually encroach upon the open water of the pond, building a floating carpet upon which it is sometimes possible to walk. The pond is finally completely filled by these plants, whose continued growth raises the level still more and accumulates soil upon which the ericaceous community can develop. Such acid-loving trees as black spruce (*Picea mariana*) and tamarack (*Larix laricina*) may also invade the area. Under present climatic conditions, the heath bog appears to be a rather stable climax association, but if drainage ditches are dug (as in many of the commercial peat areas) the acids of the soil will be gradually leached away by rain-water, opening the way to invasion by aspen and other pioneering species, and finally to the forest characteristic of the region.

Acadian Forest Floral Region

The accompanying map places Nova Scotia, Prince Edward Island and most of southern New Brunswick in this Region. It is transitional to the Boreal Forest and, particularly in the northern part, scarcely distinguishable from it as to tree species. In its more typical development, however, the following deciduous trees are characteristic: American elm (*Ulmus americana*), red oak (*Quercus borealis*), sugar-maple (*Acer saccharum*), red maple (*A. rubrum*), striped maple (*A. pensylvanicum*), yellow birch (*Betula lutea*), wire birch (*B. populifolia*), various ashes (*Fraxinus*), large-toothed aspen (*Populus grandidentata*), ironwood (*Ostrya virginiana*) and beech (*Fagus grandifolia*). A characteristic conifer is red spruce (*Picea rubens*).

Typical shrubs include witch-hazel (*Hamamelis virginiana*; blooming in the fall), black cherry (*Prunus serotina*), speckled alder (*Alnus rugosa*) and mountain-ash (*Sorbus americana*).

The herbaceous ground cover is very similar to that of the Great Lakes-St. Lawrence Forest Region and is described under that heading.

The Acadian Forest Region has somewhat more rainfall than the adjoining regions and is generally warmer than the Boreal Forest Region. Its most striking floristic element is a number of species characteristic of the Atlantic Coastal Plain, particularly the Pine Barrens of New Jersey, that reach their northern limits in Nova Scotia or Newfoundland (see p. 56); the small grass-like fern, curly-grass (*Schizaea pusilla*) is known only from shores, bogs and woods of Nova Scotia and Newfoundland and from the Pine Barrens of New Jersey; a member of the Amaryllis Family (*Lophiola americana*) is known only from bogs and peaty shores of western Nova Scotia, northern Delaware and the Pine Barrens of New Jersey (the Nova Scotian plant is sometimes separated as a distinct species, *L. septentrionalis*); broom-crowberry (*Corema conradii*), another characteristic Pine Barren plant, is definitely known in Canada only from sands and siliceous rocks of Nova Scotia, Prince Edward Island, Newfoundland and the Magdalen Islands of Quebec; dwarf huckleberry (*Gaylussacia dumosa*) is known in Canada only from peaty bogs of eastern New Brunswick and Newfoundland; Plymouth gentian (*Sabatia kennedyana*) inhabits sandy and peaty margins of fresh ponds of Nova Scotia (Yarmouth Co.), Massachusetts and Rhode Island; screw-stem (*Bartonia paniculata*) is known from Nova Scotia, Newfoundland and St. Pierre and Miquelon, south along the Coastal Plain to Florida.

Great Lakes-St. Lawrence Forest Floral Region

This Region includes northern New Brunswick, parts of the coastal region of the Gaspé Peninsula of Quebec, southern Quebec, southern Ontario (except for the Deciduous Forest Floral Region in the extreme south), and the extreme southeastern corner of Manitoba, together with an enclave around Lake St. John, Que., where the topography is strikingly like that of the St. Lawrence and Richelieu River lowlands. Temperatures are moderate but rainfall is generally somewhat less than in the Acadian Forest Floral Region.

Sugar-maple (*Acer saccharum*), red maple (*A. rubrum*), striped maple (*A. pensylvanicum*), red oak (*Quercus borealis*), red ash (*Fraxinus pensylvanica*), black ash (*F. nigra*), American elm (*Ulmus americana*), yellow birch (*Betula lutea*), wire-birch (*B. populifolia*) and large-toothed aspen (*Populus grandidentata*) occur in the Gaspé Peninsula (the northernmost part of the region), and beech (*Fagus grandifolia*) just enters the extreme southwestern part of the peninsula. Red spruce (*Picea rubens*), cottonwood (*Populus deltoides*), bur-oak (*Quercus macrocarpa*), white ash (*Fraxinus americana*), butternut (*Juglans cinerea*), and basswood (*Tilia americana*) extend northward to about the latitude of Quebec City, but the following drop out at about the latitudes of Ottawa and Montreal or sooner: black walnut (*Juglans nigra*), shagbark-hickory (*Carya ovata*), bitternut (*C. cordiformis*), white oak (*Quercus alba*), swamp white oak (*Q. bicolor*), yellow oak (*Q. muhlenbergii*), slippery elm (*Ulmus rubra*), rock elm (*U. thomasi*), hackberry (*Celtis occidentalis*), sweet birch (*Betula lenta*), and blue-beech (*Carpinus caroliniana*). Extensive stands of conifers

also occur, but chiefly in areas transitional to the Boreal Forest Region. However, the eastern hemlock (*Tsuga canadensis*) and eastern white cedar (*Thuja occidentalis*) have their main distribution in Canada in this Region.

The following shrubs or small trees occur more or less throughout the Region: Canada yew (*Taxus canadensis*), sweet gale (*Myrica gale*), beaked hazel (*Corylus cornuta*), swamp-birch (*Betula pumila*), speckled alder (*Alnus rugosa*), green alder (*A. crispa*), currants and gooseberries (*Ribes*), witch-hazel (*Hammamelis virginiana*), spiraeas (*Spiraea*), juneberries (*Amelanchier*), hawthorns (*Crataegus*), raspberries and blackberries (*Rubus*), wild plum (*Prunus americana*), Canada plum (*P. nigra*), pin-cherry (*P. pensylvanica*), choke-cherry (*P. virginiana*), black cherry (*P. serotina*), prickly-ash (*Xanthoxylum americanum*), stag-horn-sumac (*Rhus typhina*), mountain-holly (*Nemopanthes mucronata*), climbing bitter-sweet (*Celastrus scandens*), bladdernut (*Staphylea trifolia*), buckthorn (*Rhamnus alnifolia*), New Jersey tea (*Ceanothus americanus* and *C. ovatus*), leatherwood (*Dirca palustris*), buffalo-berry (*Shepherdia canadensis*), sanicle (*Sanicula marilandica*), sweet cicelys (*Osmorhiza*), John's-cabbage (*Hydrophyllum virginianum*), bush-honeysuckle (*Diervilla lonicera*), honeysuckles (*Lonicera*), snowberry (*Symphoricarpos albus*), and various viburnums (*Viburnum*).

Consisting chiefly of broad-leaved trees, this Region (as also the Acadian) provides too much shade during the summer months for a dense ground cover of smaller plants. However, before the leaves of the trees have expanded in the spring, a remarkably colourful and interesting flora springs up composed of plants able to complete their life cycle in the relatively short period of available sunlight between the end of March and the beginning of June and to store up reserves, chiefly in underground organs such as bulbs, tubers or root-stocks, for an early start on the next season's growth. Such 'spring' flowers include Jack-in-the-pulpit (*Arisaema atrorubens*), wild ginger (*Asarum canadense*), spring-beauty (*Claytonia caroliniana*), hepaticas (*Hepatica americana* and *acutiloba*), blue cohosh (*Caulophyllum thalictroides*), may-apple (*Podophyllum peltatum*), bloodroot (*Sanguinaria canadensis*), Dutchman's-breeches (*Dicentra cucullaria*), squirrel-corn (*D. canadensis*), false miterwort (*Tiarella cordifolia*), coolwort (*Mitella diphylla*), barren strawberry (*Waldsteinia fragarioides*), dwarf ginseng (*Panax trifolius*), and several members of the Lily Family such as bellworts (*Uvularia*), dog's-tooth-violet (*Erythronium americanum*), Solomon's-seal (*Polygonatum*), false Solomon's-seal (*Smilacina racemosa*), Indian cucumber-root (*Medeola virginiana*) and trilliums (*Trillium*). To people living in the Region, the annual thrill of the first foray into the awakening woods helps to compensate for the bleak winter months.

Another attraction of the Region is the blaze of colour before leaf-fall in the autumn that transforms the landscape into one of the most breath-taking spectacles of the world. Mixed with the green of the conifers are the yellows, reds and scarlets of the maples and the browns of the oaks and beeches, a favourite subject of the artist. Upon the approach of cold weather, a corky *abscission layer* gradually develops at the junction of the leaf-petiole with the stem, blocking off the escape of soluble sugars from the leaf and favouring the development of red, blue and purple pigments known as *anthocyanins*. These anthocyanins, whose production, unlike that of the green *chlorophylls*, is favoured by cold weather, gradually mask the chlorophylls, the various degrees of masking producing the range of tints from yellow to scarlet.

Deciduous (Carolinian) Forest Floral Region

This very small Region lies on the Palaeozoic limestones and dolomites of the Niagara Peninsula bordering the north shore of Lake Erie, south of a line joining Grand Bend, near the southeast end of Lake Huron, to Toronto, on the northwest end of Lake Ontario. A narrow strip extending northeastward along the north shore of Lake Ontario to about the vicinity of Belleville, east of which contact is made with the Precambrian granites and gneisses of the Laurentian Shield, is also probably admissible to this floristic Region. Its most striking feature is the presence of a number of plants at their northern limits and found nowhere else in Canada. The Canadian distributions of most of these have been plotted on maps by Fox and Soper (1952; 1953; 1954), Soper (1956; 1962), and Soper and Heimburger (1961).

The trees include red mulberry (*Morus rubra*) of the Family *Moraceae*, tulip-tree (*Liriodendron tulipifera*) and cucumber-tree (*Magnolia acuminata*) of the Family *Magnoliaceae*, white sassafras (*Sassafras albidum*) of the Family *Lauraceae*, pawpaw (*Asimina triloba*) of the Family *Annonaceae*, sycamore (*Platanus occidentalis*) of the Family *Platanaceae*, and black gum (*Nyssa sylvatica*) of the Family *Nyssaceae*. With the possible exception of sycamore, these species are all representatives of families found nowhere else in Canada. Soper (1953, fig. 9) indicates the northern limit of the Carolinian flora, based on the ranges of eleven genera, as extending no farther north than a line connecting the southeast end of Lake Huron and the northwest end of Lake Ontario, the line bending south to pass approximately through London, Brantford and Guelph. Sycamore has outlying stations near the south end of Lake Huron and near Picton, Prince Edward Co., on the north shore of Lake Ontario. Honey-locust (*Gleditsia triacanthos*) and Kentucky coffee-tree (*Gymnocladus dioica*) of the Family *Leguminosae* are also possibly native in this Region but have been planted extensively farther north so that it is difficult to define their native northern limits precisely. Another genus restricted to this area, but representative of a family containing more widespread genera, is that of the chestnut (*Castanea dentata*) of the Beech Family (*Fagaceae*). However, apart from clumps of suckers on old stumps and some young trees that may be seedlings sprung from nuts planted by squirrels, there does not appear to be a single mature tree surviving in Canada following the fungus blight that first appeared in New York City in 1934 and is estimated to have killed off, by girdling the branches, up to 99 p.c. of the population. Other trees restricted to the Region but representative of genera with more widespread species are black oak (*Quercus velutina*), chestnut-oak (*Q. prinus*), chinquapin-oak (*Q. prinoides*), pignut (*Carya glabra*), big shellbark (*C. laciniosa*), sweet pignut (*C. ovalis*), mockernut (*C. tomentosa*), black walnut (*Juglans nigra*) and blue ash (*Fraxinus quadrangulata*). Certain other trees such as white oak (*Quercus alba*), yellow oak (*Q. muehlenbergii*), bitternut (*Carya cordiformis*), shagbark-hickory (*C. ovata*) and black maple (*Acer nigrum*) have their main area in Canada here but extend northward to near Ottawa or Montreal. A study of the sociology of the trees of this Region has been published by Maycock (1963).

Shrubs or small trees restricted to this Region in Canada are yam (*Dioscorea villosa*; stem twining), spicebush (*Lindera benzoin*), wild senna (*Cassia hebecarpa*), redbud (*Cercis canadensis*), shining sumac (*Rhus copallina*), burning-bush (*Euonymus atropurpureus*), running strawberry-bush (*E. obovatus*), roughleaf dogwood (*Cornus drummondii*), flowering dogwood (*C. florida*), shrubby St. John's-wort (*Hypericum spathulatum*), low blueberry (*Vaccinium vacillans*) and trumpet-creeper (*Campsis radicans*).

Other shrubs with their main Canadian area in this Region but ranging northward generally to near Ottawa or Montreal include red cedar (*Juniperus virginiana*), two prickly vines climbing by tendrils (common greenbrier, *Smilax rotundifolia*, and china-root, *S. hispida*), wafer-ash (*Ptelea trifoliata*), northern prickly-ash (*Xanthoxylum americanum*), fragrant sumac (*Rhus aromatica*), poison sumac (*R. vernix*), climbing bittersweet (*Celastrus scandens*), bladdernut (*Staphylea trifolia*), Kalm's St. John's-wort (*Hypericum kalmianum*), grey dogwood (*Cornus racemosa*), deerberry (*Vaccinium stamineum*), maple-leaved viburnum (*Viburnum acerifolium*) and arrow-wood (*V. recognitum*).

Herbs restricted in Canada to this Region include walking fern (*Camptosorus rhizophyllus*), hart's-tongue fern (*Phyllitis scolopendrium*; early reports from New Brunswick are probably based upon introduced plants), burgrass (*Cenchrus longispinus*), sand-grass (*Triplasis purpurea*), two sedges (*Fimbristylis drummondii*; *Scleria verticillata*), unicorn-root (*Aletris farinosa*), blazing-star (*Chamaelirium luteum*), whorled pogonia (*Isotria verticillata*), nodding pogonia (*Triphora trianthophora*), yellow nelumbo (*Nelumbo lutea*), black snakeroot (*Cimicifuga racemosa*), isopyrum (*Isopyrum biternatum*), golden-seal (*Hydrastis canadensis*), twinleaf (*Jeffersonia diphylla*), wood-poppy (*Stylophorum diphyllum*), bowman's-root (*Gillenia trifoliata*; possibly escaped from gardens), wild indigo (*Baptisia tinctoria*), four bush-clovers (*Lespedeza*), swamp rose-mallow (*Hibiscus palustris*), green violet (*Hybanthus coloratus*), a prickly pear (*Opuntia compressa*), harbinger-of-spring (*Erigenia bulbosa*), cowbane (*Oxypolis rigidior*), spotted wintergreen (*Chimaphila maculata*),

columbo (*Swertia caroliniensis*), five milkweeds (*Asclepias exaltata*, *hirtella*, *purpurascens*, *sullivantii*, and *tuberosa*), two waterleaves (*Hydrophyllum appendiculatum* and *canadense*), wild potato-vine (*Ipomoea pandurata*), fog-fruit (*Lippia lanceolata*), three false foxgloves (*Aureolaria flava*, *pedicularia*, and *virginica*), blue-hearts (*Buchnera americana*), conobea (*Conobea multifida*), richweed (*Collinsonia canadensis*), corn-salad (*Valerianella chenopodiifolia*), climbing hempweed (*Mikania scandens*; the only climbing composite in Canada), wing-stem (*Actinomeris alternifolia*), leafcup (*Polymnia canadensis*), ironweeds (*Vernonia*) and four rosinweeds (*Silphium*).

Other herbs with their main area in this Region but ranging northward to near Ottawa or Montreal include two sedges (*Fimbristylis autumnalis* and *Scleria triglomerata*), skunk-cabbage (*Symplocarpus foetidus*), two aquatic water-meals (*Wolffia columbiana* and *W. punctata*; the simplest and smallest of all flowering plants), pokeweed (*Phytolacca americana*), a bush-clover (*Lespedeza capitata*) and an umbellifer (*Chaerophyllum procumbens*). The spring flowers listed for the Great Lakes-St. Lawrence Forest Floral Region (see p. 39) also occur here.

Prairie Grasslands and Parklands Floral Region

This Region begins a few miles east of Winnipeg and ends at the Rocky Mountain foothills of Alberta. Its northern boundary extends from the south end of Lake Winnipeg to the vicinity of Edmonton. Approximately the northern third is aspen parkland in which open stands of aspen (*Populus tremuloides*) and bur-oak (*Quercus macrocarpa*) mark the transition between the grasslands to the south and the boreal coniferous forest to the north. The Region comprises three general levels, rising from east to west. The first and lowest level includes most of the relatively moist Manitoba prairie except the extreme southwestern corner. It is marked off from the second prairie level to the west by a glacial moraine, the Missouri Coteau, west of Estevan in southeastern Saskatchewan. Because of the abundance of many relatively tall, conspicuously flowered plants such as prairie-lily (*Lilium philadelphicum*), beard-tongues (*Pentstemon*), asters (*Aster*), goldenrods (*Solidago*) and sunflowers (*Helianthus*), this first prairie level has a more lush appearance than those to the west, whose more arid nature is reflected in the abundance of prickly pear (*Opuntia polyacantha*), purple cactus (*Mamillaria vivipara*), prairie sagewort (*Artemisia frigida*), and such short wiry xerophilous grasses as grama-grass (*Bouteloua gracilis*) and buffalo-grass (*Buchloe dactyloides*). The third prairie level begins near Parkbeg, Sask., about 30 miles west of Moose Jaw, and continues westward to the Rocky Mountain foothills.

Precipitation is the principal factor affecting plant growth in the prairies but its seasonal distribution and its range of fluctuation from year to year are often more important than the actual total inches of rain. The average annual precipitation in southwestern Manitoba, for example, is between 10 and 28 inches, but occasional years of high rainfall tend to mask the true conditions. The years of drought are the critical ones. Much of the Manitoba area, as well as the parklands of Saskatchewan and Alberta, fall within Thorntwaite's Sub-humid Microthermal Climatic Province (see p. 5'), denoting suitable temperatures and adequate precipitation for plant growth. Most of the grasslands of Saskatchewan and Alberta, however, fall within his Semi-arid Microthermal Climatic Province, characterized by a deficiency of precipitation.

Several theories, including the effect of lightning, large herds of buffalo, or of fires made by the early Indians, have been advanced to account for the treelessness of the prairies, but climatic conditions are probably largely responsible. The characteristic absence of trees on exposed, well-drained upland sites reflects the adverse influence of low precipitation effectiveness, although the extremely tough nature of the thick prairie sod is undoubtedly also a major barrier to the establishment of tree seedlings. The well established and extensive root systems of the prairie species, which thoroughly occupy the soil in several more or less distinct strata from a level immediately below the surface, greatly reduce the chances for survival of tree seedlings, which must also withstand the extremely severe conditions of the first winter's exposure. These factors may largely explain the

scarcity of annuals in the prairie flora, as well as of weeds, except in disturbed areas. Under present climatic conditions, grassland and parkland appear to be in a state of balanced tension, their dividing line advancing or retreating in conformity with climatic cycles of varying duration. Groves of aspen stretch throughout the prairies along the margins of rivers and streams, and Bird (1961—*Ecology of the Aspen Parkland of Western Canada*) expresses the opinion that, where there is sufficient moisture and fires are not too frequent, the parkland is slowly replacing the prairie in the south and is itself being replaced by spruce along its northern front. It is interesting to note the occurrence of a relict spruce community in the Spruce Woods Forest Reserve south of Brandon, where isolated thickets and clumps of white spruce (*Picea glauca*), associated with creeping juniper (*Juniperus horizontalis*), are scattered throughout an area of typical prairie vegetation.

There appears to be no consistent correlation between local prairie communities and local soil types, except to the extent that the plants themselves have contributed to soil differentiation. Where both forest and prairie vegetation have developed on the original glacial till, the soil under the latter is more fertile by reason of the influence of the prairie vegetation itself and of the more arid climate to which the prairie species are adapted. In the forest, humus accumulates and mostly decays on the soil surface, whereas the numerous roots and rootstocks of prairie species add humus more generally throughout the soil profile, with consequent improvement in water-retaining properties, soil aeration, soil temperature, content of nitrogen-fixing bacteria and fungi, and ease of root penetration.

The arid nature of the upland prairie habitat finds expression in various xerophytic adaptations of the plants. The almost complete occupation of the various soil levels by the root systems of different species has already been noted. This points to a fine adjustment between species, so that considerable changes in their relative abundance are unlikely. Species such as june-grass (*Koeleria cristata*), with a shallow, widespreading root system, are able to use the moisture of the many light showers whose water does not soak in deeply, while deep-rooted species, such as ground-plum (*Astragalus caryocarpus*) and Indian turnip (*Psoralea esculenta*), can reach the more reliable water supply of greater depths. The enlarged root of the latter also serves as an organ of water storage, as does the stem of the purple cactus (*Mamillaria vivipara*) of the sand-dune habitat. Low stature, with attendant decrease of exposure to drying winds, is characteristic, few upland species exceeding a height of one or two feet. Species having small or narrow leaves are common, the lower leaves often being shed during periods of drought.

It may be noted here that the only western tree species that reaches the Prairie Provinces is the lodgepole pine (*Pinus contorta* var. *latifolia*), which occurs, as an outlier from its main area, on the Cypress Hills of southwestern Saskatchewan.

A typical prairie flora (representative, also, of the typical ground covering of the aspen parklands) commonly includes such species as the following, many of which belong to the Grass (*Gramineae*), Sedge (*Cyperaceae*), Rose (*Rosaceae*), Pulse (*Leguminosae*) and Composite (*Compositae*) Families: feathergrasses (*Stipa*), oat-grass (*Helictotrichon hookeri*), grama-grasses (*Bouteloua*), cord-grass (*Spartina gracilis*), wild rye (*Elymus macounii*), meadow-grasses (*Poa*), june-grass (*Koeleria cristata*), sedges (*Carex*), wild onions (*Allium*), stargrass (*Hypoxis hirsuta*), pasque-flower (*Pulsatilla ludoviciana*), prairie-buttercup (*Ranunculus rhomboideus*), thimbleweed (*Anemone cylindrica*), cut-leaved anemone (*A. multifida*), bladder-pods (*Lesquerella*), stinking-clover (*Cleome serrulata*), alumroot (*Heuchera richardsonii*), cinquefoils (*Potentilla*), torch avens (*Geum triflorum*), chamaerhodos (*Chamaerhodos nuttallii*), milk-vetches (*Astragalus*), loco-weeds (*Oxytropis*), wild licorice (*Glycyrrhiza lepidota*), hedysarum (*Hedysarum alpinum*), prairie-trefoil (*Lotus americanus*), prairie clovers (*Petalostemum*), Indian bread-root (*Psoralea esculenta*), golden bean (*Thermopsis rhombifolia*), leadplant (*Amorpha canescens*), fragrant false indigo (*A. nana*), wild flaxes (*Linum*), larkspur violet (*Viola pedatifida*), silverberry (*Elaeagnus commutata*), evening primroses (*Oenothera nuttallii* and *serrulata*), prairie-parsleys (*Lomatium*), golden alexanders (*Zizia aurea*), milkweeds (*Asclepias ovalifolia*, *speciosa*, and *viridiflora*), marble-seeds (*Onosmodium*), puccoons (*Lithospermum*), blue giant hyssop (*Agastache foeniculum*),

wild bergamot (*Monarda fistulosa*), owl's clover (*Orthocarpus luteus*), beard-tongues (*Pentstemon*), northern bedstraw (*Galium boreale*), western snowberry (*Symphoricarpos occidentalis*), spiked lobelia (*Lobelia spicata*), false dandelions (*Agoseris*), skeleton-weeds (*Lygodesmia*), everlastings (*Antennaria*), wormwoods (*Artemisia*), asters (particularly of the *Aster ericoides* group), golden asters (*Chrysopsis*), rabbit brush (*Chrysothamnus nauseosus*), Flodman's thistle (*Cirsium flodmanii*), purple cone-flower (*Echinacea angustifolia*), smooth fleabane (*Erigeron glabellus*), Gaillardia (*Gaillardia aristata*), iron-plants (*Haplopappus*), sunflowers (*Helianthus*), rubber-weeds (*Hymenoxys*), blazing-stars (*Liatris*), cone-flower (*Ratibida columnifera*), ragworts (*Senecio*) and goldenrods (*Solidago*).

Sand-dunes, roadsides, and 'blow-outs' in the dry prairie have such plants as scouring-rush (*Equisetum laevigatum*), spikemoss (*Selaginella densa*), creeping savin (*Juniperus horizontalis*), a fescue-grass (*Festuca altaica*), silkgrass (*Oryzopsis hymenoides*), sand-drop-seed (*Sporobolus cryptandrus*), panic-grasses (*Panicum*), sandgrass (*Calamovilfa longifolia*), beardgrasses (*Andropogon*), sedges (*Carex*), umbrella-sedges (*Cyperus houghtonii* and *C. schweinitzii*), spiderwort (*Tradescantia occidentalis*), winged pignut (*Cycloloma atriplicifolium*), bugseeds (*Corispermum*), umbrella-plant (*Eriogonum flavum*), four-o'clocks (*Mirabilis hirsuta* and *nyctaginea*), mouse-ear chickweed (*Cerastium nutans*), tansy-mustards (*Descurainia*), treacle-mustards (*Erysimum*), poison ivy (*Rhus radicans*), evening star (*Mentzelia decapetala*), scarlet gaura (*Gaura coccinea*), scarlet mallow (*Sphaeralcea coccinea*), prickly pear (*Opuntia polyacantha*), purple cactus (*Mamillaria vivipara*), milkweeds (*Asclepias viridiflora* and *verticillata*), vervain (*Verbena bracteata*), moss pink (*Phlox hoodii*), buffalo-bur (*Solanum rostratum*), broom-rapes (*Orobanche fasciculata* and *ludoviciana*), perennial ragweed (*Ambrosia psilostachya*), false ragweed (*Iva xanthifolia*), broom-weed (*Gutierrezia sarothrae*) and townsendsia (*Townsendia exscapa*). Most of the original grass-land habitats have disappeared under cultivation and it is significant that many sun-loving prairie species, together with many common weeds, occur in such open sandy habitats, their establishment there being probably largely the result of lack of competition with forest species, although some aspen (*Populus tremuloides*) and bur-oak (*Quercus macrocarpa*) may be present.

Saline or alkaline flats, common throughout the prairies, are characterized by halophytic members of the Goosefoot Family (*Chenopodiaceae*) such as glasswort (*Salicornia rubra*), winter sage (*Eurotia lanata*), sea-blite (*Suaeda depressa*), orach (*Atriplex argentea*, *nuttallii*, and *patula*), poverty-weed (*Monolepis nuttalliana*), greasewood (*Sarcobatus vermiculatus*), suckleya (*Suckleya suckleyana*) and coast-blite (*Chenopodium rubrum*), together with alkali-grass (*Distichlis stricta*), cord-grasses (*Spartina gracilis* and *pectinata*), goose-grass (*Puccinellia nuttalliana*), sand-spurry (*Spergularia marina*), seaside crowfoot (*Ranunculus cymbalaria*), sea-milkwort (*Glaux maritima*), heliotrope (*Heliotropium curassavicum*) and poverty-weed (*Iva axillaris*).

Western Floral Region

This is an extremely mountainous area lying chiefly in the southern half of British Columbia although one of the Forest Regions (the Subalpine) includes the Rocky Mountains of southwestern Alberta and extends into the northern half of British Columbia to merge with the Boreal Forest Region. Other Forest Regions include those called by Rowe (1959) the Columbia, Montane and Coast Forest Regions. Passing from west to east at about the latitude of Vancouver Island, the following mountain ranges are traversed: Coast, Lillooet, Cascades, Columbia, Monashee, Selkirks, Purcell, and Rocky Mountains.

The Coast Forest Region includes the lower level of Vancouver Island, the Queen Charlotte Islands, and the coastal region (and Coast Range) of British Columbia. The Subalpine Forest Region has the general shape of a horseshoe, the Coast Range of its western arm bounding the western edge of the Montane Forest Region and the Cariboo, Columbia, Selkirks and Rocky Mountain ranges of its eastern arm enclosing the finger-like river valley strips of the Columbia Forest Region. It includes the forests above about 3,000 feet altitude on Vancouver Island and the mainland coast, and between approximately 5,000 and 6,800 feet altitude in the Rocky Mountain section. The other forest regions lie generally below

the 3,000-foot level, while the treeless slopes and summits above treeline constitute a separate floral region of alpine and arctic-alpine plants. Shaw (1909) has published a paper entitled *The Causes of Timber-line on Mountains*.

The floras of the various major subdivisions of the Western Floral Region are described briefly under several headings:—

Coast Forest Region.—The lower levels of Vancouver Island, the Queen Charlotte Islands and the mainland coastal strip north to the Alaska Panhandle lie in this Region, whose heavy rainfalls and mild temperatures are reflected in the dominance of the following mesophytic (moisture-loving) trees essentially confined to the Region: Sitka spruce (*Picea sitchensis*), amabilis fir (*Abies amabilis*), mountain hemlock (*Tsuga mertensiana*), yellow cypress or cedar (*Chamaecyparis nootkatensis*), shore pine (*Pinus contorta*; the var. *latifolia*, with a more slender trunk, is the more widely distributed lodgepole pine), red alder (*Alnus rubra*), broadleaf maple (*Acer macrophyllum*) and cascara (*Rhamnus purshiana*; a small area also in the interior). On Vancouver Island and the adjacent mainland are the only stands in Canada of Garry oak (*Quercus garryana*), arbutus (*Arbutus menziesii*; bark bright orange-red), and vine maple (*Acer circinatum*). Pacific dogwood (*Cornus nuttallii*), usually a shrub but occasionally a small tree, is found on Vancouver Island and in the lower Fraser Valley.

More wide-ranging trees include grand fir (*Abies grandis*), western hemlock (*Tsuga heterophylla*), lodgepole pine (*Pinus contorta* var. *latifolia*), western white pine (*P. monticola*), western red cedar (*Thuja plicata*), Douglas fir (*Pseudotsuga mucronata*), Rocky Mountain juniper (*Juniperus scopulorum*), western yew (*Taxus brevifolia*), Sitka alder (*Alnus sinuata*), black cottonwood (*Populus trichocarpa*) and dwarf maple (*Acer glabrum*).

The large-leaved ericaceous shrub, salal (*Gaultheria shallon*), has its main distribution in this Region. A member of the Broom-rape Family (*Boschniakia hookeri*) lives parasitically on its roots and was formerly used as a food plant by the Indians. Other shrubs essentially confined to the Coast Forest Region include Sitka willow (*Salix sitchensis*), two gooseberries (*Ribes divaricatum* and *R. lobbii*), two currants (*Ribes bracteosum* and *R. sanguineum*), Indian plum (*Osmaronia cerasiformis*), salmon-berry (*Rubus spectabilis*), Oregon crab-apple (*Pyrus fusca*), red bilberry (*Vaccinium parvifolium*) and evergreen huckleberry (*V. ovatum*). More wide-ranging shrubs include Oregon grape (*Mahonia aquifolium*), thimbleberry (*Rubus parviflorus*), buck-brush (*Ceanothus sanguineus*), devil's-club (*Oplopanax horridus*), tall mountain bilberry (*Vaccinium membranaceum*) and wax-berried elder (*Sambucus cerulea*).

Common herbs of this Region include giant horsetail (*Equisetum telemateia*), several ferns (*Blechnum spicant*, *Cheilanthes gracillima*, *Dryopteris arguta*, *Gymnogramme triangularis*, *Polypodium scolieri*, *P. vulgare*, *Polystichum andersonii*, *P. munitum*, *Woodwardia fimbriata*), western skunk-cabbage (*Lysichiton americanum*), western bluebead-lily (*Clintonia uniflora*), western wake-robin (*Trillium ovatum*), western wild ginger (*Asarum canadense*), western yellow water-lily (*Nuphar polysepalum*), western marsh-marigold (*Caltha asarifolia*), western buttercup (*Ranunculus occidentalis*), false bugbane (*Trautvetteria grandis*), cutleaf goldthread (*Coptis asplenifolia*), vanilla-leaf (*Achlys triphylla*), western Dutchman's-breeches (*Dicentra formosa*), foamflowers (*Tiarella laciniata* and *T. unifoliata*), several western miterworts (*Mitella*), goat's-beard (*Aruncus sylvestris*), ocean spray (*Holodiscus discolor*), a violet (*Viola glabella*), water parsley (*Oenanthe sarmentosa*), white-veined wintergreen (*Pyrola picta*), white-flowered rhododendron (*Rhododendron albiflorum*), false azalea (*Menziesia ferruginea*), little prince's pine (*Chimaphila menziesii*), deer-cabbage (*Nephrophyllidium crista-galli*) and swamp hedge-nettle (*Stachys mexicana*). The beautiful California rhododendron (*Rhododendron macrophyllum*) has extensive colonies on Vancouver Island and near Hope, B.C. On Vancouver Island are the only stations in Canada for such representatives of a California-type flora as a member of the Lily Family (*Brodiaea hyacinthina*), a member of the Poppy Family (*Meconella oregana*), two members of the Mustard Family (*Platyspermum scapigerum* and *Thysanocarpus curvipes*; a third, *Athyas pusillus*, is also found here and near Kootenay Lake), and a violet (*Viola nuttallii* var.

praemorsa). On Vancouver Island and adjacent islands are the only stations in Canada for four salt-marsh and seashore halophytes, three of them members of the Composite Family (*Baeria maritima*, *Cotula australis*, and *Jaumea carnosa*) and one a member of the Parsley Family (*Glehnia littoralis* var. *leiocarpa*). Other halophytic coastal species include arrow-grass (*Triglochin maritima*), a very large-headed sedge (*Carex macrocephala* var. *anthericoides*), salt-rush (*Juncus lescuirii*), western sea-samphire (*Salicornia ambigua*), sand-spurrey^s (*Spergularia canadensis* var. *occidentalis* and *S. macrotheca*), Chinook licorice (*Lupinus littoralis*), beach-pea (*Lathyrus japonicus*), a member of the Parsley Family with leaves reduced to hollow, jointed petioles (*Lilaeopsis occidentalis*; a similar species, *L. chinensis*, occurs on the coast of Nova Scotia), red goosefoot (*Convolvulus soldanella*), a franseria (*Franseria chamissonis*; with the habit of ragweed, *Ambrosia artemisiifolia*) and a large-flowered ragwort (*Senecio pseudo-arnica*; this, the arrow-grass and the beach-pea also occur along the Atlantic Coast).

Subalpine Forest Region.—As previously noted, this Region comprises the higher levels of the forests of British Columbia and southwestern Alberta, with a transition at lower levels to the forests characteristic of the other climatic belts and in the north with the trancontinental boreal forest. Essentially confined to it are amabilis fir (*Abies amabilis*), whitebark pine (*Pinus albicaulis*), limber pine (*P. flexilis*), mountain hemlock (*Tsuga mertensiana*), and alpine larch (*Larix lyallii*), although the dominant species are Engelmann spruce (*Picea engelmannii*) and alpine fir (*Abies lasiocarpa*). Extensive stands of lodgepole pine (*Pinus contorta* var. *latifolia*) clothe areas after burning, and there is some Douglas fir (*Pseudotsuga mucronata*) in the extreme southwestern Alberta section. On the east side of the Coast Range are some western hemlock (*Tsuga heterophylla*), western red cedar (*Thuja plicata*), and western white birch (*Betula papyrifera* var. *commutata*), and in the northern part is an admixture of boreal forest species such as white and black spruce (*Picea glauca* and *mariana*), aspen (*Populus tremuloides*) and balsam-poplar (*Populus balsamifera*). The herbaceous ground-cover vegetation is transitional between that of the treeless summits and slopes and the lower-lying forest regions (see p. 44).

Montane Forest Region.—"The Montane Forest has developed in response to the prevailing dry climate of the central plateau land of British Columbia and of the southern mountain valleys adjacent to the Alberta boundary" (Rowe, 1959). Douglas fir (*Pseudotsuga mucronata*) is the primary dominant as far north as the northern boundary of the Fraser Plateau at about the latitude of Quesnel, although it is replaced over considerable areas by lodgepole pine (*Pinus contorta* var. *latifolia*) after fire. Engelmann spruce (*Picea engelmannii*) and alpine fir (*Abies lasiocarpa*) from the upper subalpine forests mix with these on cool north-facing slopes throughout the Region, and south of about latitude 51° N in the arid grassland region characteristic of the Dry Belt between Kamloops and Penticton and around Kootenay Lake, ponderosa pine (*Pinus ponderosa*) "... extends into the grassland on rocky or sandy soils and into the Douglas fir zone on warm sunny slopes The pine forms a relatively permanent type over large areas because of the frequency of fires" (Rowe, 1959). Black cotton (*Populus trichocarpa*) is conspicuous on alluvial flats of the lowlands. Western larch (*Larix occidentalis*) occurs on drier sites in the southern part and white spruce (*Picea glauca*), aspen (*Populus tremuloides*) and paper birch (*Betula papyrifera*) mark the transition in the north to the transcontinental coniferous boreal forest.

Shrubs confined to the above-mentioned Dry Belt (with an annual rainfall rarely exceeding seven inches) include antelope-brush (*Purshia tridentata*) and a sagebrush (*Artemisia tridentata*). Other characteristic shrubs include twin-fruited ninebark (*Physocarpus malvaceus*) and rabbit-brush (*Chrysothamnus nauseosus*). Characteristic xerophytic herbs of the Dry Belt include a bunchgrass (*Agropyron spicatum*), several species of umbrella-plant (*Eriogonum*), rock pink (*Talinum spinescens*), bitter-root (*Lewisia rediviva*), a bladder-pod (*Lesquerella douglasii*), a buttercup (*Ranunculus glaberrimus*), four species of stick-leaf (*Mentzelia*), several lupines (*Lupinus*), several milk-vetches (*Astragalus*), a scor-pion-weed (*Phacelia linearis*), perennial gilia (*Gilia aggregata*), a balsamroot (*Balsamorhiza*

hirsuta), narrowleaf fleabane (*Erigeron linearis*), several star-thistles (*Centaurea*) and desert pink (*Stephanomeria tenuifolia*). Other more mesophytic shrubs of wider distribution occur in the less arid portions.

Columbia Forest Region.—A large part of the Kootenay River Valley, the upper valleys of the Thompson and Fraser Rivers, and the Quesnel Lake area of British Columbia are included in this Region. Upon encountering the mountains of this area (roughly from south to north, the Selkirk, Purcell, Monashee, Columbia and Cariboo ranges), the eastward-moving Pacific air masses rise, cool, and condense moisture, resulting in what is known as the "Interior Wet Belt". Up to an altitude of about 4,000 feet, the forest bears a strong resemblance to that of the Pacific Coast, dominated by western hemlock (*Tsuga heterophylla*) and western red cedar (*Thuja plicata*), with varying amounts of Douglas fir (*Pseudotsuga mucronata*), western white pine (*Pinus monticola*), lodgepole pine (*P. contorta* var. *latifolia*), Engelmann spruce (*Picea engelmannii*), and alpine fir (*Abies lasiocarpa*) and, in the southern section, scattered grand fir (*Abies grandis*) and western larch (*Larix occidentalis*). Black cottonwood (*Populus trichocarpa*) favours recent alluvial soils.

Climatically similar to the Coast Forest Region and with its valleys interpenetrating the Montane and Subalpine Forest Regions, the shrubby and herbaceous vegetation of the Columbia Forest Region is very similar to that of these other Regions, although the Selkirks, being rather a plateau with emergent peaks, afford a remarkable development of alpine meadows, with the characteristic plants of such higher Regions.

Alpine Floral Region.—This Region includes all of the mountainous areas above the tree-line (in general, above the 3,000-foot level on Vancouver Island and the adjacent Coast Range to above the 5,000-foot to 6,800-foot level in the Selkirks and Rockies). Many alpine species are also circumpolar in arctic regions and constitute a group known as arctic-alpine. The Canadian distributions of three arctic-alpine species, alpine bistort (*Polygonum viviparum*), snow draba (*Draba nivalis*) and woolly fernweed (*Pedicularis lanata*), and three alpine species, Lyall's saxifrage (*Saxifraga lyallii*), heartleaf arnica (*Arnica cordifolia*) and Hooker's mountain avens (*Dryas hookeriana*), are shown in the *Atlas of Canada* (1957, sheet 38, maps 2 and 9).

In addition, the following are representative of the rocky summits, ledges and talus slopes above timber-line: several grasses of the genus *Poa*, many sedges (*Carex*), several rushes (*Juncus*; *Luzula*), dwarf willows (*Salix*), umbrella-plants (*Eriogonum*), mountain-sorrel (*Oxyria digyna*), sandworts (*Arenaria*), alpine bitter cress (*Cardamine bellidifolia*), several drabas (*Draba*), roseroot (*Sedum roseum*), several cinquefoils (*Potentilla*), luetkea (*Luetkea pectinata*), several locoweeds (*Oxytropis*), black crowberry (*Empetrum nigrum*), several willow-herbs (*Epilobium*), four cassiope (*Cassiope*), glandular Labrador-tea (*Ledum glandulosum*), alpine azalea (*Loiseleuria procumbens*), three mountain heaths (*Phyllodoce*), Lapland rosebay (*Rhododendron lapponicum*), dwarf blueberry (*Vaccinium caespitosum*), bog blueberry (*V. uliginosum*), a scorpion-weed (*Phacelia sericea*), alpine speedwell (*Veronica alpina*), beard-tongues (*Pentstemon*), several everlastings (*Antennaria*), several arnicas (*Arnica*), alpine hawk's-beard (*Crepis nana*), several fleabanes (*Erigeron*) and several ragworts (*Senecio*).

Moist or wet alpine meadows, particularly in the Selkirks, commonly harbour such mesophytic species as alpine timothy (*Phleum alpinum*), cotton-grasses (*Eriophorum*), sedges (*Carex*), western dog's-tooth-violet (*Erythronium*), Indian hellebore (*Veratrum eschscholtzii*), rein-orchises (*Habenaria*), western pasque-flower (*Pulsatilla occidentalis*), white marsh-marigold (*Caltha leptosepala*), a buttercup (*Ranunculus eschscholtzii*), globe-flower (*Trollius latus*), a grass-of-Parnassus (*Parnassia fimbriata*), a saxifrage (*Leptarrhena pyrolifolia*), fern-weeds (*Pedicularis bracteosa* and *P. groenlandica*), Sitka valerian (*Valeriana sitchensis*) and arnicas (*Arnica*).

Typical lists of alpine and subalpine floras as observed in Jasper and Banff National Parks, Alta., are given by Porsild (1959). Underhill (1961) has prepared an illustrated guide to some of the alpine plants of Manning Provincial Park, B.C., near the Washington boundary.

Arctic Barren Grounds Floral Region

Botanically, the Canadian Arctic is generally regarded as comprising the treeless region along the northern mainland and the numerous islands of the Arctic Archipelago (see map). Its southern boundary, shown in the map by Porsild (1951a, p. 11), coincides with the northern limits of the transcontinental boreal coniferous forest, and is so indicated in the maps referred to above, as well as in the map plotted by Hustich (1953) showing the northern limits of white and black spruce. Rousseau (1952) has used plants as the basis of his separation of the Quebec-Labrador area into arctic, hemiarctic, and subarctic divisions, each with several subdivisions.

Many species are endemic (confined) to the Arctic, some have alpine stations farther south and others are of wide distribution in Canada. Porsild (1957 and 1964) has published maps of the ranges of the 340 species and major geographical races found in the Canadian Arctic Archipelago (representing 115 genera distributed among 38 families). In an earlier paper, basing his calculations on the total of 327 species then known in the Archipelago, Porsild (1955) classed 143 species (43.9 p.c.) as belonging to a widely distributed circumpolar group (33 high-arctic, 42 arctic-alpine, and 68 low-arctic). North American species comprised 58 North American Radiants, 10 Cordilleran Endemics, 26 Arctic Archipelago Endemics, 10 Western Arctic Endemics, 16 Eastern Arctic Endemics, 15 Amphi-Bearingian species, 17 northern Amphi-Atlantic species, and 31 southern Amphi-Atlantic species. The significance of these categories is pointed out in the discussion entitled "Plant Distribution" (p. 51). Polunin (1940) lists 297 species for the botanical Arctic east of about 97° West Longitude. For a general account of the vegetation and ecology of the Canadian eastern Arctic, see Polunin (1948).

In addition to climatic factors of the botanical Arctic dealt with in a general manner in the discussion of "The Plant Environment", two features deserve special attention—permafrost (permanently frozen ground) and the effect on vegetation of soil frost phenomena.

The map accompanying the paper by Jenness (1949) indicates the southern limits of permafrost in Canada as roughly coinciding with the -5° C isotherm of mean annual temperatures. Extensive areas of permafrost are depicted as extending as far south as Fort Severn on the south coast of Hudson Bay, while patches are shown as far south as the middle of James Bay. Jenness writes that, "Permafrost seems to affect vegetation mainly in two ways. Wherever the active layer is shallow, the frozen ground represses all deep-rooted species and limits growth to those that have shallow roots. Of Canadian trees, spruce (both black and white), balsam, poplar and the birches are all shallow-rooted, and all will grow above the permafrost. . . . The second way in which permafrost affects vegetation is through its influence on drainage. Because it provides an impervious base to subsurface water, it confines drainage to the shallow active layer. . . . In such areas ground-water eliminates all but the most water-loving species. . . . Porsild believes, however, that were the soil not so waterlogged, it would revert to barren desert on account of the climate. And it is the permafrost that keeps it waterlogged." By "active layer" is meant the top section subject to annual freezing and thawing, thus not part of the permafrost proper.

According to Benninghoff (1952), "Soil surfaces are in places rendered unavailable to plants or to certain kinds of plants because of soil stirring, sorting and transport by frost action. Patterned ground, i.e., surfaces with polygons, pitted tundra, soil stripes, and similar features, gives striking demonstrations of these effects. . . . Plants affect soil frost phenomena most significantly through controls exercised on the thermal regime of the soils, and these controls and resultant effects are probably different for all natural sites. . . . Plant succession in temperate regions tends to establish more mesophytic conditions in which drainage relations are less extreme. But in regions of severe frost climate, plants commonly generate conditions of extreme lack of drainage and greatly intensified soil frost. . . . Because of soil frost changes following disturbance, the affected surface and the local environment may be so greatly modified that entirely different communities occupy the site for unknown periods of time."

Porsild (1951a) believes that such soil conditions, combined with the shortness of the growing season, the scarcity of soil and the low precipitation, affect plant growth more than the actual air temperature. He notes that absorption of heat by the vegetation and dark-coloured soil may raise the actual temperature of the surface soil and the air surrounding the plant as much as 25 or even 40 degrees F. above that of the air higher up. Also, many arctic plants are able to recover from complete freezing, thus extending the length of their growing season into those months whose first frosts would kill or make dormant plants adapted to higher temperatures

He notes that "Many arctic plants are xerophytes: plants adapted to withstand prolonged drought by having rather small, often leathery leaves or by having their leaves and stems covered by densely matted hairs that provide a felt-like covering for the stomata. . . . As protection against desiccation rather than low temperatures, the wintering buds of many arctic plants are placed just below the surface of the soil (hemiscryptophytes), or just above the surface where they are protected by the persisting leaves, leafstalks or stipules of former years (chamaephytes). . . . By their low and compact growth habit (cushion plants), arctic plants are well adapted to resist desiccation and mechanical abrasion by wind and by drifting snow and sand."

The commonness of vegetative reproduction among arctic plants through creeping rootstocks or adventitious roots and buds allows many of them to propagate even in years with exceptionally severe climates. Nodding saxifrage (*Saxifraga cernua*) and alpine bistort (*Polygonum viviparum*) frequently have all or most of their flowers replaced by bulbils that fall off and take root.

Porsild recognizes four major plant communities in the Canadian Arctic: rock desert or fell-field communities (rock deserts: unstable talus slopes or scree; gravelly river flats and fans), tundra communities (heaths: grasslands: willow and alder thickets: marsh and wet tundra: snowflashes), strand communities (lagoon and salt-marsh: sand dunes and gravel beaches: rocky shores), and freshwater communities (ponds and lakes; brooks and rivers).

Growing among the numerous lichens of the rock deserts may be found small ferns (*Dryopteris fragrans*; *Woodsia glabella*; *W. ilvensis*), large mats of crowberry (*Empetrum nigrum*), cotton-grass (*Eriophorum vaginatum*), and a "rock garden" of plants with brightly coloured flowers such as moss pink (*Silene acaulis*), arctic poppy (*Papaver radiatum*), species of *Draba*, saxifrages (*Saxifraga*), *Hedysarum mackenzii*, locoweeds (*Oxytropis*), alpine milk-vetch (*Astragalus alpinus*), river-beauty (*Epilobium latifolium*) and large-flowered wintergreen (*Pyrola grandiflora*).

The tundra communities are characterized by tussocks or 'nigger-heads' of various grasses and sedges, arctic lupine (*Lupinus arcticus*), fern-weeds (*Pedicularis*), sweet coltsfoot (*Petasites frigidus*), and various members of the Heath Family such as Labrador-tea (*Ledum decumbens*), Lapland rhododendron (*Rhododendron lapponicum*), bearberry (*Arctostaphylos alpina* and *A. rubra*), white heather (*Cassiope tetragona*), bilberry (*Vaccinium uliginosum*), and alpine cranberry (*V. vitis-idaea*), the bushes of the thicketed areas being dwarf birch (*Betula glandulosa*) and various willows (*Salix*), with some alder (*Alnus crispa*) in the southern area. Alpine clubmoss (*Lycopodium alpinum*), a dwarf willow (*Salix herbacea*), mountain sorrel (*Oxyria digyna*) and dwarf buttercup (*Ranunculus pygmaeus*) are common in snowflashes.

Halophytic (salt-loving) grasses, sedges and rushes characterize the coastal lagoons and salt-marshes of the strand communities, with an admixture of sweet-scented white buttercup (*Ranunculus pallasii*), white marsh-marigold (*Caltha natans*), and a few other marsh herbs. Lyme-grass (*Elymus mollis*) is common on gravel beaches and sand dunes, together with other grasses, a few halophytic sedges, beach sandwort (*Arenaria peploides*) and a few species of willow. On rocky shores are found dense carpets of goose-grass (*Puccinellia*), together with scurvy-grass (*Cochlearia*), chickweed (*Stellaria humifusa*) and a few species of willow.

Larger ponds and lakes are nearly all too cold to support vascular aquatic plants but possess a rich microscopic algal flora. In smaller ponds may be found pondweeds (*Potamogeton*), aquatic buttercups (*Ranunculus hyperboreus*; *R. aquatilis*) and mare's-tail (*Hippuris vulgaris*). Most brooks and streams are too cold or turbulent for vascular plants but protected stream margins and floodplains may support various grasses and sedges.

The Plant Environment

For tables and maps dealing with the climate of Canada, reference may be made to the *Climatological Atlas of Canada* (Thomas, 1953). More recent maps of various climatic zones (as well as of forest regions, vegetation zones, typical plant ranges and ranges of the principal commercial trees) are to be found in the *Atlas of Canada* (1957). The present paper is concerned with certain less obvious ways in which variously interacting factors may affect the climate and plant distribution of a region, matters of the utmost importance in interpreting the various distributional patterns of Canadian plants.

Temperature.—A factor of prime importance in its general effect on the Canadian climate is the distribution of heat by ocean currents, opposite extremes of which operate along the Pacific and Atlantic Coasts. The warm waters of the Japanese current exert a profoundly ameliorating effect in their northerly flow against the northern part of the Pacific Coast. This, combined with the huge volumes of relatively warm water discharged by the Mackenzie River system into its extensive delta bordering the Arctic Ocean, results in mean annual temperatures in southern Yukon of approximately the same magnitude as those in the Gulf of St. Lawrence region of the Atlantic Coast, fully ten degrees of latitude farther south. Here, the cold waters of the Greenland and Labrador currents flow southward along the Atlantic Coast, markedly lowering temperatures and producing weeks of cold rain and fog.

The opposite effects of the Atlantic and Pacific currents explain the fact that maps of temperature isotherms indicate an increasingly steep northwesterly trend from east to west, due allowance being made for the depressing effect of the cold waters of Hudson Bay. It is immediately apparent that the southern boundary of the botanical Arctic Region by no means corresponds with the geographic Arctic Circle except to some degree in the extreme northwest. As is well known, temperature is one of the most important factors in the distribution of plant life, provided such other factors as precipitation, wind velocity, length of daylight, altitude, soil composition, and competition do not exert a 'limiting' effect. The southern boundary of the botanical Arctic, as pointed out previously, is generally regarded as approximately the average of the northern limits of white spruce (*Picea glauca*) and black spruce (*P. mariana*). These lines reflect the northwesterly trend of temperature isotherms in the same latitudes, coinciding roughly with the 50° F. isotherm of mean monthly temperatures. As pointed out by Porsild (1951a), however, "... large parts of the 'barren grounds' are treeless not because of an insufficient summer temperature but more likely because of insufficient precipitation during summer, coupled with high frequency of winds and extreme dryness of the air during winter". A precise correspondence between temperature isotherms and boundaries of biotic regions is not to be expected.

There is also strong evidence that secular or cyclic changes of temperature are still occurring following the Pleistocene epoch and that floristic boundaries have not yet reached a state of equilibrium. Griggs (1934) presents strong evidence that the forest in Alaska is pushing northward into the tundra. He concludes from pollen studies that the advance is a secular one in the nature of recovery from the last era of glaciation during a period of gradual improvement in climate, rather than a cyclic one with the "... unstable forest border slowly swinging back and forth like a pendulum now favored for a few hundred years, now driven back again by adverse conditions...".

The accompanying map places most of the interior of the Gaspé Peninsula of Quebec in the coniferous Boreal Forest Region, whereas large coastal strips are placed in the Great Lakes-St. Lawrence Forest Region, characterized by such northern hardwoods as

maple, oak, elm, beech and ash. Sugar-maple (*Acer saccharum*) and red oak (*Quercus borealis*) form isolated stands in this coastal region. Beech (*Fagus grandifolia*) is found only in the southwestern extremity of the peninsula. Dansereau (1944) believes that these coastal hardwood stands are remnants of a former more widespread deciduous forest of a post-glacial warm period. A discussion of this supposedly *xerothermic* period is given by Raup (1937) and Sears (1942). A distinct amelioration of climate (with subsequent deterioration) is generally accepted to have occurred in Greenland, Iceland and Scandinavia in post-Pleistocene times. The existence of such a warm post-glacial period in eastern North America is supported by the finding of pollen of the hemlock (*Tsuga canadensis*) at Matamek, on the north shore of the Gulf of St. Lawrence, several hundred miles from its present limits. The persistence in Newfoundland of such southern Coastal Plain species as curly-grass fern (*Schizaea pusilla*) and broom-crowberry (*Corema conradii*) also points to a relatively recent climate of more temperate nature, as has the discovery of logs buried in a bog at Blanc Sablon, southern Labrador, some miles from the present edge of the forest. In accordance with the present differences in climatic conditions between Western and Eastern Canada, however, Savile (1963) notes several factors in addition to low temperatures that evidently contribute to the inability of white spruce (*Picea glauca*) to spread into the barrens in the vicinity of Great Whale River, on the southeast coast of Hudson Bay.

Precipitation-Evaporation Ratio.—Another climatic factor of great importance in regions with comparatively little rainfall is the relationship between precipitation and evaporation, rather than precipitation alone. Under certain conditions, a few inches of rainfall may be sufficient for a plant to complete its life cycle. However, if high temperatures or high winds cause abnormally rapid evaporation from a plant (transpiration), it may wilt and die, particularly in the seedling stage.

In order to map climatic provinces that would correspond to observed biotic provinces, Thornthwaite correlated evaporation measurements made at twenty-one meteorological stations in the United States with the corresponding monthly precipitation and mean monthly temperature at the same stations. By so doing, he was able to devise a formula that allowed the computation of the P-E ratio (monthly precipitation divided by monthly evaporation), and hence, the P-E index (sum of the twelve P-E ratios). Plotting the indices on a map, and drawing isopleths, he divided North America into the humidity provinces Wet, Humid, Sub-humid, Semi-arid and Arid.

The Boreal Forest Floral Region falls into Thornthwaite's "taiga" Climatic Province, with some overlapping into the more northerly "tundra" Climatic Province, both provinces being characterized by the limiting factor of low temperatures, precipitation being usually adequate for plant growth. The Acadian Forest Floral Region falls within his Wet Microthermal Climatic Province, characterized by suitable temperatures and adequate precipitation at all seasons for plant growth. The Great Lakes-St. Lawrence Forest Floral Region falls within his Humid Microthermal Climatic Province with suitable temperatures although somewhat less (but adequate) precipitation. The Deciduous Forest Floral Region is included by Thornthwaite in the latter province but, botanically at least, gives strong indication of being a northern outlier of his warmer Humid Mesothermal Climatic Province. The northern (parklands) part of the Prairie Grasslands and Parklands Floral Region coincides in general with the Sub-humid Microthermal Climatic Province (temperatures suitable, precipitation usually adequate) while the southern part falls within his Semi-arid Microthermal Climatic Province (temperatures suitable but precipitation usually deficient and limiting plant growth). Large parts of the western floral regions fall within Thornthwaite's Wet (Coast Forest) and Humid (interior forests) Microthermal Climatic Provinces. The remarkable Dry Interior of British Columbia, a broad belt extending northward to Kamloops and beyond, is placed in his Sub-humid Microthermal Climatic Province but is undoubtedly a continuation northward of his Semi-arid Microthermal Climatic Province with deficient precipitation. Rainfall at Kamloops during the growing season is usually less than five inches. Sagebrush (*Artemisia tridentata*), antelope-brush (*Purshia tridentata*) and western yellow pine (*Pinus ponderosa*)

are characteristic plants of this dry belt. It should be remembered that Thorntwaite's map comprises broad generalizations because of the extensive area covered. He did not attempt to show local differences. Concerning local refinements of the Climatic Provinces as illustrated in the Gaspé Peninsula of Quebec, see Scoggan (1950, p. 17).

Hours of Daylight.—A third climatic factor should be mentioned, namely, length of daylight. Being chiefly 'long-day' plants, arctic and alpine species are able to complete their annual life cycle during the relatively short snow-free growing season because of the long period of daylight during the arctic summer or at high altitudes farther south. They flower rapidly in their natural habitat but flowering is inhibited if they are transplanted or grown from seed in lower latitudes or altitudes. On the other hand, many southern species are 'short-day' plants and will produce flowers only in the autumn when days become shorter. However, by an artificial shortening of the exposure to daylight, they may be made to bloom at the beginning of summer.

Plant Distribution

In addition to the climatic factors that obviously influence the distribution of plants, there are other factors such as soil composition, biotic factors (genetical constitution and competition with other plants), and historical factors (glaciation and post-glacial submergence) that greatly modify what should otherwise be rather regular plant distributional patterns. These factors are discussed concurrently, because the attempted explanation of some of the most interesting problems of plant distribution in Canada involves their mutual interplay.

Practically the whole of continental Canada was at one time or another covered by ice-sheets during the Pleistocene era, now believed by many geologists to have terminated not more than about 10,000 or 15,000 years ago. In addition, large bodies of fresh water, dammed up by the retreating ice-fronts, made plant immigration impossible for long periods of time following the glaciation. Glacial Lake Agassiz, for example, the forerunner of the present-day Lakes Winnipeg, Manitoba and Winnipegosis, at one time covered the entire Manitoba Lowlands, extending at its maximum to approximately 55° N and including the upper part of the present Nelson River system. It is estimated to have covered the present site of Winnipeg to a depth of 600 feet at the time of formation of its highest beach. The flat, smooth topography of the Manitoba Lowlands is the result of the deposition of silts and clays in Lake Agassiz, which, during its various phases of drainage, established the many beaches now traceable along the Manitoba Escarpment as gravel ridges or wave-cut terraces.

In Manitoba, then, the period available for recolonization of extensive parts of the land by plants may be of the order of only about 5,000 years. Concerning deglaciation of the region north of the Great Lakes, Terasmae (1960) notes that radiocarbon dating suggests that the North Bay outlet, by which the melted water was discharged to the east by way of the Mattawa and Ottawa river valleys, opened about 10,000 years ago. It appears definitely established that entire plant associations can migrate at a relatively rapid rate into new territory when not competing with other associations.

It is interesting to note along the shores of the eastern Great Lakes such typical coastal halophytes as sea-rocket (*Cakile edentula*), beach-pea (*Lathyrus japonicus*) and seaside-spurge (*Euphorbia polygonifolia*), evidence that the post-glacial Lake Champlain allowed waters of the Atlantic Ocean to reach this far inland before isostatic recovery of the land from its tremendous load of ice. Potter (1932) and LaRocque (1949) have used halophytic plants as one of their criteria in discussing the possibility of a post-Pleistocene marine connection between James Bay and the Champlain Sea. Schofield (1959) discusses the salt-marsh vegetation of Churchill, Man., and its phytogeographic implications.

Hultén (1958) has published 278 excellent maps showing the distribution of "amphi-Atlantic" species (those that occur chiefly off the eastern and western edges of the Atlantic Ocean but are elsewhere usually of rather limited range). Many of these species are

extremely localized in eastern North America. Conversely, an orchid, the hooded ladies'-tresses (*Spiranthes romanoffiana*), is of transcontinental range in North America, with a few 'relic' stations in Ireland and northern Scotland. He believes that amph-Atlantic species were formerly essentially circumpolar, with their area reduced by the last glaciation to the present one. Many of these species are apparently identical on both sides of the Atlantic but some are represented in one of the areas by closely related but morphologically distinct species or varieties, in this latter case forming pairs of 'vicariads' or corresponding but geographically widely separated forms.

Hultén (1960) has also published maps showing the ranges of 228 circumpolar plants, most of which occur in Canada (a few only in the United States in North America). He had previously published (1937) a treatise with maps entitled *Outline of the History of Arctic and Boreal Biota during the Quaternary Period*, dealing with "their evolution during and after the glacial period as indicated by the equiformal progressive areas of present plant species". His Plate 11 of North Beringia Radiants, for example, superimposes upon one another the ranges of 28 species of plants supposedly derived from an original "centrum" in the Bering Sea region. Of these, those still confined to Alaska are only slightly differentiated from similar more widespread species found elsewhere, and are considered by Hultén as doubtless young species that have arisen probably not earlier than during the last inter-glacial period. Mountain avens (*Dryas integrifolia*) and three-toothed saxifrage (*Saxifraga tricuspidata*), however, now range across Canada to Greenland, and, being extremely characteristic and well differentiated, must be very old species. Their areas were reduced during the several phases of glaciation but they still had large areas at their disposal, spread from there during inter-glacial phases and, following the last ice-sheet, the Wisconsin, have spread southward over the formerly glaciated area. Hultén's Plate 16, likewise, indicates the probable derivation of 74 "Western American Coast Radiants" from a centrum in the Bering Sea region, while his Plate 17 indicates a similar centrum for species some of which now range as far east as Manitoba and Ontario. Such work is of great interest in helping to solve problems of migration of Canada's plants, being reflected in Sheet 38 of the *Atlas of Canada* (1937), compiled by A. E. Porsild and the present writer, showing the "progressive areas" in Canada of several species in each of the following groups: high-arctic; arctic; Arctic Archipelago endemics; eastern Arctic endemics; western Arctic endemics; arctic-alpine; low-arctic; amph-Atlantic (northern element); amph-Atlantic (southern element); amph-Beringian; boreal forest; Pacific coast; prairie and foothill; and disjunct species.

Concerning this sheet of maps, Porsild (1958) writes: "When the ranges of the plants of which the flora of Canada is composed are plotted on maps, it at once becomes clear that the species may be sorted into regional groups having similar ranges. Climate, soil and topography affect the local ranges of the species within the groups, but the groups themselves obviously have a common historical background. Some species thus have a distinctly eastern and some a distinctly western range, others are wide-ranging, whereas still others again are peculiar or endemic to smaller and restricted areas". He notes that many North American plants occur also in Eurasia (often their main area) and that many plants of northwestern North America also occur in eastern Asia, these plants having been present in North America before the ice age because a wholesale transatlantic migration in post-glacial time was impossible.

The areas of North America generally accepted as having served as plant refugia during at least the last stage of Pleistocene glaciation are large parts of Alaska and Yukon, the northern tip of the Queen Charlotte Islands, some alpine regions of British Columbia, the northern islands of the Arctic Archipelago, and probably at least some of the higher mountains of Labrador, these together forming a 'rainbow' within whose hollow plant life was virtually eliminated.

Much interest was aroused among plant geographers by the publication by Fernald (1925) of a lengthy paper entitled *Persistence of Plants in Unglaciated Areas of Boreal America*. Fernald pointed out that the Gulf of St. Lawrence region (particularly the calcareous plateau of the Long Range of western Newfoundland and the calcareous sea-cliffs

and river-gravels of the Gaspé Peninsula of Quebec) included in its flora a large number of species separated from their main area in the western Cordilleras by more than two thousand miles. Mountain avens (*Dryas drummondii*), for example, occupies a large area extending from north-central Alaska to Great Bear Lake and Lake Athabasca south to Oregon and Montana. It is known otherwise only from Quebec (Gaspé Peninsula; Anticosti Island; the North Shore of the Gulf of St. Lawrence; Lake Mistassini) and western Newfoundland, with an intermediate station in the 'driftless' region about the Great Lakes (Slate Island, Lake Superior). Fernald lists a large number of additional western and endemic (of local or restricted range) species centring about the Gulf of St. Lawrence, the endemics being mostly very closely related to their western counterparts.

Fernald's contention, later known as the *nunatak theory* (from the Eskimo word for a mountain projecting out from an ice-cap), was that the areas in which these western plants or representatives of western plants are found today escaped glaciation during Pleistocene times, the plants surviving there as relicts but being wiped out more westerly as far as the Cordilleras, except often for stations in the driftless area about the Great Lakes known to have escaped glaciation. This theory appeared, at the time, to provide a most satisfactory explanation to many puzzling problems of plant distribution in Eastern Canada. However, field investigations have since drastically reduced the number of species with such disjunct areas, although the problem posed by the remaining "Cordilleran" species in the east still remains.

The extreme localization in Eastern Canada of many of the western species seemed to Fernald to be proof of a more or less senescent condition attendant upon their great age. They appeared to have lost the capacity to migrate, if not actually to propagate sufficiently for continued survival. However, Marie-Victorin (1938) pointed out that several western plants, when grown in limestone beds at the Montreal Botanical Garden, increased their area and thrived vigorously until crowded out by weeds at the termination of the experiment. It had already been noted by several botanists, including Griggs (1934a; 1940), that weeds are often found in the same habitat as rare plants. Species of both groups are adapted to survive on such typical rare plant habitats as unstable sea-cliffs and river-gravels but would be eliminated if the erosion cycle were able to reach a stage permitting establishment of the normal forest flora of the region. The rare plants share the sun-loving character of weeds. The limestone cliffs, because of their splintered and angular type of weathering (with formation of extensive talus slopes at the base) will still bar conquest by the forest for an indefinite period. The rare plants, like the weeds, appear as a whole to be quite as well equipped for seed or spore dispersal as many plants of more widespread occurrence but are quite unable to withstand competition with the forest species.

Wynne-Edwards (1937) notes the very significant fact that eastern Canadian plants of western affinity are found almost entirely upon calcareous or magnesian rocks of a basic reaction, as opposed to the siliceous, acidic rocks of the Canadian Shield. Such calcareous formations are characteristic of the Cordilleras, the Arctic Archipelago, and the mountains of northeastern Labrador (and also the driftless area about the Great Lakes), the whole pattern coinciding quite neatly with the rainbow-shaped area attributed above to non-glaciated regions of Canada. He believes that the disjunct ranges of the rare plants are better explained as resulting from their lime-loving nature rather than from differences in their Pleistocene history.

The rare plants as a whole appear to be quite as well equipped for seed or spore dispersal as most plants of more widespread occurrence. The minute spores of the rare ferns are as definitely adapted to wind distribution as those of all ferns. The cotton-tufted seeds of the willows and the plumed fruits of mountain avens (*Dryas drummondii*) furnish almost equally good examples. Their restricted area in the east would seem to be a result of the scarcity of suitable habitats rather than of a state of senescence because of old age. The tables given by Scoggan (1950) showing the results of determinations of available

calcium and hydrogen-ion concentration in water collected in various regions of eastern Quebec illustrate the striking difference in chemical nature between calcareous and acidic rock formations.

Porsild (1955) also refers several of the discontinuous distributions of Arctic species to soil factors: "A glance at maps showing the distribution of certain North American species will at once disclose that many obligate calciphiles are absent from the acid Archaean rocks of the Laurentian Shield area (e.g., *Braya humilis* and certain other species in the *Cruciferae*) but are found on the younger and largely Palaeozoic sediments around the periphery of the Shield. On the other hand, a large number of typically oxylophytic species, notably among the *Ericaceae* and among ferns and fern-allies, may be ubiquitous on the acid rocks of the Shield but absent on the surrounding calcareous sediments. Edaphic discontinuity is even more pronounced in the Arctic, where, because of climatic conditions, such as low temperatures and low precipitation, organic soils in the form of humus, turf, or peat bogs are either lacking or at best feebly developed. . . ."

"In the Arctic, the problem of edaphic discontinuity is further complicated by the fact that warmth-loving plants near the northern limits of their ranges tend to become facultative calciphiles, often confined to stony, calcareous soils. The reason may be that these soils alone afford them optimal physical conditions of temperature, water supply, and aeration." Further elaboration of this and other aspects of arctic ecology is given in papers by Griggs (1914; 1934) and Raup (1941).

A noteworthy characteristic of the rare eastern limestone floras is their variability in species from one station to another, in contrast with the more or less uniform old-established flora to be expected on the basis of the nunatak theory. As noted by Wynne-Edwards, this would result from the relatively short time during which recolonization of the scattered stations has been in progress, or, in some cases, from reduction to the last and coolest habitats. He also believes that the presence of endemics in the arctic-alpine flora of eastern North America offers no positive evidence in support of the nunatak theory. Rather than indicating great age of the flora, this phenomenon can be better correlated with the specialized soil preference of the plants. Their invasion of an area must progress by leaps from one suitable habitat to another, and a station may sometimes be colonized by the progeny of a single seed, an ideal condition for the segregation of different types. Palmgren (1929), in a paper entitled *Chance as an Element in Plant Geography*, writes, "It depends in a high degree on chance whether a plant will succeed in gaining a foothold in time, before the vegetation becomes closed and a more or less effective obstacle to the entering of new elements is established. . . . A rare species may be found on a certain spot, but is wanting in other quite similar places in the neighbourhood". This is supported, in the case of the rare plants of the Gaspé Peninsula of Quebec, by a table constructed by the writer (Scoggan, 1950, p. 24) noting the occurrence (presence) of 125 calciphilous species in 10 typical sea-cliff and 10 typical river-gravel habitats. Almost half of the 109 sea-cliff species were found in only one or two of their ten stations and over a third of the 80 river-gravel species were found in only one or two of their stations. Over half of the total of 125 species were found in not more than four of the 20 stations. This is in sharp contrast to more stabilized and crowded communities such as those of the climax forest or the heath bog. The uniform ericaceous flora of heath bogs has been noted in the discussion of the Boreal Forest Floral Region. In such a habitat, ground coverage is practically 100 p.c. and the ability to colonize is possessed by a specialized flora able to withstand strong competition and a highly acidic substratum.

It was Palmgren who introduced the concept of 'minimum area' into phytogeography, a concept that has since played an important part in the statistical analysis of vegetation. Its basic tenet is that, for a particular plant association, a certain minimum area is required before that association can comprise the requisite number of different species by which it is distinguished from other plant associations. Obviously, for the heath bog association, this minimum area will be relatively small. Most or all of the typical bog species will probably be found on any tenth of an acre tested. 'Presence' is high, each species occurring in nearly all sample stands of the community. 'Fidelity' is also high,

most bog species being more or less restricted to the acid heath bog habitat. In the case of the calciphilous plants, presence, as already noted, is low, but fidelity is high because of their restriction to calcareous habitats.

Greater youth even than the time dating from Wisconsin deglaciation seems to be a characteristic of the habitats of many rare plants. Wynne-Edwards has called attention to the necessity of accepting post-Wisconsin invasion in the case of certain typical Cordilleran species such as *Salix vestita*, *Dryas drummondii* and *Anemone multifida*, which are found on Anticosti Island and the Mingan Islands, places buried by the thick ice-sheet, as shown by grooves, striae and erratics, as well as submerged under the post-Wisconsin Champlain Sea. There is also strong geological evidence that at least some of the intermediate Great Lakes stations have undergone glaciation, as well as post-glacial submergence.

Attention might be drawn at this point to the occurrence on the serpentine tableland of Mount Albert, in the Gaspé Peninsula, Que., of a flora obviously specialized to the serpentine habitat. The writer (1950) lists 17 species of this area. The ability to survive on serpentine is apparently restricted to a rather few species (or ecotypes of the species) and many plants that are aggressive outside the serpentine area cease immediately at its boundary. Rune (1954) notes that the infertility of serpentine soils is due not only to their low nutritional content but also to their comparatively high content of nickel and chromium, a factor toxic for most plants.

The question of polyploidy (multiplication of the basic chromosome number) in relation to plant distribution merits some attention. A 'diploid' is a plant or animal whose body cells contain paired chromosomes, the total number of chromosomes being twice that found in the sex cells. A 'polyploid' is a plant or animal whose body cells contain three or more times the number of chromosomes characteristic of the sex cells. The theory has been advanced that severely cold climates may induce the formation of polyploids. There is evidence to show that, in general, polyploids are more hardy than diploids, and that they are more abundant in high northern regions.

The probability is that some of the rare species may consist of only one or a few polyploid 'ecotypes' unable to survive except under the peculiar conditions to which they are adapted. The hardships to which they were subjected while being forced southward by the Wisconsin ice-sheet may have substantially depleted the biotype stock, and subsequent inbreeding may in some cases have further sharply defined the species from ancestral types. According to Stebbins (1942), certain of these ecotypes may have been eliminated through combinations of recessive genes expressing themselves phenotypically as non-adaptive characteristics.

Löve and Löve (1949) have discussed *The Geobotanical Significance of Polyploidy*, giving in their summary 20 of the general features of polyploids, among which are an increase in polyploids with higher latitude or altitude, an increased adaptability of polyploids to climatic extremes of temperature and moisture, and a high frequency among glacial survivors in Scandinavia, Iceland and Spitsbergen.

According to Cain (1940), "With respect to the effects of glaciation, we may suppose a history somewhat as follows: In the general vicinity of the glacial boundary old diploid species, formerly well isolated, are brought together because of the vicissitudes of forced migrations. In such a region, especially after glacial recession has commenced, there are numerous new, variable and closely associated habitats in which populations of a variety of species can live in rather close proximity. The result of this intermingling of species may be the production of hybrids, followed sometimes by amphidiploidy. With continued glacial recession, the polyploids and backcrosses are in a position to expand their area tremendously. Some of the diploids also may extend far onto the glacial plain, but most of them will probably have only a limited expansion. The chances of such polyploids spreading into unglaciated territory to any considerable extent seem unlikely because penetration of closed communities is more difficult".

Camp (1944) expresses the opinion that "*East of the Continental Divide, V. ovalifolium* is a Pleistocene adventive, but with a series of disjunct (relic) stations the result of post-Wisconsin-times events...". The viewpoint expressed here is possibly applicable to various species in other groups, primarily western in distribution, which have eastern disjunct outposts. The great series of terminal and recessional moraines with their unsorted and talus-like materials—and at particular stages in the climatic and vegetation succession during each recovery of the floristic mantle—must have been ideal avenues for transcontinental plant migration. In any event, this broad morainic belt would have served as an ideal refugium south of the ice for those rare plants that, even today, are confined chiefly to the unstable sea-cliff and river-gravel habitats, free from invasion by the forest species that have crowded them out elsewhere. It may be that some of the less hardy rare plants used this southern migration route for their eastern migration after being eliminated in the broad intervening area, while the hardier ones persisted and accompanied the arctic circumpolar species in their southward march before the advancing Pleistocene ice-sheets. In advancing what has become known as his "rainbow theory", Marie-Victorin (1938) writes, "May not most of the so-called Cordilleran plants be just arctic migrants that for some reason or other have become extinct in the Arctic and have persisted at one or both ends of their migrating trails". Wynne-Edwards had already pointed out that the simple fact emerges that the flora of the arctic and subarctic zones of North America is made up of types that are circumpolar and types that are not circumpolar, and further that "Some of these plants have wide limits of climatic tolerance, occurring through a wide latitudinal range, in which case their American distribution takes the form of an arch spanning the continent from the Cordillera to the St. Lawrence by way of the Arctic; while others are more narrowly confined, the hardest occupying the crown of the arch and least hardy its two ends, whereby their ranges are disrupted into western and eastern centres".

The Atlantic Coastal Plain element in the flora of Newfoundland and Nova Scotia again emphasizes the importance of historical factors in the consideration of problems of plant distribution. Fernald (1918) notes the occurrence especially in sandy areas and acid bogs of Newfoundland of such characteristic species of the Coastal Plain of New England and New Jersey as the small grass-like fern, curly-grass (*Schizaea pusilla*), beachgrass (*Ammophila breviligulata*), various sedges, pipewort (*Eriocaulon septangulare*), a rush (*Juncus pelocarpus*), white fringed orchid (*Habenaria blepharoglottis*), broom-crowberry (*Corema conradii*), beach-heath (*Hudsonia ericoides*), huckleberry (*Gaylussacia dumosa*) and two asters (*Aster nemoralis* and *A. radula*). Surprising, however, is the absence in Newfoundland of such typically eastern Canadian plants as virgin's-bower (*Clematis virginiana*), common milkweed (*Asclepias syriaca*), large-toothed aspen (*Populus grandidentata*), striped maple (*Acer pensylvanicum*), sugar-maple (*Acer saccharum*), thoroughwort (*Eupatorium perfoliatum*) and certain goldenrods (*Solidago juncea* and *S. squarrosa*) and asters (*Aster acuminatus* and *A. macrophyllus*). He also notes a similar absence of the common moose, red deer, porcupine and spruce partridge, animals of the forests of the relatively close Canadian mainland to the west. Fernald advances the following explanation: "... the flora of Newfoundland, except such species as have been derived across the narrow Straits of Belle Isle, has not reached the island by ocean currents or by winds, especially from the west and southwest; for, if these factors were of importance in carrying the western and southwestern plants to Newfoundland, we should expect such species as I have named and which are all abundant at the eastern edge of Canada to have reached Newfoundland amongst the first invaders. In explaining the migration to Newfoundland of a large element from the Atlantic coastal plain of the United States it has been necessary to reconstruct the Tertiary continental shelf, which is now depressed as a shallow bench off the Atlantic coast of America; and from the botanical and zoological evidence, as well as from recently published geological evidence, it now seems perfectly settled that the continental shelf formed in the late Pleistocene and even later a nearly continuous although somewhat interrupted floor from New Jersey and southern New England, by way of Sable Island and the Grand Banks, to southern and eastern Newfoundland. And upon this floor the southern flora and fauna migrated to Newfoundland; but the unfavorable conditions of a sand-floor

with meager forest and coastal plain bogs and barrens proved unattractive to the life of our rich Canadian forest, with the result that the forest species of both animals and plants, or the species which demand rich or basic soils, were for the most part unable to cross to Newfoundland."

The Carolinian flora of southern Ontario has been the subject of a number of studies by Fox and Soper (1952-54) and Soper (1956; 1962). Soper and Maycock (1962) have investigated the phytogeography of an area along the north shore of Lake Superior, finding that most of the northern species appear to have an extensive gap in their range between that region and the shores of Hudson Bay and James Bay. They conclude that "The gap seems to be reasonable in terms of the flat lands of the northern Clay Belt and the boggy regions of the Hudson Bay Lowlands. Undoubtedly these species may eventually be discovered in other scattered localities in these central areas, but it is reasonable to assume that the disjunct nature of the distributions finds a counterpart in the lack of suitable environmental situations in those regions". The plants referred to are characterized by their preferences for open, rocky habitats free from forest competition, a condition analagous to that discussed above for the rare Cordilleran species of Eastern Canada, although the Lake Superior cliffs are the acidic Precambrian granites and gneisses of the Canadian Shield. Their smooth, rounded weathering and scarcity of soil are undoubtedly responsible for holding the forest in check.

Doris Löve (1959) has concluded that all of the vegetation of Manitoba was obliterated during the Wisconsin Ice Age (one of the phases of the Pleistocene epoch): that a grassland followed the ice withdrawal and a 'marsh-grassland' developed about 10,000 years ago (according to radiocarbon dating of wood from peat deposits of this stage) on the Lake Agassiz bottom following the drainage of its first stage toward the south; that a deciduous forest of elm, ash and aspen later developed around the shores of the second stage of Lake Agassiz; and that a western and southwestern prairie flora composed of various grasses, legumes and composites invaded the lake bottom following its final drainage northward into Hudson Bay while an arctic flora migrated southward and spruce forests spread over the Precambrian Shield, the forest penetrating during the last 2,000 years to invade the aspen belt and produce the present mixed forest. The past century has seen the transformation of the major area of prairie and marshland into a rich farm land. Ritchie (1956; 1957) has published the results of studies on the vegetation of northern Manitoba. He suggests tentatively in a later paper (1964) interpreting pollen spectra of the Riding Mountain area of southern Manitoba that "... the upland sites of the area were occupied by an initial closed forest, followed by a more or less closed treeless episode characterized by grassland vegetation, replaced by a deciduous forest episode with birch, poplar, and oak, culminating in a mixed spruce-deciduous forest closely similar to the vegetation of today". Earlier studies on the vegetation or ecology of the Prairie Provinces are noted by Adams (1936), but the paper entitled *Ecology of the Aspen Parkland of Western Canada*, by R. D. Bird (1961), deserves special notice.

Recent Botanical Publications

The earliest major floristic works dealing with the ferns and flowering plants of Canada were *Flora Boreali-Americana*, published in 1803 by André Michaux; *Flora Americae Septentrionalis*, published in 1814 by Frederick Pursh; and *Flora Boreali-Americana*, published between 1829 and 1840 by Sir W. J. Hooker. These were followed, between the years 1883 and 1890, by the appearance of John Macoun's *Catalogue of Canadian Plants*, a remarkable achievement for the day and a stimulus for greatly expanded botanical exploration.

Five provincial *Floras* in manual form are now available, with 'keys' for the identification of species. These are: *The Flora of Nova Scotia* by A. E. Roland (1947); *Flora laurentienne* (southern Quebec only), by Frère Marie-Victorin (1935—with a 1947 supplement of additions and corrections by Ernest Rouleau); *The Flora of Manitoba* by Homer J. Scoggan (1957); *Flora of Alberta* by E. H. Moss (1959); and *Flora of Southern British Columbia and Vancouver Island* by J. K. Henry (1915). Porsild (1957) published an *Illustrated*

Flora of the Canadian Arctic Archipelago and Hultén published *Flora of Alaska and Yukon* between the years 1941 and 1950. Mention should also be made of the excellent little manuals, *Wild Plants of Canada*, by Spotton, Cosens, and Ivey (1931), the handbook of selected native plants by Montgomery (1961) entitled *Wild Plants of Canada*, and *Wild Plants of the Canadian Prairies* by Budd (1957). United States manuals also furnish sources for the identification of Canadian plants. The most useful of these for Eastern Canada are those by Fernald (1950), Gleason (1958), and Gleason and Cronquist (1963); for Western Canada, those by Rydberg (1922; 1932), Abrams (1923-59) and Hitchcock *et al.* (1955-64).

Hugh Raup has conducted extensive floristic and ecological investigations in the Northwest, one of his major publications being *The Botany of Southwestern Mackenzie*, published in 1947, with numerous maps. Hustich has conducted such investigations in the Labrador-Ungava Peninsula. Similar publications and checklists (in addition to those published before 1945 and noted in Senn's 1945 revision of the 1936 paper by Adams) include those by the following authors: Rouleau (1956—whole of Newfoundland); Erskine (1960—whole of Prince Edward Island); Scoggan (1950—Bic and the Gaspé Peninsula, Que., with identification keys); Baldwin (1958, 1959 and 1962—Clay Belt and Boreal Forest region of Ontario and Quebec); Montgomery (1945—Waterloo Co., Ont.); Core (1948—Erie Archipelago); Soper (1949—southern Ontario); Gillett (1958—Ottawa district, Ont.); Landon (1960—Norfolk Co., Ont.); Löve and Bernard (1959—Otterburne district, Man.); Scoggan (1959—Churchill district, Man.); Breitung (1957—whole of Saskatchewan); Eastham (1947—supplement to Henry's 1915 British Columbia manual, with descriptions of the added species); and Porsild (1951, 1955 and 1959—southeastern Yukon, Western Canadian Arctic Archipelago and the National Parks of Alberta, respectively).

Other lists, mostly of smaller areas and too numerous to mention here, may be found in the botanical periodicals, particularly the *Canadian Journal of Botany*, *Contributions of the Gray Herbarium of Harvard University*, *Le Naturaliste canadien*, the *Canadian Field-Naturalist*, *Rhodora*, the *Transactions of the Royal Canadian Institute*, and publications of the Canada Department of Agriculture. Special mention should be made of the numerous and lengthy checklists of the flora of the Ungava and the James Bay regions made by the individuals or team of A. Dutilly, E. Lepage and M. Duman and published in *Le Naturaliste canadien* or as contributions of the Arctic Institute of the Catholic University of America.

Cody (1956) published a manual of the ferns of the Ottawa district and Dore (1959) one of the grasses of the same area. An indispensable tool for the student of grasses is *Manual of the Grasses of the United States* by A. S. Hitchcock and Agnes Chase, the latest edition of which was published in 1951. The Forestry Branch of the federal Department of Northern Affairs and National Resources published a revised edition of *Native Trees of Canada* (1956—with maps). Roland and Benson (1955) contributed a *Summer Key to the Woody Plants of Nova Scotia*. Cunningham (1958) published a collection of photographs of Canadian forest plants, with notes on their distribution. Weeds of Canada were dealt with by Frankton (1955) and Montgomery (1964). Eva Beckett (1959) published a list of the introduced plants of Churchill, Man.

The writer, following many summers 'in the field' throughout Canada, is making use of the above sources of information in the preparation of a manual *Flora of Canada* in which an attempt is being made to summarize present floristic knowledge of the ferns and flowering plants of the country. It is estimated that about 4,800 species will be involved, comprising about 965 genera distributed among 150 families. Particular attention is being given to the construction of workable identification keys, and notes will be given on the synonymy, ecology, ranges in the various provinces, and geographical distribution of each species. Stimulus was given to this project by the holding of the Ninth International Botanical Congress in Montreal in 1959, when botanists from all over the world came together to discuss problems, present papers, amend the rules of botanical nomenclature, and go on botanical tours throughout the country. Canadian botanists profited greatly from this mass contact with their professional colleagues.

PART III.—CLIMATE AND TIME ZONES

Section 1.—Climate*

Just as there are great differences in the weather throughout Canada at any given instant, there are also many climates. These climates are not unique but are similar to those in Europe and Asia extending from the Arctic down to the mid-northern hemispheric latitudes. Because Canada is situated in the northern half of the hemisphere, most of the country loses more heat annually than it receives from the sun. The general atmospheric circulation compensates for this and at the same time produces a general movement of air from west to east. Migrant low pressure areas move across the country in this "westerly zone", producing storms and bad weather. In intervals between storms there prevails the fair weather associated with high pressure areas.

Although the movement of migrant high and low pressure systems within the zone of the westerlies is the most significant climatic control over Canada, the physical geography of North America contributes greatly to the climate. On the West Coast, the western Cordillera limits mild air from the Pacific to a narrow band along the coast, while the prairies to the east of the mountains are dry and have extreme temperatures because they are shielded from the Pacific Ocean and are in the interior of a large land mass. In addition, the prairies are part of a wide north-south corridor open to rapid air flow from either north or south which often brings sudden and drastic weather changes to this interior area. On the other hand, the large water surfaces of Eastern Canada produce a considerable modification to the climate. In southwestern Ontario winters are milder with more snow, and in summer the cooling effect of the lakes is well illustrated by the number of resorts along their shores. On the East Coast, the Atlantic Ocean has considerable effect on the immediate coastal area where temperatures are modified and conditions made more humid when the winds blow inland from the ocean.

The following table gives temperature and precipitation data for typical stations in the various regions of Canada. Temperatures in this table refer to observations taken in a thermometer shelter which has been placed in a representative location with the thermometer bulbs four feet above the surface of the ground. Mean January and July temperature data are based on records over the 30-year period from 1921 to 1950 except for far northern stations where the available period of record is shorter. After an average temperature is obtained for each day in January over a 30-year period, the mean January temperature may be arrived at by striking a mean of these 930 daily values. The mean July temperatures may be obtained in a similar manner. The highest and lowest temperatures on record refer to the absolute extremes for the entire period of record at each station. Average dates are shown for the last occurrence in spring of a temperature of 32°F. or lower and for the first occurrence in autumn of freezing temperatures at the four-foot level in the thermometer shelter.

The official Canadian rain gauge is a small cylinder in which the rain is caught and then measured to one hundredth of an inch with a simple measuring device. Freshly fallen snow is measured as it lies on the ground and recorded to the tenth of an inch. Total precipitation values as shown in the table are the sum of the total rainfall and one tenth of the total snowfall. For the purposes of this table, a day with precipitation is one on which at least one hundredth of an inch of rain or one tenth of an inch of snow has fallen.

* Prepared by the Meteorological Branch of the Department of Transport, Toronto. A comprehensive study on The Climate of Canada, also prepared by the Meteorological Branch, was carried in the 1959 Year Book, pp. 23-51. Supplementing that textual material, detailed tabulations of climatic factors for 45 individual meteorological stations across the country were carried in the 1960 Year Book, pp. 33-77. A reprint is available from the above source giving the complete textual and tabular data.

¹ Total rainfall and one tenth of the total snowfall.² No appreciable period free from frost.

Section 2.—Meteorological Observing Stations*

In January 1965, official meteorological observations were taken and recorded at some 2,209 weather reporting stations in Canada. There are several different classes of stations, ranging from the first-order reporting stations at airports where hourly observations of all aspects of the weather are recorded, to the co-operative precipitation observing stations where a volunteer observer makes daily observations of rainfall and snowfall. While there are vast areas of the country where the weather stations are several hundred miles apart, most of the settled parts of the country are represented by first-order hourly reporting stations every 100 miles or so, and by co-operative climatological observing stations at least every 25 miles.

At most of the 238 first-order synoptic stations complete weather observations are made every six hours and at a large percentage of them only slightly less complete observations for aviation forecasts are made every hour. These weather data, including information on temperature, precipitation, pressure, wind, humidity, cloud and visibility, are sent first by radio and teletype to the different weather offices across the Continent to be used for weather forecasting purposes, and then at each month-end the manuscript reports are sent by mail to Meteorological Branch Headquarters for use in compiling climatic statistics. At some 90 of these observing stations, personnel of the Telecommunications Branch of the Department of Transport take weather observations as part of their scheduled duties, and 35 stations are operated in a similar manner by the different Armed Services; 70 stations are operated by Meteorological Branch personnel and the remainder are operated under contract, mainly by various transportation and communications companies.

Twice daily at 35 locations throughout the country, complete upper air observations are made from the surface to altitudes upwards to 100,000 feet. Pressure, temperature and humidity measurements are determined by radiosonde instruments carried aloft by balloons and the information reported by radio to the ground receiving station; winds are determined by observing the drift of the balloon by means of radar or radio direction finding ground equipment. There are also 26 other locations where the winds in the lower layers of the atmosphere are determined by observing free balloon drift by means of a theodolite or by radar. As in the case of the first-order synoptic reporting stations, these upper air weather observations are made available immediately to forecast offices for weather forecasting purposes, and the manuscript reports are collected at Meteorological Branch Headquarters for compilation of climatic statistics.

About 1,256 weather observing stations in Canada are classified as climatological stations where the observers record temperature extremes and precipitation once or twice daily and send in monthly data sheets. Most of these observers serve on a voluntary basis and willingly spend several hours a month on their hobby. In addition, many governmental and industrial organizations such as agricultural experimental farms and power companies have incorporated brief climatological duties into the general work of some of their employees. These climatological stations have contributed much useful information on temperature and precipitation for publication by the Meteorological Branch.

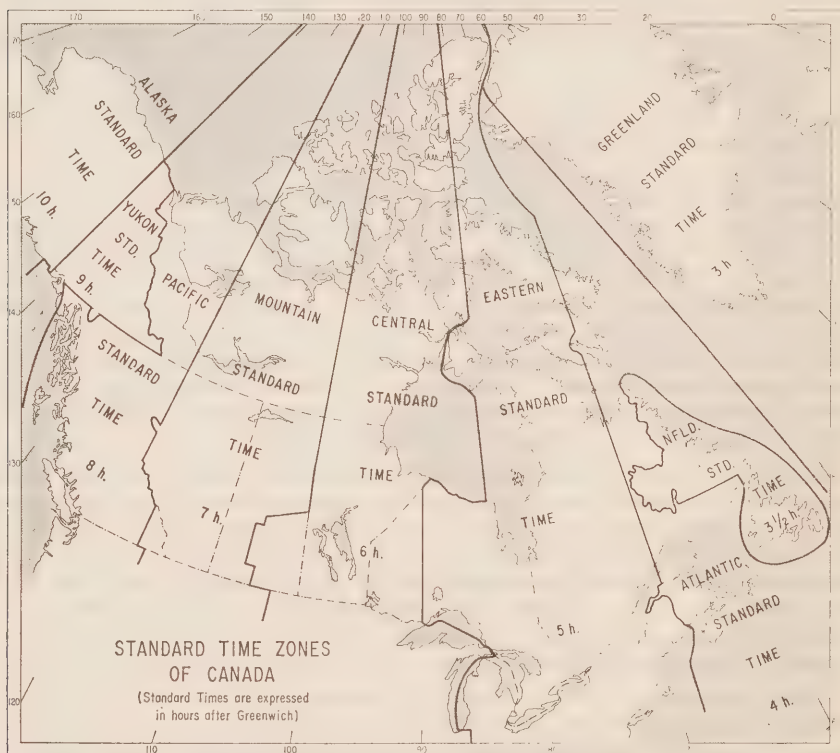

There are about 595 stations classified as precipitation stations where rainfall and snowfall only are observed and recorded. Since precipitation varies more rapidly than temperature over short distances, a dense network of these stations is required, especially in large urban areas. Finally, there are about 89 miscellaneous stations where observations of wind, sunshine and temperature are taken for special purposes. In all, the number of weather stations in Canada has been growing at an average rate of more than 50 a year for the past decade and thus a steadily increasing climatic intelligence is assisting Canadians in all economic pursuits.

* Prepared by the Meteorological Branch, Department of Transport, Toronto.

Section 3.—Standard Time and Time Zones

Standard Time, which was adopted at a World Conference held at Washington, D.C., in 1884, sets the number of time zones in the world at 24, each zone ideally extending over one twenty-fourth of the surface of the earth and including all the territory between two meridians 15° of longitude apart. In practice, the zone boundaries are quite irregular for geographic and political reasons. Universal Time (UT) is the time of the zone centred on the zero meridian through Greenwich. Each of the other time zones is a definite number of hours ahead of or behind UT to a total of 12 hours, at which limit the international date line runs roughly north-south through the mid-Pacific.

Canada has seven time zones, the most easterly being Newfoundland Standard Time, three hours and thirty minutes behind UT. In the west, Yukon Standard Time, which is used throughout Yukon Territory, is nine hours behind UT. In between, from east to west, the remaining zones are called Atlantic, Eastern, Central, Mountain and Pacific Standard Time.

Legal Authority for the Time Zones.—Time in Canada has been considered a matter of provincial rather than federal jurisdiction. Each of the provinces and the Northwest Territories has enacted laws governing the standard time to be used within its boundaries. These laws determine the location of the time zone boundaries. Lines of communication, however, have caused communities near the boundary of a time zone to adopt

the time of the adjacent zone, and in most cases these changes are acknowledged by amendments to provincial legislation. During the two World Wars, there were federal enactments concerning time but these were of temporary duration. In 1941 the Dominion Observatory time was declared the time to be used for official purposes in Canada.

Daylight Saving Time.—Although Daylight Saving Time had been urged in many quarters before World War I, its first use in Canada came as a federal war measure in 1918. Today most of the provinces have legislation controlling the provincial or municipal adoption (or rejection) of Daylight Saving. In the remaining provinces it is necessary to refer to the individual municipalities to determine whether, and between what dates, Daylight Saving is adopted in any particular year.

PART I.—CONSTITUTION OF CANADA

The Canadian federal state, which today comprises ten provinces and two vast northern territories, had its beginning ninety-eight years ago in the enactment (Mar. 29, 1867) by the British Parliament of the British North America Act, 1867. Fashioned largely out of the Seventy-two Resolutions drafted at Quebec (1864) by the Fathers of Confederation, the British North America Act, 1867 provided for the federal union of the three British North American provinces (Canada, New Brunswick and Nova Scotia) in one Dominion under the name of "Canada".

Although the new nation that came into being on July 1, 1867 was a federation comprised of four provinces, namely, Ontario, Quebec, New Brunswick and Nova Scotia, Sect.

* Except where otherwise indicated, the information in this Chapter has been brought up to the date of Apr. 30, 1965. Certain changes occurring between that date and the date of going to press will be found in an Appendix to this volume. Also, official appointments made up to the date of going to press will be found in Chapter XXVII (see Index).

146 of the Act provided for the admission into the Union of the Crown colonies of Prince Edward Island and Newfoundland on the Atlantic and the united (1866) island and mainland colony of British Columbia on the Pacific, and also of the vast expanse of Hudson's Bay Company territory in the North West known as "Rupert's Land and the North-Western Territory". Following the negotiation of an agreement on terms comprising the Company's surrender of its authority and territories to the Crown (which was to transfer them at once to Canada) and the retention of one twentieth of the land of the fertile belt (the southern territories) with designated blocks of land around its trading posts and a Canadian cash payment of £300,000, the new nation of Canada was ready to expand westward with considerable momentum across the Continent to the Pacific.

The acquisition by Canada of Rupert's Land and the North-Western Territory enabled the Red River settlement, after a few months of disturbance, to receive limited provincial establishment under the name of "Manitoba" in 1870; provided the Federal Government with the public lands needed to help subsidize a transcontinental railway linking the Pacific with the Canadian East, thereby fulfilling the pledge to British Columbia to begin the Canadian Pacific Railway within two years and to complete it within ten years of the date of union, July 20, 1871; and laid, through the provision of millions of acres of public lands, the land and economic bases for the Federal Government's adoption of a free-homestead policy for the Canadian prairies that, in conjunction with the completion of the Canadian Pacific Railway and the launching of other railway lines, brought wave after wave of settlers into the Northwest Territories in such numbers as to justify the creation of the two Provinces of Saskatchewan and Alberta in 1905 out of the portion of the Northwest Territories south of the 60th parallel of north latitude. Although provision for their entry was included in the British North America Act, 1867, the Province of Prince Edward Island held back from the Union until 1873 and Newfoundland became Canada's tenth province on Mar. 31, 1949.

The Constitution of Canada, which had a corporate beginning in 1867, combines, in a set of rules determining the creation and operation of the machinery or institutions of government, the Cabinet system of responsible government (based on an inheritance from Britain) with a Canadian adaptation of federalism (as then practised in the United States for eighty years). A written document, the British North America Act of 1867, contains a substantial portion of Canada's Constitution and this Act, with its various amendments,* is popularly held to be the Canadian Constitution. There is, however, another and perhaps more important part which appears, through the evolutionary processes of historical growth, in various guises including well-established usages and conventions found in the unwritten provisions of the Constitution.

Thus, the British North America Act is not a comprehensive constitutional document presenting an exhaustive statement of fundamental laws and rules by which Canada is governed. The Constitution of Canada in its broadest sense includes other British statutes (such as the Statute of Westminster, 1931) and Orders in Council (notably those admitting various provinces and territories to the federation), statutes of the Parliament of Canada relating to such matters as the succession to the Throne, the Royal Style and Titles, the Governor General, the Senate, the House of Commons, the creation of courts, the

* See *A Consolidation of The British North America Acts 1867 to 1970*, consolidated by Elmer A. Driedger as of Jan. 1, 1964. Queen's Printer, Ottawa. 75 cents (Catalogue No. YX1-164). A further amendment was made in 1964 respecting old age pensions (see p. 79).

establishment of government departments, the franchise, elections, and also statutes of provincial legislatures relating to provincial constitutional institutions and government matters. Federal and provincial Orders in Council, legally authorized by their respective statutes, provide further constitutional material as do the decisions of the courts which interpret the British North America Act and all ordinary statutes and indeed possess the power to set aside any laws which they hold to be *ultra vires* or beyond the jurisdiction of the enacting legislative bodies, whether federal or provincial. Moreover, the Canadian Constitution comprises, in addition to the statutory law and its judicial interpretation, substantial sections of the common law, unwritten constitutional usages and conventions and principles of democratic government which were transplanted from Britain over two hundred years ago and since then have been thriving and evolving in the Canadian environment. For example, the Cabinet system of responsible government (see pp. 74-75) and its functioning through close identification of the executive and the legislative powers (that is, of the Cabinet and the House of Commons) is not mentioned in the British North America Act but derives from an unwritten convention of the Constitution.

Although the essential principles of Cabinet government are based in custom or constitutional usage, the federal structure of Canadian government rests on the explicit written provisions of the British North America Act. Apart from the creation of the federal union, the dominant feature of the Act and indeed of the Canadian federation was the distribution of powers between the central or federal government on the one hand and the component provincial governments on the other. In brief, the primary purpose was to grant to the Parliament of Canada legislative jurisdiction over all subjects of general or common interest, while giving to the provincial legislatures jurisdiction over all matters of local or particular interest (see pp. 93-94 and pp. 107-108).

Unlike the written constitutions of many nations, the British North America Act lacks comprehensive "bill of rights" clauses, although it does accord specific constitutional protection to the use of the English and French languages (clause 133) and special safeguards with respect to sectarian or denominational schools. Such vital rights as freedom of speech, freedom of assembly, freedom of religion, freedom of the press, trial by jury and similar liberties enjoyed by the individual citizen are not recorded in the British North America Act but rather depend on the statute law and the common law inheritance. Security of these rights was confirmed by the passage of a Canadian Bill of Rights—An Act for the Recognition and Protection of Human Rights and Fundamental Freedoms (SC 1960, c. 44), assented to Aug. 10, 1960. (See also Chapter IX, Sect. 1 on Canadian Criminal Law and Procedure.)

Treaty-Making Powers.*—The Federal Government has exclusive responsibility for the conduct of external affairs as a matter of national policy affecting all Canadians. The policy of the Federal Government in discharging this responsibility is to seek to promote the interest of the entire country and of all Canadians of the various provinces within the over-all framework of the national policy.

In respect of matters of specific concern to the provinces of Canada, it is the policy of the Canadian Government, in a spirit of co-operative federalism, to do its utmost to assist the provinces in achieving the particular aspirations and goals which they wish to attain. The attitude of the Federal Government in this respect was illustrated by the "entente" signed by representatives of Quebec and France in the field of education in February 1965. The Quebec and federal authorities co-operated actively in a procedure

* Extracted from "The Provinces and Treaty-Making Powers", Appendix to *Votes and Proceedings of the House of Commons of Canada*, No. 8. Apr. 26, 1965.

which enabled the Province of Quebec, within the framework of the Constitution and the national policy, to participate in international arrangements in a field of particular interest to that province.

Thus, under existing procedures, the position is that, once it is determined that what a province wishes to achieve through agreements in the field of education or in other fields of provincial jurisdiction falls within the framework of Canadian foreign policy, the provinces can discuss detailed arrangements directly with the competent authorities of the country concerned. When a formal international agreement is to be concluded, however, the federal powers relating to the signature of treaties and the conduct of over-all foreign policy must necessarily come into operation.

The approach of the Canadian Government to the question of Canadian representation in international organizations of a social, cultural or humanitarian character reflects the same constructive spirit. It recognizes the desirability of ensuring that the Canadian representation in such organizations and conferences reflects in a fair and balanced way provincial and other interests in these subjects.

Amendment of the Constitution.—No provision was made in the British North America Act of 1867 for amendment thereof by any legislative authority in Canada but both the Parliament of Canada and the provincial legislatures were given legislative jurisdiction with respect to some matters relating to government. Thus, for example, the Parliament of Canada was given jurisdiction with respect to the establishment of electoral districts and election laws and the privileges and immunities of Members of the House of Commons and the Senate, and each provincial legislature was empowered to amend the constitution of the province except as regards the office of Lieutenant-Governor. By an amendment to the British North America Act passed in 1949, the authority of the Parliament of Canada to legislate with respect to constitutional matters was considerably enlarged and it may now amend the Constitution of Canada except as regards the legislative authority of the provinces, the rights and privileges of provincial legislatures or governments, schools, the use of the English or the French language, and the duration of the House of Commons other than in time of real or apprehended war, invasion or insurrection.

The question of devising amendment procedure within Canada which satisfies the need to safeguard or entrench such basic provincial and minority rights as are noted immediately above and yet possesses sufficient flexibility to ensure that the Constitution can be altered to meet changing circumstances is one that still engages the attention of the federal and provincial governments and legislatures. An outline of the constitutional background to the problem, an annotated list of the fourteen occasions since 1867 when amendments to the British North America Act were made by the United Kingdom Parliament, a concise review of the prolonged search for a satisfactory amending procedure in Canada—the subject of repeated consideration in the Parliament of Canada and in a series of formal federal-provincial conferences and meetings in the years 1927, 1935-36, 1950, 1960-61, and 1964—and, more specifically, the text of a draft Bill “to provide for the amendment in Canada of the Constitution of Canada” (accompanied by explanatory notes relating thereto) which embodies the amending procedure or formula unanimously recommended by the Conference of Attorneys-General and unanimously accepted by the Conference of the Prime Minister and the Premiers (October 1964) are all made available in an official publication entitled *The Amendment of the Constitution of Canada*, authorized by the Minister of Justice, February 1965.* In the summer of 1965, the Government of Canada was awaiting the acceptance of this “Fulton-Favreau amendment formula” by the ten provincial legislatures before bringing it before the Federal Parliament for enactment.

¹ The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (SC 1912, c. 40).

² Extended by Quebec Boundaries Extension Act, 1912 (SC 1912, c. 45) and diminished Mar. 1, 1927 in consequence of the Award of the Judicial Committee of the British Privy Council whereby approximately 112,000 sq. miles of territory (formerly considered as part of Quebec) was assigned to Newfoundland.

³ Extended by the Extension of Boundaries Act of Manitoba, 1881 and the Manitoba Boundaries Extension Act, 1912 (SC 1912, c. 32).

⁴ Saskatchewan and Alberta created as provinces in 1905 from the area formerly comprised in the provisional districts of Assiniboia, Athabaska, Alberta and Saskatchewan established May 17, 1882 by minute of Canadian Privy Council concurred in by Dominion Parliament and Order in Council, Oct. 2, 1895.

⁵ By an Imperial Order in Council passed on June 23, 1870 pursuant to the Rupert's Land Act, 1868 (Br. Stat. 1868, c. 105), the former territories of the Hudson's Bay Company known as Rupert's Land and the North-Western Territory were transferred to Canada effective July 15, 1870. These territories were designated as the North-West Territories by the Act of SC 1869, c. 3 and as the Northwest Territories by RSC 1906, c. 62. By Imperial Order in Council of July 31, 1880 (effective Sept. 1, 1880), all British territories and possessions in North America not already included within Canada and all islands adjacent thereto (with the exception of the Colony of Newfoundland and its dependencies) were annexed to Canada and these additional territories were formally included in the North-West Territories by SC 1905, c. 27. The Province of Manitoba was formed out of a portion of the territories by the Manitoba Act, 1870 (SC 1870, c. 3) and a further portion was added to Manitoba in 1881 by SC 1881, c. 14. The Provinces of Alberta and Saskatchewan were formed out of portions of the territories in 1905 and in 1912 other portions were added to Manitoba, Ontario and Quebec.

⁶ By SC 1876, c. 21, a separate district to be known as the District of Keewatin was established and provision was made for the local government thereof. The Act was expressed to come into force by proclamation. It provided that portions of the District might be re-annexed to the North-West Territories by proclamation; in 1886 a portion of the District of Keewatin was re-annexed and in 1905 the entire Keewatin District was re-annexed. The Act of 1876 was never proclaimed. By Order in Council of May 8, 1882 the provisional districts of Assiniboia, Saskatchewan, Alberta and Athabaska were created for the convenience of settlers and for postal purposes. By Order in Council of Oct. 2, 1895 the further provisional districts of Ungava, Franklin, Mackenzie and Yukon were created. The boundaries of these provisional districts were re-defined by Order in Council of Dec. 18, 1897. Subsequently the Yukon Territory was formed, the Provinces of Alberta and Saskatchewan were created and other portions of the territories were annexed to Quebec, Ontario and Manitoba. By Order in Council dated Mar. 16, 1918 (effective Jan. 1, 1920) the remaining portions of the Northwest Territories were divided into three provisional districts known as Mackenzie, Keewatin and Franklin.

⁷ See pp. 106-107.

⁸ The provisional district of Yukon established in 1895 was created a judicial district of the North-West Territories by proclamation issued pursuant to Sect. 51 of the North-West Territories Act (RSC 1886, c. 50) on Aug. 16, 1897 and by the Yukon Territory Act (SC 1898, c. 6) was declared to be a separate Territory.

The Canadian Pavilion

expo67

Montreal

Participation

The Federal Government Pavilion is Canada's official participation in Expo 67. Canada is the host nation to this world exhibition, and the Pavilion has been designed to make Canada and Canadians better known to visitors from around the world. It also serves as a mirror in which Canadians may see themselves with enhanced insight into what it means to be a Canadian. Canada's prosperity and progress depend upon natural and creative resources; the architectural and thematic concepts of the Pavilion bring these to life. The cluster of pyramids suggests the crystalline nature of natural resources; the great inverted pyramid illustrates the balance of the conservative and the daring which transforms tradition into new and vital creative forms. The overall theme of the world exhibition is *Man in his World*. In keeping with this theme, the Pavilion reflects Canadians and the part they play in developing their

country and its relations with other countries of the world. Although basically it gives a serious look at Canada, at what the country is and what its people do, the Pavilion and its exhibits offer an enjoyable and entertaining experience.

H. Leslie Brown

H. Leslie Brown
Commissioner General

The Challenges

The Challenges, the largest exhibit area of the Pavilion, is divided into three sections with one unifying theme—the challenges that Canadians face in making and keeping their country vital and progressive. The Challenge of Resources deals with nature's great bounty at the disposal of Canadians and how they have applied energy to develop and use these resources. The Challenge of Distance and the response of transportation and communications shows how Canadians have overcome great barriers of distance and topography in order to transport efficiently the products of energy applied to resources, and to communicate quickly and easily with each other and with the world. The Challenge of Living poses the challenge of technological change. Through the adventure of continuous learning, the Canadian has the opportunity of preparing for occupational change, of playing a fuller role in his community and government, and of developing his personal skills and awareness by the satisfying use of leisure.

Interdependence

Canadians are conscious of the growing interdependence within the world community of nations and of their country's involvement in it. On the plinth beneath the great inverted pyramid, Canada's participation in various aspects of this interdependence is outlined. The exhibits depict the role that Canadians play in the advancement of universal understanding and goodwill. The inverted pyramid is called the Katimavik, an Eskimo word meaning "a gathering place". The interior is an expression of concepts universal to all men, an expression through sculptured objects representing the measure of man in Time, Navigation, Nature and Man himself. The Katimavik offers an unusual environment, a place appropriate to reflect upon Man and His World.

Growth

The Growth exhibit pictures the development of Canada as a country, using a variety of media to portray the dominant events in its making. The major experience is a film ride in which the audience is carried through a series of five theatres, progressing through the pages of history from the days of early settlement to the present. The audience leaves through a large hexagon of mirrors in which they become part of a colourful fantasy of Confederation Day, 1867.

The Tree of the People

Unique and resplendent stands the Tree of the People, an abstract maple tree portraying the Canadian people in their great diversity of origin and occupation. The large "leaves" of the tree are photographs of Canadians in natural size, working and at leisure. The photographs are linked to suggest the magnificent colours of the maple in autumn. Slepped ramps encourage the visitor to climb among these leaves and surround himself with a kaleidoscope of Canadian activity. At the tree roots are exhibits outlining various sociological factors in Canadian life, typical of which are biculturalism and ethnic diversity. These, seen together with the leaves, give a vivid portrait of Canadians today.

The Land of Canada

The introduction to the Pavilion is an exhibition devoted to the Land of Canada, in which films and music, with a sculptured metal screen, combine to suggest the vastness and beauty of the Land.

The Arts Centre

The Arts Centre includes a modern 500-seat theatre, an art gallery and a library, all devoted to the creative and performing arts in Canada. The visitor may view Canadian visual arts in the gallery, theatrical performances and films in the theatre and, in the library, a wide selection of Canadian books in English and French, as well as fewer numbers in the languages of Canadians of other ethnic cultures. The Centre contains two restaurants with different price ranges, both featuring Canadian food, finely prepared and well served. Also housed in the building are the administrative offices for the Canadian Pavilion, a first-aid station and the security services.

The Bandshell

Visitors to the Pavilion will gravitate to the bandshell, an outdoor stage with seating for 1,500 people. Band concerts, folk dancing and similar events performed by amateur and professional groups from across Canada are the feature of this area, and audience participation will be encouraged whenever possible.

The Children's Centre

The Children's Creative Centre comprises a model nursery school for the very young, and music, drama and art studios for children from 6 to 11 years. The playground will be enjoyed because it uses playthings from everyday life. Through one-way glass, skilled teachers can be viewed demonstrating the best in Canadian methods of stimulating imagination and developing creative power.

PART II.—MACHINERY OF GOVERNMENT

Section 1.—The Federal Government

Subsection 1.—The Executive

The Crown.—The British North America Act of 1867 (Sect. 9) provides that “the Executive Government and authority of and over Canada is . . . vested in the Queen”. The functions of the Crown, which are substantially the same as those of The Queen in relation to the British Government, are discharged in Canada by the Governor General in accordance with established principles of responsible government.

The Queen.—The personal participation of The Queen in the functions of the Crown in Canada has been limited to such occasions as the granting of honours and awards, approval of changes in the Table of Precedence, institution of new military awards, or the periodic appointment of a Governor General. On the occasion of a royal visit, The Queen may participate in those ceremonies that otherwise are carried out in her name, such as the opening and dissolution of Parliament, the assent to Bills and the granting of a general amnesty.

Apart from her constitutional position in relation to the various governments of the Commonwealth countries, The Queen is Head of the Commonwealth and symbolizes the association of the member countries. Until 1953 the title of The Queen was the same throughout the Commonwealth. Constitutional developments put the title somewhat out of accord with the facts of the position, and in December 1952 it was decided by the Prime Ministers of the Commonwealth countries meeting at London, England, that new forms of title for each country should be devised. The title for Canada was approved by Parliament and established by a Royal Proclamation on May 29, 1953. The title of The Queen, so far as Canada is concerned, now is:—

“Elizabeth the Second, by the Grace of God, of the United Kingdom, Canada and Her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith”.

1.—Sovereigns of Canada since Confederation, 1867

Name	Dynasty	Year of Birth	Date of Accession
Victoria.....	House of Hanover.....	1819	June 20, 1837
Edward VII.....	House of Saxe-Coburg and Gotha.....	1841	Jan. 22, 1901
George V.....	House of Windsor.....	1865	May 6, 1910
Edward VIII.....	House of Windsor.....	1894	Jan. 20, 1936
George VI.....	House of Windsor.....	1895	Dec. 11, 1936
Elizabeth II.....	House of Windsor.....	1926	Feb. 6, 1952

The Governor General.—The Governor General, appointed by The Queen as her personal representative in Canada on the advice of the Prime Minister of Canada, traditionally serves for a term of five years. He exercises the executive authority of The Queen in relation to the Government of Canada under Letters Patent issued under the Great Seal of Canada (revised and re-issued, effective Oct. 1, 1947) and the provisions of the British North America Acts, 1867 to 1960. Acting under the recommendations of his responsible Ministers, in The Queen's name, he summons, prorogues and dissolves Parliament, assents to Bills, and exercises other executive functions.

The Governor General's annual salary and allowances provided by the Parliament of Canada are \$48,666 and \$80,000, respectively. Office expenses and certain other items of expenditure are provided for in the estimates for the Office of the Secretary to the Governor General.

The present Governor General is styled His Excellency General The Right Honourable Georges P. Vanier, D.S.O., M.C., C.D.

2.—Governors General of Canada since Confederation, 1867

MAJOR GENERAL THE EARL OF ATHLONE.....	Apr. 3, 1940	June 21, 1940
FIELD MARSHAL THE VISCOUNT ALEXANDER OF TUNIS.....	Mar. 21, 1946	Apr. 12, 1946
THE RIGHT HONOURABLE VINCENT MASSEY.....	Jan. 24, 1952	Feb. 28, 1952
GENERAL THE RIGHT HONOURABLE GEORGES P. VANIER.....	Aug. 1, 1959	Sept. 15, 1959

The Cabinet.—The Cabinet is a committee of Ministers chosen by the Prime Minister (the leader of the political party forming the Government of the Day) generally from Members of Parliament. By convention, all members of the Cabinet either have seats in Parliament or secure seats within a short time and, again by convention, all Ministers in charge of departments of government are generally Members of the House of Commons although there is nothing in the Constitution to prevent a Minister with Portfolio being a Senator.* However, they generally prefer to have seats in the House of Commons where all crucial legislation, by convention, is introduced and where they can offer explanations necessary to secure passage of their Estimates or legislation with which they are deeply concerned. Ministers without Portfolio (without a department to administer) can be members of either the House of Commons or the Senate. Frequently the Cabinet contains one Minister without Portfolio—usually the Leader of the Government in the Senate—and perhaps one or two others chosen for a variety of reasons such as the desirability of including certain provincial or sectional representation that might otherwise be lacking in the Ministry.

Cabinet members are selected by the Prime Minister in such manner as to ensure, as far as possible, representation of the several geographical and political regions of the country and its principal ethnic, religious and social interests. Each Cabinet Minister generally assumes charge of one of the departments of government, although a Minister may hold more than one portfolio at the same time or he may hold one or more portfolios and one or more acting portfolios, or a Minister without Portfolio may hold one or more acting portfolios. In his acting capacity, the Minister exercises the same authority as if he were the Minister of the department.

* Senator the Hon. Gideon Decker Robertson held the portfolio of Minister of Labour for the periods Nov. 7, 1918 to Dec. 29, 1921 and Aug. 7, 1930 to Feb. 2, 1932; Senator the Hon. Malcolm Wallace McCutcheon served as Minister of Trade and Commerce from Feb. 12 to Apr. 22, 1963.

The position of Prime Minister, the keystone of the Cabinet, is one of exceptional authority. He alone makes recommendations on the dissolution and convocation of Parliament, appointment of Privy Councillors, Cabinet Ministers, Lieutenant-Governors, Chief Justices, Senators, Speakers of the Senate and House of Commons, and Deputy Heads of departments. The Cabinet, under his leadership, directs the business of the Commons, initiates nearly all public Bills placed before Parliament, and has complete responsibility for the initiation of taxes and the recommendation of expenditures. Following established precedent or convention, it is always responsible to the Commons. When the Cabinet (the Government) suffers defeat on a Government Bill or a vote of censure or on a motion of want of confidence in the Commons, the existing Government or Cabinet must either resign or request a dissolution from the Governor General. If it resigns, the Governor General may call on the Leader of the Opposition in the Commons to form a new Government. Alternatively, if a Government that has been defeated in the House is granted a dissolution and is defeated in the ensuing general election, then, should no clear majority be indicated, the Government may decide (1) to remain in office and seek a vote of confidence in the House when it meets or (2) to resign immediately with the consequent result that the Governor General will ask the leader of the party with the highest number of members returned to form a new Government. These alternatives may also eventuate as a result of a general election subsequent to the normal dissolution of Parliament at or near the close of its statutory life.

The primary responsibility of the Governor General in either of the above circumstances is to provide the nation with a Cabinet or Ministry capable of conducting Her Majesty's Government with the support of the House of Commons.

The Prime Ministers since Confederation are listed in Table 3 and the members of the Ministry as at Apr. 30, 1965 in Table 4. Sessional and other allowances received by Cabinet Ministers are given at pp. 88-89.

3.—Prime Ministers since Confederation, 1867

Ministry	Prime Minister	Length of Administration
1	Rt. Hon. Sir JOHN ALEXANDER MACDONALD.....	July 1, 1867 — Nov. 5, 1873
2	Hon. ALEXANDER MACKENZIE.....	Nov. 7, 1873 — Oct. 16, 1878
3	Rt. Hon. Sir JOHN ALEXANDER MACDONALD.....	Oct. 17, 1878 — June 6, 1891
4	Hon. Sir JOHN JOSEPH CALDWELL ABBOTT.....	June 16, 1891 — Nov. 24, 1892
5	Rt. Hon. Sir JOHN SPARROW DAVID THOMPSON.....	Dec. 5, 1892 — Dec. 12, 1894
6	Hon. Sir MACKENZIE BOWELL.....	Dec. 21, 1894 — Apr. 27, 1896
7	Rt. Hon. Sir CHARLES TUPPER.....	May 1, 1896 — July 8, 1896
8	Rt. Hon. Sir WILFRID LAURIER.....	July 11, 1896 — Oct. 6, 1911
9	Rt. Hon. Sir ROBERT LAIRD BORDEN.....	Oct. 10, 1911 — Oct. 12, 1917 (Conservative Administration)
10	Rt. Hon. Sir ROBERT LAIRD BORDEN.....	Oct. 12, 1917 — July 10, 1920 (Unionist Administration)
11	Rt. Hon. ARTHUR MEIGHEN.....	July 10, 1920 — Dec. 29, 1921 (Unionist—"National Liberal and Conservative Party")
12	Rt. Hon. WILLIAM LYON MACKENZIE KING.....	Dec. 29, 1921 — June 28, 1926
13	Rt. Hon. ARTHUR MEIGHEN.....	June 29, 1926 — Sept. 25, 1926
14	Rt. Hon. WILLIAM LYON MACKENZIE KING.....	Sept. 25, 1926 — Aug. 6, 1930
15	Rt. Hon. RICHARD BEDFORD BENNETT.....	Aug. 7, 1930 — Oct. 23, 1935
16	Rt. Hon. WILLIAM LYON MACKENZIE KING.....	Oct. 23, 1935 — Nov. 15, 1948
17	Rt. Hon. LOUIS STEPHEN ST. LAURENT.....	Nov. 15, 1948 — June 21, 1957
18	Rt. Hon. JOHN GEORGE Diefenbaker.....	June 21, 1957 — Apr. 22, 1963
19	Rt. Hon. LESTER BOWLES PEARSON.....	Apr. 22, 1963 — ...

4.—Members of the Nineteenth Ministry, as at Apr. 30, 1965¹

(According to precedence of Ministers)

NOTE.—A complete list of the members of Federal Ministries from Confederation to 1913 appears in the 1912 Year Book, pp. 422-429. Later Ministries will be found in subsequent editions.

Office	Occupant	Date of First Appointment	Date of Appointment to Present Portfolio
Prime Minister.....	Rt. Hon. LESTER BOWLES PEARSON...	Apr. 22, 1963	Apr. 22, 1963
Secretary of State for External Affairs.....	Hon. PAUL JOSEPH JAMES MARTIN.....	Apr. 22, 1963	Apr. 22, 1963
Minister of Transport.....	Hon. JOHN WHITNEY PICKERSGILL.....	Apr. 22, 1963	Feb. 3, 1964

Minister of Forestry.....	Hon. MAURICE SAUVÉ.....	Feb. 3, 1964	Feb. 3, 1964
Minister of National Revenue.....	Hon. EDGAR JOHN BENSON.....	June 29, 1964	June 29, 1964
Associate Minister of National Defence.....	Hon. LEO ALPHONSE JOSEPH CADÉUX.....	Feb. 15, 1965	Feb. 15, 1965

¹ Changes occurring between Apr. 30, 1965 and the date of going to press will be carried in an Appendix to this volume.

Parliamentary Secretaries.—The Parliamentary Secretaries Act (SC 1959, c. 15), assented to June 4, 1959, provides for the appointment of 16 Parliamentary Secretaries from among the Members of the House of Commons to assist the respective Ministers in such manner as each Minister may direct. The Government thus revived the system of parliamentary assistantships in practice during the World War II and postwar years subsequent to 1943, whereby Cabinet Ministers might receive assistance in the performance of their parliamentary functions and promising Members of the House might secure a degree of apprenticeship for higher public office. Parliamentary Secretaries hold office for 12 months.

At Apr. 30, 1965, the following Parliamentary Secretaries were in office:—

<u>Secretary</u>	<u>Minister</u>
JACK DAVIS.....	Prime Minister
STANLEY HAIKASZ.....	External Affairs
JEAN-CHARLES CANTIN.....	Transport
LAWRENCE T. PENNELL.....	Finance
JEAN-LUC PÉPIN.....	Trade and Commerce
JOHN N. TURNER.....	Northern Affairs and National Resources
JOHN B. STEWART.....	Secretary of State
JAMES A. BYRNE.....	Labour
G. ROY McWILLIAM.....	Public Works
CHESLEY W. CARTER.....	Veterans Affairs
JOHN C. MUNRO.....	National Health and Welfare
DONALD S. MACDONALD.....	Justice
ALEXIS CARON.....	Postmaster General
BRUCE S. BEER.....	Agriculture
HUBERT BADANAL.....	Forestry
	Citizenship and Immigration

The Privy Council.—The British North America Act of 1867 (Sect. 11) provides for "a Council to aid and advise in the Government of Canada, to be styled the Queen's Privy Council for Canada...". At present it consists of about 115 members sworn of the Council by the Governor General on the advice of the Prime Minister. Membership in the Privy Council is for life so that Privy Councillors include both former and present Ministers of the Crown as well as a number of persons who have been, from time to time as an honour, sworn as Privy Councillors; these include members of the Royal Family, past and present Commonwealth Prime Ministers, and former Speakers of the Senate and of the House of Commons of Canada. The Council seldom meets as a body and its constitutional responsibilities as adviser to the Crown in respect to Canada are performed exclusively by a Committee; the membership thereof, with a few historical exceptions, is identical to that of the Cabinet of the Day. A clear distinction between the functions of the Committee of the Privy Council and the Cabinet is rarely made and actually the terms "Council" and "Cabinet" are commonly employed as synonyms.

5.—Members of the Queen's Privy Council for Canada According to Seniority Therein, as at Apr. 30, 1965

President of the Privy Council..... Hon. G. J. McILRAITH
Clerk of the Privy Council and Secretary to the Cabinet..... R. G. ROBERTSON

NOTE.—In this list the prefix "Rt. Hon." indicates membership in the British Privy Council.

¹ The ordinary legal limit of duration for each Parliament is five years. ² Duration of Parliament in years, months and days. The life of a Parliament is counted from the date of return of election writs to the date of dissolution, both days inclusive (BNA Act, Sect. 50). ³ Date of general election. ⁴ Writs returnable. ⁵ Dissolution of Parliament. ⁶ Includes long adjournment from Nov. 29, 1956 to Jan. 8, 1957. ⁷ Includes long adjournment from July 13 to Sept. 7, 1961. ⁸ Government defeated in House of Commons on want of confidence motion. ⁹ Includes long adjournment from Aug. 2 to Sept. 30, 1963. ¹⁰ Includes long adjournment from Dec. 18, 1964 to Feb. 16, 1965.

Subsection 2.—The Legislature

The federal legislative authority is vested in the Parliament of Canada consisting of The Queen, an Upper House styled the Senate, and the House of Commons. Bills may originate in either the Senate or the House subject to the provisions of Sect. 53 of the British North America Act, 1867, which provides that Bills for the appropriation of any part of the public revenue or the imposition of any tax or impost shall originate in the House of Commons. Bills must pass both Houses and receive Royal Assent before becoming law. In practice most public Bills originate in the House of Commons, although there has been a marked increase recently in the introduction of public Bills in the Senate, at the instance of the Government, in order that Bills may be dealt with in the Senate while the Commons is engaged in other matters such as the debate on the Speech from the Throne. Private Bills usually originate in the Senate. The Senate may delay, amend or even refuse to pass Bills sent to it from the Commons, but differences are usually settled without serious conflict. (See Chap. XXVII for current legislation.)

Under Sect. 91 of the British North America Acts, 1867 to 1964, the legislative authority of the Parliament of Canada extends to the following: the amendment of the Constitution of Canada (subject to certain exceptions—see p. 71); the public debt and property; the regulation of trade and commerce; unemployment insurance; the raising of money by any mode or system of taxation; the borrowing of money on the public credit; postal service; the Census and statistics; militia, military and naval service, and defence; the fixing of and providing for the salaries and allowances of civil and other officers of the Government of Canada; beacons, buoys, lighthouses and Sable Island; navigation and shipping; quarantine and the establishment and maintenance of marine hospitals; sea coast and inland fisheries; ferries between a province and any British or foreign country or between two provinces; currency and coinage, banking, incorporation of banks and the issue of paper money; savings banks; weights and measures; bills of exchange and promissory notes; interest; legal tender; bankruptcy and insolvency; patents of invention and discovery; copyrights; Indians and lands reserved for the Indians; naturalization and aliens; marriage and divorce; the criminal law, except the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters; the establishment, maintenance and management of penitentiaries; such classes of subjects as are expressly excepted in the enumeration of the classes of subjects by these Acts assigned exclusively to the legislatures of the provinces.

Under Sect. 95, the Parliament of Canada may make laws in relation to agriculture and immigration concurrently with provincial legislatures although federal legislation is paramount in the event of conflict. By the British North America Act, 1951 (Br. Stat. 1950-51, c. 32) it is declared that the Parliament of Canada may make laws in relation to old age pensions in Canada but no such law shall affect the operation of any provincial laws in relation to old age pensions. By the British North America Act, 1964, which received Royal Assent on July 31, 1964, this amendment was extended, at the request of the Parliament of Canada (June 19, 1964) to permit the payment of supplementary benefits, including survivors' and disability benefits irrespective of age, under a contributory pension plan.

The Senate.—From an original membership of 72 at Confederation, the Senate, through the addition of new provinces and the general growth of population, now has 102 members, the latest change in representation having been made on the admission of Newfoundland to Confederation in 1949. The growth of representation in the Senate is summarized by province in Table 7.

Senators are appointed by the Governor General by instrument under the Great Seal of Canada. The actual power of appointing Senators resides by constitutional usage in the Prime Minister whose advice the Governor General accepts in this regard. Until the passage of "An Act to make provision for the retirement of members of the Senate" (SC

1965, c. 4), assented to on June 2, 1965, Senators were appointed for life; that Act fixes at 75 years the age at which any person appointed to the Senate after the coming into force of the Bill will cease to hold his place in the Senate.

In each of the four main divisions of Canada, except Quebec, Senators represent the whole of the province for which they are appointed; in Quebec one Senator is appointed for each of the 24 electoral divisions of what was formerly Lower Canada. The deliberations of the Senate are presided over by a Speaker appointed by the Governor General in Council (in effect by the Government) and government business in the Senate is sponsored by the Government Leader in the Senate.

The Senate is not a competitor of the House of Commons in the field of legislation but, in the main, acts as a second chamber giving further scrutiny to legislation initiated in the House of Commons. Under the Constitution, Bills for appropriating any part of the public revenue or for imposing a tax or impost must originate in the Commons but in every other respect, since both Houses must concur in every piece of legislation, the Senate has an equal voice with the House of Commons.

The House of Commons.—The British North America Act, 1867 provided that in respect of representation in the House of Commons the Province of Quebec should have the fixed number of sixty-five members and that there should be assigned to each of the other provinces such a number of members as would bear the same proportion to the number of its population as the number sixty-five bears to the number of the population of Quebec. This Act also provided that on the completion of a census in 1871 and of each subsequent decennial census the representation of the several provinces should be re-adjusted provided the proportionate representation of the provinces as prescribed by the Act were not thereby disturbed.

In the session of 1946 the House of Commons adopted a resolution stating that the effect of the provisions of the British North America Act relating to representation had not been satisfactory in that proportionate representation of the provinces according to population had not been maintained and that a more equitable apportionment of members to the various provinces could be effected if readjustments were made on the basis of the

population of all the provinces taken as a whole. The Act was amended accordingly in 1946 to provide a new rule to regulate representation in the House of Commons. Generally speaking, representation was fixed as follows:—

The membership assigned to each province shall be computed by dividing the total population of the provinces by two hundred and fifty-four and by dividing the population of each province by the quotient so obtained.

This rule, employed in the redistribution of representation made in 1947, was effective in the General Election of 1949.

After the completion of the 1951 Census it was apparent that, as a result of a wartime shift of population, a substantial reduction in the representation of the Province of Saskatchewan would ensue under the rules then regulating representation. Accordingly, in an effort to eliminate sharp reductions in provincial representation from one census to another, the British North America Act was again amended (RSC 1952, c. 304, Sect. 51) (see Canada Year Book 1963-64, p. 75) to ensure that the representation of any province should not be reduced by more than 15 p.c. at any one readjustment, subject however to the qualification that the effect of the rule should not be to make the representation of a province with a smaller population greater than any province with a larger population.

Subsequently in 1952, Parliament enacted RSC 1952, c. 334, effective in the General Election of 1953 and in each successive General Election down to that of the Twenty-sixth Parliament (Apr. 8, 1963), which provided that representation in the House of Commons should be on the following basis:—

“Sect. 2.—Eighty-five members of the House of Commons shall be elected for the Province of Ontario, seventy-five for the Province of Quebec, twelve for the Province of Nova Scotia, ten for the Province of New Brunswick, fourteen for the Province of Manitoba, twenty-two for the Province of British Columbia, four for the Province of Prince Edward Island, seventeen for the Province of Saskatchewan, seventeen for the Province of Alberta, seven for the Province of Newfoundland, one for the Yukon Territory and one for Mackenzie district of the Northwest Territories, thus making a total of two hundred and sixty-five members.”

The number of representatives of each province elected at each of the 26 General Elections since Confederation is given in Table 9.

¹ Northwest Territories in 1963.

The Electoral Boundaries Readjustment Act was passed by the House of Commons and given Royal Assent on Nov. 20, 1964. This Act is the result of Sect. 51 (1) of the British North America Act which requires a readjustment of the representation of the provinces on the completion of each decennial census. The Electoral Boundaries Readjustment Act provides for the establishment of 10 Commissions, one for each province, to consider and report upon the readjustment of the representation of the provinces in the House of Commons.

Each Commission has one year in which to complete its report, which shall be transmitted to the Speaker who shall cause such report to be laid before the House of Commons. The report shall set forth the Commission's recommendations concerning the division of that province into electoral districts and its recommendations concerning the description of the boundaries of each such district and the representation and name to be given thereto.

10.—Electoral Districts, Voters on List and Votes Polled, Names and Addresses of Members of the House of Commons as Elected at the Twenty-sixth General Election, Apr. 8, 1963 and Revised to Apr. 30, 1965.

Speaker.....	Hon. ALAN A. MACNAUGHTON
Prime Minister.....	Rt. Hon. LESTER B. PEARSON
Leader of the Opposition.....	Rt. Hon. JOHN G. Diefenbaker
Clerk of the House of Commons.....	LÉON J. RAYMOND

NOTE.—The vote is summarized by provinces in Table 12, p. 90. The leaders of the political parties are indicated by asterisks (*). For Parliamentary Secretaries, see p. 76. This information, except the population of constituencies, has been supplied by the Chief Electoral Officer. Party affiliations are unofficial. Lib.=Liberal; P.C.=Progressive Conservative; S.C.=Social Credit; N.D.P.=New Democratic Party; R.c.=Ralliement créditiste; L.-Lab.=Liberal-Labour; Ind.=Independent.

¹ By-elections held between Apr. 30, 1965 and the date of going to press will be carried in an Appendix to this volume.

Indemnities and Allowances.—Members of the Senate and House of Commons receive a sessional allowance at the rate of \$12,000 per annum. In addition, for each session of Parliament, they may be paid travelling expenses between their place of residence or constituency and Ottawa as may be required for the performance of their duties as members of the Senate and House of Commons. Senators receive an annual expense allowance of \$3,000 and members of Parliament receive an expense allowance of \$6,000, neither of which is subject to income tax, and is payable quarterly. The member of the Senate occupying the recognized position as Leader of the Government in the Senate is paid, in addition to his sessional allowance, an annual allowance of \$10,000 and to the member of the Senate occupying the recognized position as Opposition Leader in the Senate there is paid, in addition to his sessional allowance, an annual allowance of \$6,000; but if the Leader of

the Government is in receipt of a salary under the Salaries Act the annual allowance is not paid. The remuneration of the Prime Minister is \$25,000 a year and of a Cabinet Minister and the Leader of the Opposition in the House of Commons \$15,000 a year in addition to the sessional and expense allowances each receives as a member of Parliament. The remuneration of a Minister without Portfolio is \$7,500 a year in addition to the sessional and expense allowances, the latter being not taxable. Additional annual allowances of \$4,000 (beyond the above-noted sessional allowance) are provided to each Leader of a Party having a recognized membership of twelve or more persons in the House of Commons other than the Prime Minister and the member occupying the recognized position as Leader of the Opposition in the House of Commons and, likewise, to the Chief Government Whip and to the Chief Opposition Whip in the House of Commons. The Speaker of the Senate and the Speaker of the House of Commons each receives, besides the sessional allowance and expense allowance, a salary of \$9,000 per annum. The Deputy Speaker of the House of Commons receives a salary of \$6,000 per annum. The Speakers of the Senate and the House of Commons are also entitled to \$3,000 in lieu of residence and the Deputy Speaker of the House of Commons an allowance of \$1,500 in lieu of residence; these allowances are not taxable. The Deputy Chairman of Committees receives an annual allowance of \$4,000. Parliamentary Secretaries to the Ministers of the Crown receive an annual allowance of \$4,000 a year, in addition to their sessional and expense allowances. A motor vehicle allowance of \$2,000 is paid to each Minister of the Crown and to the recognized Leader of the Opposition in the House of Commons, and a motor vehicle allowance of \$1,000 is paid to the Speakers of the Senate and of the House of Commons; these allowances are not taxable.

A member of Parliament contributes, by reservation, 6 p.c. of his full sessional indemnity toward his retirement allowance, which is based on five twelfths of the total contributions, paid or elected to be paid; to the widow of an ex-member is paid three fifths of the allowance paid or payable to the ex-member at the time of his death. The maximum allowance payable to an ex-member is \$9,000 per annum and the maximum payable to the widow of an ex-member is \$5,400 per annum.

An Act to make provision for the retirement of members of the Senate (SC 1965, c. 4) entitles a Senator appointed after June 2, 1965 to become a contributor under the provisions of the Members of Parliament Retiring Act. Senators appointed prior to that date and who have not attained the age of 75 years, who elect under the provisions of this Act, are also entitled to become contributors. Under the provisions of the Retirement Act, a Senator contributes, by reservation, 6 p.c. of his sessional indemnity to the Consolidated Revenue Fund. A Senator appointed before June 2, 1965 who (a) within one year of attaining the age of 75 years resigns his place in the Senate or (b) resigns due to some permanent infirmity disabling him from performing his duties in the Senate, may be granted an annuity equal to two thirds of his sessional indemnity for life. The widow of a person granted such an annuity may receive an annuity equal to one third of the annuity to the ex-member of the Senate.

Every former Prime Minister who held office for four years will receive from the Consolidated Revenue Fund an allowance of two thirds of the annual salary provided for Prime Ministers under the Salaries Act, the allowance to commence when the former Prime Minister ceases to hold office, or attains the age of 70 years, whichever is the later, and to continue during his lifetime. The widow of a Prime Minister will receive an annual payment of one third of the allowance that was being paid or that would have been paid to her husband, where he dies without receiving the allowance, such allowance to commence immediately after the death of her husband and to continue during her natural life or until her remarriage. None of these allowances is payable while the recipient is a Senator or a member of the House of Commons.

The Federal Franchise.—The present federal franchise laws are contained in the Canada Elections Act (SC 1960, c. 39). The franchise is conferred upon all Canadian citizens or British subjects, men and women, who have attained the age of 21 years, are ordinarily resident in the electoral district on the date of the issue of the writ ordering an election and, in the case of British subjects other than Canadian citizens, have been ordinarily resident in Canada for twelve months prior to polling day at such election. Persons denied the right to vote are:—

- (1) the Chief Electoral Officer and the Assistant Chief Electoral Officer;
- (2) judges appointed by the Governor General in Council;
- (3) the returning officer for each electoral district;
- (4) persons undergoing punishment as inmates of any penal institution for the commission of any offence;
- (5) persons restrained of their liberty or deprived of the management of their property by reason of mental disease; and
- (6) persons disqualified under any law relating to the disqualification of electors for corrupt and illegal practices.

Prior to July 1, 1960, the list of persons denied the right to vote included "Indians ordinarily resident on an Indian reserve who were not members of His Majesty's Forces in World Wars I or II or who did not execute a waiver of exemption under the Indian Act from taxation on and in respect of personal property". Legislation proclaimed on the above-mentioned date confers upon all Indians who have attained the age of 21 years the right to vote at federal elections, without taking from them any of the rights and privileges to which they are entitled under the Indian Act. The Eskimos who are Canadian citizens possess the right to vote in federal elections, and the assumption of that right in the far-flung communities of the Canadian Far North has grown with Government establishment of electoral districts and polling facilities.

The Canadian Forces Voting Rules set out in Schedule II to the Canada Elections Act prescribe voting procedure for members of the Armed Forces of Canada and also for veterans in receipt of treatment or domiciliary care in certain institutions.

12.—Voters on the Lists and Votes Polled at the Federal General Elections of 1958, 1962 and 1963

NOTE.—Corresponding statistics for the General Elections of 1911, 1917, 1921 and 1925 are given in the 1926 Year Book, p. 82; those for 1926 in the 1945 edition, p. 66; those for 1930 and 1935 in the 1948-49 edition, p. 94; those for 1940 in the 1956 edition, p. 81; those for 1945 in the 1957-58 edition, p. 57; and those for 1949, 1953 and 1957 in the 1962 edition, p. 71.

¹ Each voter in the double-member constituency of Queens County, P.E.I., had two votes; in 1963, 26,472 voters on the list cast 42,703 votes.

² Each voter in the double-member constituency of Halifax, N.S., had two votes; in 1963, 122,846 voters on the list cast 183,402 votes.

³ Electoral District of Yukon.

⁴ Electoral District of Mackenzie River in 1958 and 1962 and Electoral District of Northwest Territories in 1963.

Subsection 3.—The Judiciary

The Federal Judiciary

The Parliament of Canada is empowered by Sect. 101 of the British North America Act from time to time to provide for the constitution, maintenance and organization of a general Court of Appeal for Canada and for the establishment of any additional courts for the better administration of the laws of Canada. Under this provision, Parliament has established the Supreme Court of Canada, the Exchequer Court of Canada and certain miscellaneous courts.

Supreme Court of Canada.—This Court, first established in 1875 and now governed by the Supreme Court Act (RSC 1952, c. 259), consists of a chief justice, who is called the Chief Justice of Canada, and eight puisne judges. The chief justice and the puisne judges are appointed by the Governor in Council and they hold office during good behaviour but are removable by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and exercises general appellate jurisdiction throughout Canada in civil and criminal cases. The Court is also required to consider and advise upon questions referred to it by the Governor in Council and it may also advise the Senate or the House of Commons on private Bills referred to the Court under any rules or orders of the Senate or of the House of Commons.

Appeals may be brought from any final judgment of the highest court of final resort in a province in any case where the amount or value of the matter in controversy exceeds the sum of \$10,000. An appeal may be brought from any other final judgment with leave of the highest court of final resort in the province; if such court refuses to grant leave, the Supreme Court of Canada may grant leave to appeal. The Supreme Court may grant leave to appeal from any judgment whether final or not. Appeals in respect of indictable offences are regulated by the Criminal Code. Appeals from federal courts are regulated by the statute establishing such courts. The judgment of the Supreme Court of Canada in all cases is final and conclusive.

13.—Chief Justice and Judges of the Supreme Court of Canada, as at Apr. 30, 1965

(In order of seniority)

Name	Date of Appointment
Hon. Chief Justice ROBERT TASCHEREAU.....	Apr. 22, 1963 ¹
Hon. Justice JOHN R. CARTWRIGHT.....	Dec. 23, 1949
Hon. Justice J. H. GERALD FAUTEUX.....	Dec. 23, 1949
Hon. Justice DOUGLAS CHARLES ABBOTT.....	July 1, 1954
Hon. Justice RONALD MARTLAND.....	Jan. 15, 1958

Hon. Justice ROLAND A. RITCHIE.....	May 5, 1959
Hon. Justice EMMETT M. HALL.....	Nov. 23, 1962
Hon. Justice WISHART FLETT SPENCE.....	May 30, 1963

¹ First appointed a Judge of the Supreme Court, Feb. 9, 1940.

Exchequer Court of Canada.—The Exchequer Court was first established in 1875 as part of the Supreme Court of Canada but is now a separate court governed by the Exchequer Court Act (RSC 1952, c. 98). The Court consists of a president and six puisne judges who are appointed by the Governor in Council. The president and the puisne judges

hold office during good behaviour but may be removed by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and also at any other place in Canada where sittings may be fixed by the Court. The jurisdiction of the Court extends to cases where claims are made by or against the Crown in right of Canada. Proceedings against the Crown are taken by petition of right pursuant to the Petition of Right Act (RSC 1952, c. 210).

An appeal lies to the Supreme Court of Canada from any final judgment of the Exchequer Court in which the amount in controversy exceeds \$500; an appeal also lies with leave of the Supreme Court in certain cases where the amount in controversy does not exceed \$500 or where the judgment is not final.

The Exchequer Court also exercises admiralty jurisdiction in Canada. This was first conferred in 1891 by the Admiralty Act (SC 1891, c. 29) and is now governed by the Admiralty Act (RSC 1952, c. 1). Under this statute, the Exchequer Court is continued as a Court of Admiralty. The president and puisne judges of the Exchequer Court exercise admiralty jurisdiction throughout the whole of Canada. In addition, Canada is divided into various admiralty districts; a district judge in admiralty is appointed for each district. Appeals to the Supreme Court of Canada from judgments of the president or the puisne judges are governed by the general appeal provisions in the Exchequer Court Act. Appeals may be taken from a final judgment of a district judge in admiralty either to the Exchequer Court or direct to the Supreme Court of Canada.

Miscellaneous Courts.—*Railway Act.*—The Railway Act, 1903 (RSC 1952, c. 234) established the Board of Railway Commissioners for Canada as a court of record; by the Transport Act, 1938 (RSC 1952, c. 271) the name was changed to the Board of Transport Commissioners for Canada. This court exercises jurisdiction with respect to railway matters. The Governor in Council is given jurisdiction to vary any order of the Board and an appeal lies from the Board to the Supreme Court of Canada upon a question of jurisdiction or a question of law.

Bankruptcy Act.—By virtue of Sect. 91(21) of the British North America Act, 1867, Parliament has exclusive legislative jurisdiction in relation to bankruptcy and insolvency. By the Bankruptcy Act (RSC 1952, c. 14) the superior courts of the provinces are constituted bankruptcy courts; original jurisdiction is conferred upon the trial courts and appellate jurisdiction is conferred upon the appeal courts of the provinces.

Income Tax Act and Estate Tax Act.—By the Income Tax Act (RSC 1952, c. 148) the Tax Appeal Board is established consisting of a chairman and not fewer than two or more than four members with jurisdiction over appeals against income tax assessments. A further appeal may be taken to the Exchequer Court. Under the Estate Tax Act (SC 1958, c. 29) the Tax Appeal Board also has jurisdiction to hear appeals from assessments under that Act.

National Defence Act.—The Court Martial Appeal Court was established in 1959 by an amendment to the National Defence Act (SC 1959, c. 5). The judges of the Court are not fewer than four judges of the Exchequer Court of Canada designated by the Governor in Council and such additional judges of a superior court of criminal jurisdiction as are appointed by the Governor in Council. The Governor in Council designates one of the judges to be President of the Court. The Court hears appeals from courts martial respecting the legality of a finding of guilty on any charge and the legality of a sentence passed by a court martial. An appeal lies from the Court Martial Appeal Court to the Supreme Court of Canada on a question of law only.

Provincial and Territorial Judiciaries*

Certain provisions of the British North America Act govern to some extent the provincial judiciaries. Under Sect. 92 (14) the legislature of each province exclusively may make laws in relation to the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction. Sect. 96 provides that the Governor General shall appoint the judges of the superior, district and county courts in each province, except those of the courts of probate in Nova Scotia and New Brunswick. Sect. 100 provides that the salaries, allowances and pensions of judges of the superior, district and county courts (except the courts of probate in Nova Scotia and New Brunswick) are to be fixed and provided by the Parliament of Canada and these are set out in the Judges Act (RSC 1952, c. 159 and amendments). Under Sect. 99, the judges of the superior courts hold office during good behaviour but are removable by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The tenure of office of district and county court judges is fixed by the Judges Act as being during good behaviour and their residence within the area for which the court is established.

All provinces have minor courts with limited civil and criminal jurisdiction, the judges of which are appointed by provincial authority as, for example, justices of the peace, magistrates and juvenile court judges. Except in Quebec, there are county or district courts of each province with limited jurisdiction varying from \$500 to \$2,500 in amount. Each province has a superior court with virtually unlimited jurisdiction variously known as Court of Queen's Bench, Supreme Court, Superior Court, etc. There is also a Court of Appeal in each province.

The Yukon Act and the Northwest Territories Act each provide for a superior court of record in and for the Territory, called the Territorial Court, and consisting of one or more judges appointed by the Governor in Council. The judges of the Territorial Court of the Yukon Territory are *ex officio* judges of the Territorial Court of the Northwest Territories and vice versa. In 1960 the two Acts were amended to provide for a Court of Appeal in each of the Territories. Police magistrates and justices of the peace have jurisdiction in minor civil and criminal cases.

Section 2.—Provincial and Territorial Governments†

In each of the provinces, The Queen is represented by a Lieutenant-Governor appointed by the Governor General in Council. The Lieutenant-Governor acts on the advice and with the assistance of his Ministry or Executive Council which is responsible to the Legislature and resigns office under circumstances similar to those described on p. 79 concerning the Federal Government.

The Legislature of each province is unicameral, consisting of the Lieutenant-Governor and a Legislative Assembly, except for the Province of Quebec where there is a Legislative Council as well as a Legislative Assembly. The Legislative Assembly is elected by the people for a statutory term of five years but may be dissolved within that period by the Lieutenant-Governor on the advice of the Premier of the province.

The source of legislative authority of the Provincial Legislatures is the British North America Act, 1867 (Br. Stat. 1867, c. 3 and amendments). Under Sect. 92 of the Act, the Legislature of each province exclusively may make laws in relation to the following

* More detailed information concerning provincial judiciaries is given in the 1954 Year Book, pp. 48-55.

† The information given in Subsections 1 and 3 to 10 of this Section is brought up to Apr. 30, 1965; Subsection 2 is as at June 15, 1965, the date of a major Cabinet change in Prince Edward Island. Any important changes occurring between those dates and the time of going to press will be found in an Appendix to this volume.

matters: amendment of the constitution of the province except as regards the Lieutenant-Governor; direct taxation within the province; borrowing of money on the credit of the province; establishment and tenure of provincial offices and appointment and payment of provincial officers; the management and sale of public lands belonging to the province and of the timber and wood thereon; the establishment, maintenance and management of public and reformatory prisons in and for the province; the establishment, maintenance and management of hospitals, asylums, charities and eleemosynary institutions in and for the province, other than marine hospitals; municipal institutions in the province; shop, saloon, tavern, auctioneer and other licences issued for the raising of provincial or municipal revenue; local works and undertakings other than interprovincial or international lines of ships, railways, canals, telegraphs, etc., or works which, though wholly situated within one province, are declared by the Federal Parliament to be for the general advantage either of Canada or of two or more provinces; the incorporation of companies with provincial objects; the solemnization of marriage in the province; property and civil rights in the province; the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction including procedure in civil matters in these courts; the imposition of punishment by fine, penalty or imprisonment for enforcing any law of the province relating to any of the aforesaid subjects; generally all matters of a merely local or private nature in the province.

Further, in and for each province the Legislature exclusively may, under Sect. 93, make laws in relation to education subject to certain restrictions relating to the establishment of schools by religious minorities. These powers with similar restrictions were conferred on the more recently admitted provinces on their inclusion in the federation.

The Provincial Legislatures may also make laws under Sect. 95 in relation to agriculture and immigration, subject to any laws of the Parliament of Canada in relation to these subjects.

Provincial Franchise.—Details regarding qualifications and disqualifications of the franchise are contained in the Elections Act of each province. In general, every person, male or female, at a specified age (18 to 21 years) who is a Canadian citizen or other British subject, who complies with certain residence requirements in the province and the electoral district of polling and who falls under no statutory disqualifications, is entitled to vote. Voting privileges are given to persons in Quebec and Saskatchewan at the age of 18, in Newfoundland,* Alberta and British Columbia at 19 years, and in the remaining provinces at 21 years.

Subsection 1.—Newfoundland

The Government of Newfoundland consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. The Legislative Assembly has 42 members elected for a term of five years. The Legislature elected Nov. 19, 1962 is the 33rd in the history of Newfoundland and the 5th since Confederation.

Since the date of Confederation, Mar. 31, 1949, the province has had four Lieutenant-Governors: the Hon. Sir Albert Joseph Walsh commissioned Apr. 1, 1949; the Hon. Lt.-Col. Sir Leonard Outerbridge commissioned Sept. 5, 1949; the Hon. Campbell Macpherson commissioned Dec. 16, 1957; and the Hon. Fabian O'Dea commissioned Mar. 1, 1963. The first Ministry, formed on July 13, 1949 under the leadership of the Hon. Joseph R. Smallwood, was still in office on Apr. 30, 1965.

The Premier receives a salary of \$10,000 and the other Cabinet Ministers \$9,000 per annum, plus a sessional indemnity of \$3,833.33 and a travelling and expense allowance of \$2,666.66. Each member of the House of Assembly receives a sessional indemnity of \$3,833.33 plus a travelling and expense allowance of \$2,666.66. An additional allowance of \$3,000 is made to the Leader of the Opposition.

* Under the Newfoundland Act, 1964 (not yet proclaimed by May 1965).

14.—First Ministry of Newfoundland, as at Apr. 30, 1965

(Party standing at latest General Election, Nov. 19, 1962: 34 Liberal, 7 Progressive Conservative and 1 Independent.)

Subsection 2.—Prince Edward Island

The Government of Prince Edward Island consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Lieutenant-Governors from Confederation (1873) to 1959 are cited in the 1960 Year Book, p. 105; since that date, the position has been held by the Hon. F. W. Hyndman, appointed effective Mar. 31, 1958, followed by the Hon. W. J. MacDonald, appointed effective Aug. 1, 1963.

The General Assembly elected Dec. 10, 1962 is the 50th in the history of Prince Edward Island Legislatures and the 25th since Confederation. It has 30 members from 15 electoral districts who serve for a statutory term of five years. One half of the members of the Legislative Assembly are elected on a property vote. Each district elects one Councillor (elected on a property vote) and one Assembly member (elected on a general franchise vote). Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 105.

The annual salary of the Premier is \$8,000 and that of a Cabinet Minister \$5,000. Each member of the Assembly is paid \$2,000 for each session attended by him and an additional \$1,000 tax free as indemnity for expenses and travelling. The Speaker is paid an additional \$666.60 and a further additional \$333.40 tax free as indemnity for expenses and travelling. The Leader of the Opposition is paid an additional \$1,000 and a further additional \$500 tax free for expenses and travelling.

15.—Legislatures of Prince Edward Island, 1945-65, as at June 15, 1965

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 75; for 1924-35 in the 1935 edition, p. 110; and for 1936-43 in the 1963-64 edition, p. 82.

Subsection 3.—Nova Scotia

The Government of Nova Scotia consists of a Lieutenant-Governor, an Executive Council and a House of Assembly. Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 106; since that date the position has been held by Maj.-Gen. the Hon. E. C. Plow, commissioned to office Sept. 1, 1958, followed by the Hon. H. P. MacKeen, commissioned to office Mar. 1, 1963.

The Legislature has 43 members elected for a maximum term of five years. The Legislature elected Oct. 8, 1963 is the 48th in Nova Scotia's history and the 25th since Confederation. Premiers since Confederation are listed in the 1960 Year Book, p. 107.

The Premier of the province receives a salary of \$12,000 per annum and each Cabinet Minister a salary of \$10,000 per annum and \$800 per annum as expenses of representation. Each member of the House of Assembly receives a sessional indemnity of \$4,000 and an allowance of \$2,000 for expenses incidental to the discharge of his duties. The Leader of the Opposition receives an allowance of \$7,200 and \$800 representation allowance in addition to his sessional indemnity.

17.—Legislatures of Nova Scotia, 1945-65, as at Apr. 30, 1965

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 76; for 1924-33 in the 1938 edition, p. 111; and for 1939-44 in the 1963-64 edition, p. 83.

Subsection 4.—New Brunswick

The Government of New Brunswick has a Lieutenant-Governor, an Executive Council and a House of Assembly. The Hon. J. Leonard O'Brien, Lieutenant-Governor at Apr. 30, 1964, was commissioned to office June 6, 1958. Lieutenant-Governors since Confederation (1867) are cited in the 1960 Year Book, p. 108.

The Legislature elected Apr. 22, 1963 is the 45th in New Brunswick's history and the 18th since Confederation. It has 52 members who are elected for a statutory term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 108.

The Premier receives \$7,500 per annum in addition to the salary for any other portfolio he may hold. The salary of each Cabinet Minister is \$10,000 and the amount paid as indemnity to each member of the House of Assembly is \$3,400 plus an additional \$1,700 allowance for expenses. The Leader of the Opposition receives an additional \$6,000 and the Speaker receives an allowance of \$4,000 in addition to the regular indemnity.

19.—Legislatures of New Brunswick, 1945-65, as at Apr. 30, 1965

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 77; for 1924-35 in the 1938 edition, p. 112; and for 1936-44 in the 1963-64 edition, p. 84.

Subsection 5.—Quebec

The Government of Quebec consists of a Lieutenant-Governor, an Executive Council and a bicameral legislature—the Legislative Council and the Legislative Assembly. Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 109; since that date the position has been held by the Hon. Onésime Gagnon, commissioned to office Feb. 14, 1958, followed by the Hon. Paul Comtois, commissioned to office Oct. 6, 1961.

The Legislative Council has 24 members nominated for life by the Lieutenant-Governor in Council. The Legislative Assembly has 95 elected members and, like the Legislative Council, has the power to bring forward Bills relating to civil and administrative matters and to the amendment or repeal of existing laws. A Bill to be approved by the Lieutenant-Governor must have received the assent of both Houses. Only the Legislative Assembly can bring forward a Bill requiring the expenditure of public money. The maximum life of a legislature is five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 110.

Each member of the Legislative Council and the Legislative Assembly receives a sessional indemnity of \$10,000, plus an expense allowance of \$2,000 to each Legislative Councillor and \$5,000 to each member of the Legislative Assembly. In addition to this sessional indemnity and allowance, the Premier receives an annual indemnity of \$12,000, an expense allowance of \$4,000 and a lodging allowance of \$2,000; Ministers with Portfolio each receive an annual indemnity of \$10,000 plus a \$5,000 expense allowance; Ministers without Portfolio each receive an indemnity of \$5,000 plus a \$2,000 expense allowance; the Speaker of the Legislative Assembly receives an indemnity of \$8,000, an expense allowance of \$1,000 and a lodging allowance of \$1,000 and the Deputy Speaker receives an indemnity of \$5,000 and an expense allowance of \$1,000; the Leader of the Opposition in the Assembly

receives an indemnity of \$8,000, an expense allowance of \$2,000 and a lodging allowance of \$2,000; the Leader of the Government and the Leader of the Opposition in the Legislative Council each receive an additional sessional indemnity of \$2,000 plus a \$3,000 expense allowance.

21.—Legislatures of Quebec, 1945-65, as at Apr. 30, 1965

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 78; for 1924-35 in the 1938 edition, p. 113; and for 1936-44 in the 1963-64 edition, p. 85.

Subsection 6.—Ontario

The Government of Ontario consists of a Lieutenant-Governor, an Executive Council and a House of Assembly. Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 112; since that date, the position has been held by the Hon. Justice John Keiller Mackay, appointed effective Dec. 30, 1957, followed by the Hon. William Earl Rowe, appointed effective Mar. 1, 1963.

The House of Assembly, the single-chamber Legislature of the province, is composed of 108 members elected for a statutory term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 112; the Hon. John Parmenter Robarts became Premier on Nov. 8, 1961 upon the resignation of the Hon. Leslie M. Frost, Premier from May 4, 1949.

Besides the regular departments of government, the Niagara Parks Commission, the Ontario Municipal Board, The Hydro-Electric Power Commission of Ontario, the Ontario-St. Lawrence Development Commission, the Ontario Northland Transportation Commission, the Liquor Control Board, the Liquor Licence Board, the Hospital Services Commission and The Water Resources Commission have been created.

Under the provisions of the Legislative Assembly Act (RSO 1960, c. 208 as amended) each member of the Assembly is paid an annual indemnity of \$8,000 and an allowance for expenses at the rate of \$3,000 for every member of the Assembly representing an electoral district within the Municipality of Metropolitan Toronto and \$4,000 for every member representing any other electoral district. In addition, the Speaker receives a special indemnity at the annual rate of \$3,000 and an expense allowance of \$2,000; the Chairman of the Committee of the Whole a special indemnity at the annual rate of \$2,000; and the Leader of the Opposition a salary of \$12,000 per annum in addition to his indemnity as a member. Each member of the Cabinet having charge of a department receives the ordinary indemnity as a member of the Legislature in addition to his salary as a Minister of the Crown. The salary provided in the Executive Council Act for the Premier is \$16,000 and for a Cabinet Minister having charge of a department \$12,000. By the 1956 amendment, every Minister of the Crown in charge of a department, the Minister of the Crown who is

a member of The Hydro-Electric Power Commission of Ontario, and the Leader of the Opposition receives a representation allowance of \$2,000 per annum. Each Minister without Portfolio, other than the Minister who is a member of The Hydro-Electric Power Commission, receives \$2,500 salary and \$1,000 representation allowance per annum, by the Executive Council Act and the Legislative Assembly Act, respectively (RSO 1960).

24.—Legislatures of Ontario, 1945-65, as at Apr. 30, 1965

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 79; for 1924-34 in the 1933 edition, p. 114; and for 1935-45 in the 1963-64 edition, p. 87.

Subsection 7.—Manitoba

In addition to a Lieutenant-Governor, Manitoba has an Executive Council at present composed of 13 members and a Legislative Assembly of 57 members elected for a statutory term of five years. The Hon. Errick F. Willis, Lieutenant-Governor at Apr. 30, 1965, was sworn in on Jan. 15, 1960. Lieutenant-Governors from Confederation (1870) to 1959 are cited in the 1960 Year Book, p. 113. Premiers since Confederation are listed in the 1960 Year Book, p. 114.

The Premier of the province is paid a salary of \$14,500 per annum and each of the other members of the Cabinet \$12,500. Members of the Legislature are each paid a sessional indemnity of \$3,200 and an expense allowance of \$1,600 plus an allowance of \$10 a day for a period of 60 days continuous sitting including Saturdays and Sundays. The Leader of the Opposition is paid an additional amount of \$6,000 and the Speaker of the Legislature receives \$9,600 which is an amount equal to double the indemnity and expense allowance of an individual member.

26.—Legislatures of Manitoba, 1945-65, as at Apr. 30, 1965

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 80; for 1924-36 in the 1938 edition, p. 115; and for 1937-45 in the 1963-64 edition, p. 88.

Subsection 8.—Saskatchewan

The Government of Saskatchewan consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Lieutenant-Governors from Confederation (1905) to 1959 are cited in the 1960 Year Book, p. 115; since that date the office has been held by the Hon. F. L. Bastedo, commissioned to office Jan. 27, 1958, followed by the Hon. Robert L. Hanbidge, commissioned to office Mar. 1, 1963.

The statutory number of members of the Legislative Assembly is 59, elected for a maximum term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 115.

The Premier receives \$13,000 and each Cabinet Minister \$10,000 annually in addition to a sessional indemnity. The Leader of the Opposition receives \$10,000 plus an office allowance of \$12,000 per annum, the Speaker \$3,000 and the Deputy Speaker \$2,000. The sessional indemnity of a member of the Legislature is \$4,000 together with an expense

allowance of \$2,000. Each of the members for the three northernmost constituencies of Cumberland, Athabasca and Meadow Lake receives a \$4,335 sessional indemnity and a \$2,165 expense allowance.

28.—Legislatures of Saskatchewan, 1945-65, as at Apr. 30, 1965

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 81; for 1924-34 in the 1938 edition, p. 116; and for 1935-44 in the 1963-64 edition, p. 89.

Subsection 9.—Alberta

The Government of Alberta is composed of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. There are 63 members in the Legislative Assembly, elected for a maximum period of five years. The Hon. J. Percy Page, Lieutenant-Governor at Apr. 30, 1965, was commissioned to office Dec. 19, 1959. Lieutenant-Governors from Confederation (1905) to 1959 are listed in the 1960 Year Book, p. 116. Premiers since Confederation are listed in the same edition, p. 117.

Each member of the Legislative Assembly (except the Speaker, the Deputy Speaker and the Leader of the Opposition) receives a sessional indemnity of \$3,600 plus \$1,800 expense allowance plus \$15 for each day during the session when the member is necessarily absent from his ordinary place of residence, both tax free. The Speaker's sessional indemnity is \$6,000 plus \$3,000 expense allowance, the Deputy Speaker's sessional indemnity is \$4,800 plus \$2,400 expense allowance, and the Leader of the Opposition's sessional indemnity is \$7,600 plus \$3,800 expense allowance. Each also receives \$15 for each day during the session when he is necessarily absent from his ordinary place of residence. The Premier, in addition to the sessional indemnity, receives \$16,000 and each of the other Ministers receives \$12,500.

30.—Legislatures of Alberta, 1945-65, as at Apr. 30, 1965

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 82; for 1924-34 in the 1938 edition, p. 117; and for 1935-44 in the 1963-64 edition, p. 90.

Subsection 10.—British Columbia

The Government of British Columbia has a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Maj.-Gen. the Hon. George Randolph Pearkes, Lieutenant-Governor at Apr. 30, 1965, was commissioned to office Oct. 12, 1960. Lieutenant-Governors from Confederation (1871) to 1959 are cited in the 1960 Year Book, p. 118.

The Legislative Assembly, elected for a statutory term of five years, has 52 members. Premiers from Confederation to 1959 are cited in the 1960 Year Book, p. 118.

Each member of the Executive Council and the Legislative Assembly receives a sessional allowance of \$5,000 and \$1,500 for expenses. There is also paid to each member a living allowance of \$1,000 and each member receives an allowance of 25 cents per mile of the

distance between his place of residence and the city of Victoria, reckoning such distance, going and coming, according to the nearest mail route. Each member also receives an allowance of \$500 for telegraph and telephone expenses. In addition, the Premier receives a salary of \$20,000 and each member of the Executive Council a salary of \$17,500. The Leader of the Opposition receives a special allowance of \$7,500 for expenses, the Speaker receives a special allowance of \$7,500, and the Deputy Speaker a special allowance of \$2,500.

32.—Legislatures of British Columbia, 1945-65, as at Apr. 30, 1965

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 83; for 1924-37 in the 1938 edition, p. 118; and for 1938-45 in the 1963-64 edition, p. 91.

Subsection 11.—Yukon Territory and Northwest Territories

Yukon Territory.—The Yukon was created a separate Territory in June 1898 (see p. 72). Provision is made for a local government administered by a Commissioner appointed by the Governor in Council. There is an elected Council of seven members (1961) which usually meets twice each year in Whitehorse, the seat of local government; the Council elects its own speaker. The Commissioner administers the government under instructions from the Governor in Council or the Minister of Northern Affairs and National Resources. The Commissioner in Council has power to make ordinances dealing with the imposition of local taxes, sale of liquor, preservation of game, establishment of territorial offices, maintenance of municipal institutions, issue of licences, incorporation of companies, solemnization of marriage, property and civil rights, and generally all matters of a local nature in the Territory. The Commissioner and Council in office on Apr. 30, 1965 were elected in 1964 for a three-year term.

Territorial Treasurer.....	K. MCKENZIE
Legal Adviser.....	C. P. HUGHES

The Northern Administration Branch, Department of Northern Affairs and National Resources, has the responsibility for the general administration of the natural resources of the Yukon Territory, except game. The Department maintains lands and mining offices at four points in the Territory. Other departments and agencies of the Federal Government, including the Department of Justice, the Royal Canadian Mounted Police, the Departments of National Defence, Citizenship and Immigration, Mines and Technical Surveys, National Revenue, Transport, Post Office, Agriculture, Fisheries, and Public Works and the Unemployment Insurance Commission also maintain offices in the Yukon Territory.*

Northwest Territories.—As reconstituted on Sept. 1, 1905, the Northwest Territories comprise: (1) all that part of Canada north of the 60th parallel of north latitude, except the portions thereof within the Yukon Territory and the Provinces of Quebec and Newfoundland; and (2) the islands in Hudson Bay, James Bay and Ungava Bay, except those islands within the Provinces of Manitoba, Ontario and Quebec.

The Northwest Territories Act (RSC 1952, c. 331) provides for the appointment of a Commissioner to administer the government of the Territories under instructions given from time to time by the Governor in Council or the Minister of Northern Affairs and National Resources. The Northwest Territories Act, as amended, also provides for a Council of nine members, four of whom are elected in the Mackenzie District and five of whom are appointed by the Governor in Council. The Commissioner in Council has legislative powers respecting such matters as direct taxation, establishment and tenure of Territorial offices, municipal institutions, controverted elections, licences, incorporation of

* Further information on officials of various Federal Government departments serving the Yukon Territory may be obtained from the Director, Northern Administration Branch, Department of Northern Affairs and National Resources, Ottawa.

companies, property and civil rights, administration of justice, game, education, hospitals and generally all matters of a local or private nature. The Council meets once each year in the Territories and at least once each year in Ottawa, which is the seat of government. The resources, except game, remain under the control of the Federal Government. The administration of legislation passed by the Commissioner in Council and the management of resources under federal legislation are conducted by the Northern Administration Branch of the Department of Northern Affairs and National Resources. Administrative offices are located at a number of centres in the Territories including Fort Smith, Yellowknife, Hay River, Inuvik and Frobisher Bay.

COUNCIL OF THE NORTHWEST TERRITORIES

(as at Apr. 30, 1965)

Commissioner	B. G. SIVERTZ
Deputy Commissioner	(Vacant)
Members of the Council—	
Appointed.....	FRANK VALLÉE HUGH CAMPBELL ROBERT N. HARVEY STUART M. HODGSON (One Vacancy)
Elected.....	LYLE R. TRIMBLE JOHN W. GOODALL PETER BAKER ROBERT PORRITT
Officers of the Council—	
Secretary.....	F. H. MURPHY
Legal Adviser.....	DR. HUGO FISCHER

In May 1965, it was announced by the Minister of Northern Affairs and National Resources that an Advisory Commission on the Development of Government in the Northwest Territories was being set up to study the practical problems involved, seek the views of northern residents and recommend to the Federal Government the steps required to provide a greater measure of self-government to the Northwest Territories. The three-member Commission is an impartial, fact-finding group, its members being drawn from fields outside government; its report will be presented to the Government early in 1966.

Section 3.—Municipal Government*

The British North America Act of 1867 placed municipal government in Canada under the control of the provincial legislatures. The powers and responsibilities of municipalities are those delegated to them by statutes passed by their respective provincial legislatures. Some of these statutes apply to all municipalities within a province, some to a certain type or group and many to one municipality only. The types of municipal organization in existence and the nature of the municipal services provided vary greatly from region to region and are adjusted from time to time to meet changing needs and conditions.

In addition to the well-known types of organized municipalities—cities, towns, villages, counties, etc.—there are various other forms of local government organization. Certain municipal government bodies encompass a number of municipalities or parts of municipalities. For example, special district authorities (greater water and sewerage and drainage districts, irrigation districts and health units) may provide services to a number of municipalities. Similarly, metropolitan government authorities provide certain services to a number of area municipalities. In some provinces, the more sparsely settled areas do not have organized municipalities. Instead, they are divided into local improvement districts, local government districts or special areas in which the local government services are administered by officials appointed by the provincial Departments of Municipal Affairs.

* Revised (as at Jan. 1, 1965) in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

The major local revenue source available to municipalities is the taxation of real property. It is supplemented in varying degrees by taxation of personal property, business, persons (poll taxes) and tenants. In two provinces municipalities may levy an amusement tax, in three they may impose sales taxes on specific commodities. Miscellaneous general revenue is derived from licences, permits, rents, concessions, franchises and fines. A great many municipalities operate utilities for the provision of water and, in many instances, electricity, gas, transportation, telephone and other services. These sometimes provide surplus funds that may become available to help pay for other municipal services. On the other hand, expenditures of municipalities often include provision for the deficits of their utilities and enterprises.

In differing degrees and with varying provincial assistance, municipalities are responsible for the following services: protection to persons and property through police and fire forces, courts and local gaols, and inspection services; roads and streets; sanitation; certain health and welfare services; and some recreation and other community services. In most provinces, municipalities are responsible for levying and collecting local education taxes on behalf of the local schools, and often for borrowing capital funds for school construction. Local administrative responsibility for education lies with boards of trustees separate from the councils that govern municipalities (except Alberta; see p. 110).

All provinces give some form of financial assistance to their municipalities. This may be in the form of monetary grants, such as unconditional subsidies which may be spent as the municipalities see fit, or grants-in-aid of specific services that are the municipal responsibility. The provinces may also make loans to municipalities for capital purposes or guarantee the bonds issued by the municipalities. Other forms of indirect assistance are the resumption by the provincial governments of responsibilities formerly delegated to the municipalities and the extension of municipal taxing privileges into what were formerly considered to be provincial revenue fields. The provinces also provide various technical and consultative services to their municipalities.

The following paragraphs describe municipal organization in each province and in the Territories as at Jan. 1, 1965. In Table 34 (which gives the number of each type of municipality in each province) all fully incorporated cities, towns and villages are regarded as 'urban' municipalities.

Newfoundland.—The Province of Newfoundland has two cities—St. John's and Corner Brook. A number of the province's many settlements have been organized into 49 towns, four rural districts, seven local improvement districts and 51 local government communities. The towns, rural districts and local improvement districts operate under the Local Government Act; towns and rural districts have elected councils and local improvement districts have appointed trustees. Local government communities established under the Community Councils Act in the smaller settlements have limited powers and functions. There are no rural municipalities in the usual sense. Only about one fifth of 1 p.c. of the total area is municipally organized. Municipalities are supervised by the Department of Municipal Affairs and Supply.

Prince Edward Island.—In this province, one city and seven towns have been incorporated under special Acts and 17 villages have been established under the Village Services Act. There is no municipal organization for the remainder of the province although it is divided into school sections which have elected school boards.

Nova Scotia.—Municipal organization in Nova Scotia covers the whole of the province. The three cities operate under special charters and special legislation. Thirty-nine towns operate under the Town Incorporation Act but there are no municipalities incorporated

as villages. Cities and towns are independent of counties. The rural area is divided into 18 counties which, in themselves, do not represent units of local government. However, 12 of these counties each comprise one municipality and the other six each comprise two municipalities, making a total of 24 rural municipalities. Supervision of municipalities is exercised through the Department of Municipal Affairs.

New Brunswick.—This province is divided into 15 counties which are incorporated municipalities and have direct powers of local self-government as rural municipalities, although certain of their powers often apply in both rural and urban municipalities. The seven cities have special charters and the 20 towns operate under the Towns Incorporation Act. There is also one village. There are 57 local improvement districts and 10 commissions within the counties but outside the cities, towns and village; these have been incorporated for the provision of limited municipal services. The Department of Municipal Affairs exercises supervision.

Quebec.—Municipal divisions in Quebec embrace the more thickly settled areas comprising about one third of the province and the remainder is governed by the province as 'territories'. The organized area is divided into 74 county municipalities which are divided again into local municipalities and designated as village, township or parish municipalities or simply as municipalities. The counties as such have no direct powers of taxation. Funds to finance the services falling within their jurisdiction are provided by the municipalities forming part thereof. Parts of some counties are not yet organized into incorporated units of local government, being in outlying areas and having little or no population. There are 325 villages and 1,110 townships and parishes. A small number of these are independent of the counties in which they are located. The Municipal Code governs local municipalities and the 65 cities and 180 towns have special Acts. The supervision and assistance of municipalities is through the Department of Municipal Affairs and the Quebec Municipal Commission. Municipal statistics are gathered by the Quebec Bureau of Statistics.

The active functions of the Montreal Metropolitan Corporation are limited because of the ability of the area municipalities to fulfil their own obligations. The Corporation services borrowings contracted before Apr. 1, 1961, when the Montreal Metropolitan Boulevard became a provincial responsibility, and apportions costs incurred in the area municipalities for streets constructed on each side of the Boulevard.

Ontario.—Slightly more than one tenth of the area of Ontario is municipally organized and the remainder is governed entirely by the provincial government. The older settled section of the province is divided into 43 counties, five of which are united with others for administrative purposes. Each county, although it is an incorporated municipality, is comprised of the towns, villages and townships situated within its borders and these provide its revenue. There are 32 cities, 157 towns, 159 villages, 572 townships and 18 improvement districts in the province. Some of each are located in the northern districts which are not organized into counties. Supervisory control of municipalities is exercised by the Department of Municipal Affairs and the Ontario Municipal Board under the Municipal Act and other Acts governing aspects of municipal government.

The Municipality of Metropolitan Toronto, in existence since Jan. 1, 1954, encompasses one city, four towns, three villages and five townships. The Metropolitan Council is composed of the mayor, two senior controllers and the senior alderman of each of the nine wards of the City of Toronto, and the head of the council of each of the 12 suburban municipalities. The chairman is elected by the councillors and need not be a councillor of an area municipality. The Council has jurisdiction over assessments, water supply,

sewerage works, metropolitan road systems, transit, municipal housing developments, community planning, parks and recreation areas, the Court House, certain health and welfare services and the correlation of educational facilities in the metropolitan area. It also controls a unified metropolitan police force and a metropolitan licensing commission. Expenditures are financed by a levy apportioned among the area municipalities. All borrowing of the area municipalities for capital purposes is done by the Municipality of Metropolitan Toronto.

Manitoba.—Manitoba has nine cities, which derive their powers from special Acts and do not come under the supervision of the Department of Municipal Affairs. The Department supervises the 36 towns, 41 villages and 110 rural municipalities under the Municipal Act. There are local government districts in settled areas not within municipalities where the province has placed a resident administrator to carry out the functions of a municipal council. The unorganized areas are the direct responsibility of the provincial government.

The Metropolitan Corporation of Greater Winnipeg has been in existence since Nov. 1, 1960. Its council is separate and distinct from those of the 16 area municipalities. The councillors are elected as individuals from ten new districts, each containing approximately the same number of voters. The council has jurisdiction over planning, zoning, land development, assessments, arterial roads, water supply, sewage disposal, transit and other services. It borrows money only for its own undertakings and leaves to its area municipalities the responsibility for welfare, police, fire protection and other services. Expenditures are financed by a proportion of the business and other taxes levied on industrial or commercial property by the area municipalities and by a uniform levy on the equalized assessment of all taxable real property in the area municipalities.

Saskatchewan.—All municipalities in Saskatchewan derive their powers from general Acts that are designated with the name of the type of municipality. There are 11 cities, 121 towns, 364 villages and 296 rural municipalities. The area so organized consists of most of the southern two fifths of the province; the remainder of this portion is administered for local purposes by the province in unincorporated local improvement districts. The northern three fifths is sparsely populated and without local government, although some municipal services are provided by the province through operation of the Northern Administration District. Municipalities are supervised by the Department of Municipal Affairs.

Alberta.—The whole Province of Alberta is under some type of municipal organization. The province has an Act applying to each type of municipality and under these Acts the Department of Municipal Affairs supervises the nine cities, 89 towns, 167 villages, 20 municipal districts and 28 counties. The latter administer schools as well as municipal services. Municipal government for the 51 improvement districts and three special areas is provided by the Department of Municipal Affairs.

British Columbia.—Less than one half of 1 p.c. of the area of British Columbia is organized into municipalities. Additional small areas have sufficient population to require administration of local activities by the provincial government. There are 32 cities, eight towns, 58 villages and 32 districts; the latter are mostly rural municipalities although there are some districts adjacent to the principal cities of Victoria and Vancouver that are largely urban in character. It should be emphasized, however, that the application of the name 'city' is somewhat different from the commonly accepted meaning, in that several of them have populations of fewer than 3,000 and perhaps one half or more would not normally be incorporated as cities in another province. Municipalities are supervised by the Department of Municipal Affairs.

In addition to the above types of municipalities, there are unincorporated improvement districts that have been set up to provide certain municipal services such as protection, waterworks, irrigation, etc. These districts are under the supervision of the Department of Lands, Forests, and Water Resources.

Yukon and Northwest Territories.—There are two cities, Whitehorse and Dawson, and one unincorporated town, Mayo, in the Yukon Territory and two municipal districts, Yellowknife and Hay River, in the Northwest Territories, all of which provide some municipal services to their local areas. These are not shown in Table 34.

¹ Municipalities grouped according to their official nomenclature, which is roughly indicative of size and nature (see footnote 9).

² Municipalities grouped under the classification devised by the Dominion-Provincial Conferences on Municipal Statistics, designed to bring municipalities into comparable groups for statistical presentation.

³ Includes the 57 local improvement districts; excludes commissions.

⁴ The Montreal Metropolitan Corporation.

⁵ The Municipality of Metropolitan Toronto.

⁶ Designated by the province as towns (49), rural districts (4) and local improvement districts (7); all operate under the same Act.

⁷ Classified by the province as community councils.

⁸ Rural municipalities are designated by different names in the different provinces.

⁹ Includes the 18 improvement districts.

¹⁰ Includes the 5 units of self-government known as suburban municipalities; excludes the unincorporated local government districts.

¹¹ Excludes the 12 unincorporated local improvement districts.

¹² Includes the 26 county municipalities; excludes the unincorporated improvement districts and the special areas.

¹³ Excludes the unincorporated improvement districts and the 2 local districts.

¹⁴ Includes the Inter-Urban Corporation of Ile Jésus (formerly Laval County).

¹⁵ Includes municipalities shown wholly or partly in metropolitan areas by the 1961 Census, with subsequent revisions to take care of annexations, etc. Included in "Urban" are the Montreal Metropolitan Corporation, the Municipality of Metropolitan Toronto and the Metropolitan Corporation of Greater Winnipeg.

¹⁶ Classified by the province as suburban or semi-urban.

Section 4.—Federal and Provincial Royal Commissions

Federal Royal Commissions Established.—Royal Commissions established from May 1, 1964 to Apr. 30, 1965 under Part I of the Federal Inquiries Act are given here in continuation of those previously reported in the Year Books beginning with the 1940 edition, pp. 1108-1110. Any Commission established between Apr. 30, 1965 and the date of going to press will be found in the Register of Official Appointments, Chapter XXVII, Part III.

<i>Nature of Commission</i>	<i>Chief Commissioner</i>	<i>Date Established</i>
To inquire into problems relating to the future of the aircraft overhaul base maintained by TCA at Winnipeg International Airport.	D. A. THOMPSON.....	June 11, 1964
To inquire into circumstances surrounding the crash of a Douglas DC8 aircraft at Ste. Thérèse, Que.	Hon. GEORGE SWAN CHALLIES....	Oct. 8, 1964
To inquire into export marketing problems of the salt fish industry in the Atlantic Provinces.	D. B. FINN.....	Oct. 29, 1964

Reports of Federal Royal Commissions.—Reports of Federal Royal Commissions issued during the period May 1, 1964 to Apr. 30, 1965 were as follows:—

- Royal Commission on Health Services, established June 20, 1961. Vol. 1. Ottawa, 1964. 814 p. \$10. (Cat. No. Z1-1961/3-1). Vol. 2. Ottawa, 1965. 375 p. \$5. (Cat. No. Z1-1961/3-2).
- Royal Commission on Bilingualism and Biculturalism, established July 19, 1963: Preliminary report. Ottawa, 1965. 211 p. \$1 English edition—(Cat. No. Z1-1963/1-3). \$2 bilingual edition—(Cat. No. Z1-1963/1-3B).
- Royal Commission on Banking and Finance, established Oct. 18, 1961. Appendix Vol. Ottawa, 1964. 435 p. \$5. (Cat. No. Z1-1961/2-15A).

Provincial Royal Commissions.—The following provincial Royal Commissions were established during the period May 1, 1964 to Apr. 30, 1965:—

<i>Province and Nature of Commission</i>	<i>Chief Commissioner or Chairman</i>	<i>Date Established</i>
NEWFOUNDLAND		
To inquire into house construction costs in the city of St. John's.	Prof. PHILIP H. WHITE.....	June 5, 1964
To inquire into education in Newfoundland.....	Dr. PHILIP J. WARREN.....	Dec. 11, 1964
To inquire into transportation in Newfoundland....	Hon. PHILIP J. LEWIS.....	Dec. 11, 1964
To inquire into electric energy in Newfoundland....	GEORGE C. ROWE.....	Dec. 11, 1964
To inquire into medical services and hospital facilities in Newfoundland.	Rt. Hon. the Baron BRAIN.....	Feb. 8, 1965
PRINCE EDWARD ISLAND		
To inquire into higher education in Prince Edward Island.	Dr. J. SUTHERLAND BONNELL....	July 9, 1964
QUEBEC		
To inquire into Sunday work in the pulp and paper industry.	His Hon. Judge RICHARD ALLEYN.	Aug. 26, 1964

<i>Province and Nature of Commission</i>	<i>Chief Commissioner or Chairman</i>	<i>Date Established</i>
ONTARIO		
To study and inquire into the laws of Ontario for the purpose of determining how far there may be unjustified encroachment on the personal freedoms, rights and liberties of Canadian citizens and others resident in Ontario by the government or bodies exercising authority under or administering the laws of the province, and to recommend such changes in the laws, procedures and processes as may be necessary and desirable to safeguard such fundamental and basic rights, liberties and freedoms of the individual from infringement by the State or any other body.	The Hon. Chief Justice JAMES CHALMERS McRUER.	May 21, 1964
To inquire into the causes of the recent fluctuations in the prices and shares of Windfall Oils & Mines Ltd. and other mining corporations in relation to the recent mineral discoveries in the Timmins area; activities pertaining to the dealings in shares of such corporations; and activities of the Toronto Stock Exchange and the Ontario Securities Commission in connection therewith.	Hon. Justice ARTHUR KELLY.....	Aug. 13, 1964
To inquire into the affairs of Farmers' Allied Meat Enterprises Co-operative Limited.	Hon. Justice CAMPBELL GRANT....	Mar. 9, 1965
MANITOBA		
To inquire into real property mortgage loan transactions.	G. P. R. TALLIN.....	May 27, 1964
To inquire into Grand Rapids water haulage.....	The Hon. Chief Justice G. E. TRITSCHLER.	Dec. 24, 1964
SASKATCHEWAN		
To inquire into and report on organization and administrative problems or areas which are of concern to all or a number of departments, agencies, boards or commissions of the Government of Saskatchewan.	F. W. JOHNSON.....	July 7, 1964

PART III.—ADMINISTRATIVE FUNCTIONS OF THE FEDERAL GOVERNMENT

Section 1.—Financial Administration*

The financial affairs of the Government of Canada are administered and controlled under the fundamental principles that no tax shall be imposed and no money shall be spent without the authority of Parliament and that expenditures shall be made only for the purposes authorized by Parliament. The most important constitutional provisions relating to Parliament's control of finances are contained in the British North America Act; this Act provides that all taxing and appropriating measures must originate in the House of Commons and all requests for grants must come from the Crown through responsible Ministers, and for such requests the Government is solely responsible. In practice, financial control is exercised through a budgetary system based on the principle that all the financial needs of the Government for each fiscal year be considered at one time so that both the current condition and the prospective condition of the public treasury are clearly in evidence.

Estimates and Appropriations.—In the latter part of the calendar year, at the request of the Minister of Finance, each of the several departments prepares its estimates for the following fiscal year and submits them by a specified date to the Treasury Board.

* Prepared under the direction of H. R. Balls, Comptroller of the Treasury, Department of Finance, Ottawa.

This Board is a Committee of the Queen's Privy Council for Canada and consists of the Minister of Finance as chairman and five other Ministers named by the Governor in Council, with such additional members of the Privy Council as the Governor in Council may nominate to serve as alternates. A senior officer of the Department of Finance acts as secretary to the Board and the necessary staff is provided by that Department. Under the Financial Administration Act, the Board has a statutory duty to advise the Governor in Council on matters relating to finance, estimates, expenditures, financial commitments, establishments, revenues, accounts, terms and conditions of employment of persons in the public service and general administrative policy in the public service.

On receipt, departmental estimates are assembled by officers of the Treasury Board, comparisons are made with the expenditures of previous years and digests of supporting data and other pertinent information are prepared. The Board reviews each departmental submission in the light of probable revenues and of governmental policy generally, usually consulting the appropriate Minister and departmental officials. Expenditure proposals may be rejected or reduced and unresolved differences of opinion may be referred to the Cabinet for decision. When the Board is satisfied with their substance and form, these estimates, known as the Main Estimates, are submitted to the Cabinet and later to the Governor General for approval and are then laid before the House of Commons.

On motion of the Minister of Finance, the estimates are referred for consideration to the Committee of Supply, which is a committee of the whole House. However, the estimates of certain departments may first go to select committees of the House; these, after being reported upon to the House, are referred back to the Committee of Supply. The consideration of the estimates usually extends over a period of several months. Each vote is the subject of a separate resolution and Members of the House may question the Minister on any item but no private member or Minister on his own responsibility can introduce any new expenditure proposal or any amendment to an estimates item that would result in an increased expenditure. When the examination of the individual items has been completed, the estimates are referred to the Committee of Ways and Means, also a committee of the whole House, which is asked to consider a resolution for the introduction of a Bill to appropriate money to meet the requirements as approved in the Committee of Supply. When such resolution is passed, an appropriation Bill is introduced which, when approved by the House of Commons and the Senate, is given Royal Assent and becomes law. Grants in the Appropriation Acts are grants to the Crown and funds cannot be disbursed until supply, voted by Parliament to the Crown, is released by a warrant prepared on an Order of the Governor in Council and signed by the Governor General.

As weeks or months may elapse after the commencement of the fiscal year before the main Appropriation Act is passed, funds are made available for the conduct of government functions by the passage of an interim supply Bill granting one twelfth or one sixth of the total of each item in the estimates, equivalent to one or two months' supply, respectively. Additional interim supply Bills may be introduced if required, awaiting Parliament's detailed consideration of the estimates. In addition, to cover any new and unforeseen requirements that might arise during the year, supplementary estimates are usually introduced after some months of the fiscal year have elapsed, and just prior to the end of the fiscal year further supplementary estimates are laid before the House. These supplementary estimates are dealt with in the same manner as the Main Estimates.

In addition to the expenditure items included in the annual Appropriation Acts, there are a number of items, such as interest on the public debt, family allowances and old age assistance payments, which have been authorized under the provisions of other statutes. Although it is not necessary for Parliament to pass annually on these items, they are included in the Main Estimates for purposes of information. Statutory provision is also made for the expenditure of public money in emergencies where no specific parliamentary appropriation is available. Under the Financial Administration Act, the Governor in Council, upon the report of the Minister of Finance that there is no appropriation for the expenditure and upon the report of the appropriate Minister that the expenditure is urgently required, may order the issuance of a special warrant authorizing disbursement

of the amount required. Such warrants may be issued only when Parliament is not in session and every warrant is published in the *Canada Gazette* within thirty days of issue. The Fire Losses Replacement Account Act also provides for emergency expenditures for the urgent repair or replacement of property destroyed or damaged by fire, where there is not sufficient money available in the appropriation for the Service suffering loss. Such amounts must be charged subsequently to an appropriation or included in the estimates for the department or agency concerned.

In addition, disbursements are made for purposes not reflected in the budgetary accounts but recorded in the Government's statement of assets and liabilities, such as loans to and investments in Crown corporations, loans to international organizations and to national, provincial and municipal governments, and loans to veterans. There are also disbursements in connection with deposit and trust accounts and annuity, insurance and pension accounts which the Government holds or administers, including the old age security fund which is operated as a separate entity. Although these disbursements are excluded from the calculation of the annual budgetary surplus or deficit, they are all subject to appropriation by Parliament either in the annual Appropriation Acts or in other legislation.

The Budget.—Some time after the Main Estimates have been introduced, the Minister of Finance presents his annual Budget Speech in the House of Commons. Budget papers, tabled for the information of Parliament at least one day prior to the presentation of the Budget, include a general review of economic conditions and a preliminary review of the Government's accounts for the fiscal year then ending. The Budget Speech itself reviews the state of the national economy and the financial operations of the Government for the previous fiscal year and gives a forecast of the probable financial requirements for the year ahead, taking into account the Main Estimates and making allowances for supplementary and further supplementary estimates and probable lapsings. At the close of his address, the Minister tables the formal resolutions for changes in the existing tax rates and customs tariff which, in accordance with parliamentary procedure, must precede the introduction of any money Bills. These resolutions give notice of the amendments which the Government intends to ask Parliament to make in the taxation statutes. However, if a change is proposed in a commodity tax, such as a sales tax or excise duty on a particular item, it is usually made effective immediately; the legislation, when passed, is made retroactive to the date of the Speech.

The Budget Speech is delivered in support of a motion that the House go into Committee of Ways and Means, the debate on which usually lasts for several weeks. With the passage of the motion, the way is clear for the consideration of the Budget resolutions and, when these have been approved by the Committee, a report to this effect is made to the House and the tax Bills are introduced and thereafter dealt with in the same manner as all other government financial legislation.

Revenues and Expenditures.—The administrative procedures whereby revenues are collected and expenditures are made are, for the most part, contained in the Financial Administration Act.

With respect to revenues, the basic requirement is that all public money shall be paid into the Consolidated Revenue Fund, which is defined as the aggregate of all public money on deposit to the credit of the Receiver General. The Treasury Board has prescribed detailed regulations governing the receipt and deposit of such money. For the actual custody of public money, use is made of the Bank of Canada and the chartered banks. Balances are allocated to the various chartered banks on the basis of a percentage allocation established by agreement among all the banks and communicated to the Department of Finance by the Canadian Bankers' Association. The daily operating account is maintained with the Bank of Canada and the division of funds between it and the chartered banks takes into account the immediate cash requirements of the Government and consideration of monetary policy. The Minister of Finance may purchase and hold securities of, or guaranteed by, Canada and pay for them out of the Consolidated Revenue Fund or may sell such securities and pay the proceeds into the Fund. Thus, if cash balances in the Fund

are in excess of requirements for the immediate future they may be invested in interest-earning assets. In addition, the Minister of Finance has established a purchase fund to assist in the orderly retirement of the public debt.

The principal agencies exercising control over expenditures are the Treasury Board (previously described) and the Comptroller of the Treasury, who has the status of a deputy head but is an officer of the Department of Finance, with representatives who act as accounting and disbursing officers stationed in all the principal departments.

The Treasury Board exercises detailed central control over the budgets, programs and staffs of departments and over financial and administrative matters generally. Although the most important part of this control function is exercised during the consideration of the estimates, the Board maintains continuous control over certain types of expenditure to ensure that the scale of activities and commitments for the future is held within approved policies, that departments follow uniform, efficient and economical practices, and that the Government is informed of and approves any major development of policy or significant transaction that might give rise to public or parliamentary criticism.

To ensure that the decisions of Parliament, the Government and Ministers in regard to expenditures are enforced, there is a centralized accounting and disbursing system. The Financial Administration Act provides that no payment shall be made out of the Consolidated Revenue Fund without the authority of Parliament and no charge shall be made against an appropriation except upon the requisition of the appropriate Minister or a person authorized by him in writing. These requisitions, and certificates that the work has been performed, the material supplied or the services rendered and that the price charged is reasonable or according to contract, together with such documents as may be required, are presented to the Comptroller of the Treasury. If the charge is a lawful one against the appropriation and does not exceed the amount of the appropriation or reduce it below the amount necessary to meet other commitments, and does not contravene any applicable legislative or executive requirements, the Comptroller will make the payment. However, if he declines to make a payment, disallows an item in an account or refuses to give a certificate, the Minister concerned may report the circumstances to the Treasury Board for decision and the Board may confirm or overrule the action of the Comptroller. The Comptroller may transmit to the Board any requisition with respect to which he desires its direction and the Board may order that payment be made or refused.

At the beginning of each fiscal year each department submits to the Treasury Board, through the Comptroller, a division or allotment of each item included in its estimates. Once approved by the Board, these allotments cannot be varied or amended without the approval of the Board and expenditures charged to appropriations are limited to such allotments. To avoid over-expenditures within a fiscal year, the Comptroller records and controls commitments due to come in course of payment within the year for which Parliament has provided or has been asked to provide appropriations. The Government, through the Treasury Board and the Comptroller, also maintains careful control over commitments made under contract that will fall due in succeeding years, since it must be prepared in future to ask Parliament for appropriations to cover them. Any unexpended amounts in the annual appropriations lapse at the end of the year for which they are granted, but for thirty days subsequent to Mar. 31 payments may be made and charged to the previous year's appropriations for debts incurred prior to the end of that fiscal year.

Under the Financial Administration Act, every payment pursuant to an appropriation is made under the control and direction of the Comptroller by cheque drawn on the account of the Receiver General or by such other instrument as the Treasury Board may direct. In practice, the paid Comptroller's cheques are cleared daily by the chartered banks through the Bank of Canada to the Cheque Adjustment Branch of the Comptroller's Office, and reimbursement is made by means of a cheque drawn on the Receiver General's account with the Bank of Canada.

Public Debt.—In addition to the collection and disbursement of public money for budgetary and non-budgetary purposes, the Government receives and disburses substantial sums in connection with its public debt operations. The Minister of Finance is authorized to borrow money by the issue and sale of securities at such rate of interest and subject to such terms and conditions as the Governor in Council may approve. Although the specific authority of Parliament is required for new borrowings, the Financial Administration Act authorizes the Governor in Council to approve the borrowing of such sums of money as are required for the redemption of maturing or called securities and, to ensure that the Consolidated Revenue Fund will be sufficient to meet lawfully authorized disbursements, he may also approve the temporary borrowing of such sums as are necessary for periods not exceeding six months. The Bank of Canada acts as the fiscal agent of the Government in the management of the public debt.

Accounts and Financial Statements.—Under the Financial Administration Act, accounts are kept to show the revenues of Canada, the expenditures made under and the commitments chargeable against each appropriation, the other payments into and out of the Consolidated Revenue Fund, and such of the assets and direct and contingent liabilities as the Minister of Finance believes are required to give a true and fair view of the financial position of Canada. The statement of assets and liabilities is designed to disclose the amount of the net debt, which is determined by offsetting against the gross liabilities only those assets regarded currently as readily realizable or interest- or revenue-producing. Fixed capital assets, such as government buildings and public works, are charged to budgetary expenditures at the time of acquisition or construction and are shown on the statement of assets and liabilities at a nominal value of \$1.

Annually, on or before Dec. 31 or, if Parliament is not then in session, within fifteen days after the commencement of the ensuing session, the *Public Accounts* is laid before the House of Commons by the Minister of Finance. The *Public Accounts* contains a survey of the financial transactions of the fiscal year, statements of the revenues and expenditures for the year and of the assets and direct and contingent liabilities as at the end of the year, together with such other accounts and information as are necessary to show the financial transactions and financial position of Canada or which are required by law to be reported in the *Public Accounts*. Monthly financial statements are also published in the *Canada Gazette*.

The Auditor General.—The Government's accounts are subject to an independent examination by the Auditor General who is an officer of Parliament. With respect to expenditures, this examination is a post-audit for the purposes of reporting whether the accounts have been faithfully and properly kept and whether the money has been expended for the purposes for which it was appropriated by Parliament and the expenditures have been made as authorized; any audit before payment is the responsibility of the Comptroller of the Treasury. With respect to revenues, the Auditor General is required to ascertain that all public money is fully accounted for and that the rules and procedures applied are sufficient to ensure an effective check on the assessment, collection and proper allocation of the revenue. With respect to public property, he is required to satisfy himself that essential records are maintained and that the rules and procedures applied are sufficient to safeguard and control such property. The Auditor General reports to Parliament the results of his examination, calling attention to any case which he considers should be brought to the notice of the House. He also reports to Ministers, the Treasury Board or the Government any matter which in his opinion calls for attention so that remedial action may be taken promptly.

Public Accounts Committee.—It is the usual practice to refer the *Public Accounts* and the *Auditor General's Report* to the Public Accounts Committee of the House of Commons, which may review them and report its findings and recommendations to the House of Commons.

Section 2.—Departments, Boards, Commissions, etc.*

The following paragraphs indicate the functions of the various departments of government and the special boards and commissions in connection with the work of government.

Although it is not possible, owing to the limitations of space, to enumerate in this Section the details of each service or the divisions or sections of all departments, the main branches are given along with those services that differ in some quality from the larger class of subjects handled by a department. The work of many of these departments and boards is given in detail in later Chapters of this volume. The Index will be useful in locating required information.

Department of Agriculture.—This Department was established in 1867 (SC 1868, c. 53) and undertakes work on all phases of agriculture. Research and experimentation are carried out by the Research Branch; the maintenance of standards and protection of products by the Production and Marketing Branch and the Health of Animals Branch; the Canada Grain Act, as it pertains to the inspection, weighing, storage and transportation of grain, is administered by the Board of Grain Commissioners; land reclamation and development is carried out by the Prairie Farm Rehabilitation Administration; and farm income security and price stability are provided under the Crop Insurance Act, the Prairie Farm Assistance Act and the Agricultural Stabilization Act. The Farm Credit Corporation and the Board of Grain Commissioners report to Parliament through the Minister of Agriculture.

Air Transport Board.—The Air Transport Board was established in 1944 by amendment of the Aeronautics Act. The Board is responsible for the economic regulation of commercial air services in Canada and for advising the Minister in the exercise of his duties and powers under the Act in all matters relating to civil aviation. The regulatory function relates to Canadian air services within Canada and abroad, and to foreign air services operating into and out of Canada. It involves the licensing of all such services and the subsequent regulation of the licensees in respect of their economic operation and the provision of service to the public. The Board reports to Parliament through the Minister of Transport.

Auditor General's Office.—This Office originated in 1878 (SC 1878, c. 7) and currently functions under the Financial Administration Act (RSC 1952, c. 116). The Auditor General is responsible for examining accounts relating to the Consolidated Revenue Fund and to public property, and for reporting annually to the House of Commons the results of his examinations. He also audits the accounts of various Crown corporations and other instrumentalities.

Board of Broadcast Governors.—This Board, established under the provisions of the Broadcasting Act which was assented to on Sept. 6, 1958, is given authority to regulate radio and television broadcasting in Canada. The Board has authority to regulate the establishment and operation of both public and private broadcasting stations and networks of stations. Applications for licences to establish new broadcasting stations, for changes in the facilities of existing stations or for changes in the ownership or in the share structure of licensees are referred to the Board by the Minister of Transport for a recommendation before being dealt with. The Board has three full-time and twelve part-time members and reports to Parliament through the Secretary of State.

Board of Grain Commissioners.—Constituted in 1912 under the Canada Grain Act (RSC 1952, c. 25), the Board of Grain Commissioners for Canada provides general supervision over the physical handling of grain in Canada by licensing elevator operators, inspecting and weighing grain received at and shipped from terminal elevators, and other services. The Board, comprising a Chief Commissioner and two Commissioners, has authority to inquire into any matter relating to the grading and weighing of grain, deductions for dockage or shrinkage, deterioration of any grain during storage or treatment, unfair or discriminatory operation of a grain elevator, etc. The Board publishes its regulations in the *Canada Gazette* and reports to Parliament through the Minister of Agriculture.

Board of Transport Commissioners.—The powers of this Board, which was organized as the Board of Railway Commissioners in 1904, have been extended from time to time until today it has regulatory and judicial functions dealing with almost all aspects of railway activity including location, construction and operation of lines, rates and charges. It is also entrusted with the regulation of other transportation and communication agencies, including express companies, telegraph companies, telephone companies other than those provincially or municipally controlled, international bridges and tunnels and inland shipping. The Board reports to Parliament through the Minister of Transport.

* As at Apr. 30, 1965; any major changes taking place between that date and the time of going to press will be carried in an Appendix to this volume. Also, the accompanying organization chart is brought up to the latest possible date before going to press; see lower right-hand corner.

Bureau of Government Organization.—The Bureau was established by Order in Council dated Feb. 12, 1963, as a branch of the Privy Council Office (and designated as a "Department" for the purposes of the Civil Service Act and the Financial Administration Act), to facilitate the implementation of the recommendations of the Royal Commission on Government Organization. Effective May 15, 1964, the control and supervision of the Bureau was transferred to the Department of Finance. The responsible Minister is the Minister of Finance.

Canadian Government Printing Bureau.—The printing functions formerly provided by the Department of Public Printing and Stationery were transferred by Order in Council (PC 1963—1254) dated Aug. 21, 1963, to the Department of Defence Production. The latter Department, on Apr. 1, 1964, authorized the organization of the Canadian Government Printing Bureau as a distinct function under that Department, to be separated from the former Publications Branch and the Purchasing Stationery and Stores Branch of the Department of Public Printing and Stationery.

The Canadian Government Printing Bureau, under the direction of a General Manager, provides a variety of printing services, such as House of Commons Debates, Votes and Proceedings, Orders of the Day and other parliamentary papers for both Houses of Parliament, and other printing requirements of government departments and agencies. The main plant is located in Hull, Que.; smaller field units are located in the Ottawa area and in other major centres to handle the duplicating requirements of individual government departments.

Canadian Government Specifications Board.—This is an interdepartmental body composed of the Deputy Heads of eight Federal Government departments and agencies. The Board's secretariat constitutes the Specifications and Standards Branch of the Canadian Government Supply Service of the Department of Defence Production. It operates through the medium of committees in which government and industry co-operate on a voluntary basis. The Board prepares specifications and standards in commodity fields and for materials, processes and equipment required by government agencies, and arranges for necessary testing and research. An *Index of Specifications and Standards* is available on request to the CGSB Secretary, Department of Defence Production, Ottawa.

Canadian Pension Commission.—This Commission, established in 1933 by amendments to the Pension Act (RSC 1952, c. 207), replaced the Board of Pension Commissioners, the first organization created to deal solely with war pensions for service in Canada's Armed Forces. The Commission's main function is the administration of the Pension Act under which it adjudicates upon all claims for pension in respect of disability or death arising out of service in Canada's Armed Forces; and Parts I to X inclusive of the Civilian War Pensions and Allowances Act, which provide for the payment of pensions in respect of death or disability arising out of civilian service directly related to the prosecution of World War II. It also adjudicates on claims for pension under various other measures; authorizes and pays monetary grants accompanying certain gallantry awards bestowed on members of the Armed Forces; and administers various trust funds established by private individuals for the benefit of veterans and their dependants. The Commission consists of eight to twelve Commissioners and up to five *ad hoc* Commissioners appointed by the Governor in Council. Its chairman has the rank of a Deputy Head of a department and the Commission reports to Parliament through the Minister of Veterans Affairs.

Chief Electoral Office.—This Office was established in 1920 under the provisions of the Dominion Elections Act, now the Canada Elections Act (RSC 1960, c. 39, and amendments thereto), and is responsible for the conduct of all federal elections as well as the elections of members of the Northwest Territories Council and of the Yukon Territory Council. In addition, it conducts any vote taken under the Canada Temperance Act. The Chief Electoral Officer reports to Parliament through the Secretary of State.

Department of Citizenship and Immigration.—This Department was constituted in December 1949 (RSC 1952, c. 67) and came into existence on Jan. 18, 1950 under the Minister of Citizenship and Immigration. Most departmental work is carried on through four branches. The Canadian Citizenship Branch assists governmental and non-governmental agencies engaged or interested in facilitating the adjustment and integration of newcomers and in making Canadians conscious of their privileges and responsibilities as citizens. The Canadian Citizenship Registration Branch administers the Canadian Citizenship Act and is the custodian of all records under that Act and all Naturalization Acts previously in force. The Immigration Branch administers the Immigration Act and Regulations and is responsible for the selection, examination and movement of immigrants, the exclusion or deportation of undesirables and the settlement or establishment of immigrants in Canada. The activities of the Indian Affairs Branch include management of all Indian affairs. Its organization consists of a headquarters office at Ottawa, a regional supervisory staff, and 89 local agencies in the field.

The Central Mortgage and Housing Corporation reports to Parliament through the Minister of Citizenship and Immigration.

Civil Service Commission.—The Civil Service Commission of Canada dates from the Civil Service Act of 1908. Under this Act the Commission was given the responsibility of applying, wherever possible, the principle of appointment by merit in filling permanent positions within departmental headquarters at Ottawa, termed the "inside service". The Civil Service Act of

1918 extended the competitive system of appointments to cover the outside service and temporary appointments. It also gave the Commission other responsibilities in the field of personnel administration including responsibility for promotion, for classification of positions and for recommending rates of pay.

The Civil Service Act of 1961, which came into force on Apr. 1, 1962, has three main features. First, it preserves the independence of the Civil Service Commission and carries forward and strengthens all the fundamental principles of the merit system. Secondly, it clarifies the role of the Civil Service Commission in those other areas of personnel administration with which it is concerned but which do not bear directly upon the merit system. Thirdly, it confers on staff associations the right to be consulted on matters that have to do with remuneration and conditions of employment.

The Civil Service Commission is responsible only to Parliament and not to the executive government and reports to Parliament through the Secretary of State. It consists of three members, one of whom is chairman. Each member of the Commission is appointed by the Governor in Council for a term of ten years and has the rank and standing of a Deputy Minister. The Commission has a staff of more than 700 persons located in its headquarters at Ottawa and in its field offices at St. John's, Nfld., Halifax, N.S., Moncton and Saint John, N.B., Quebec and Montreal, Que., Ottawa, Toronto and London, Ont., Winnipeg, Man., Regina and Saskatoon, Sask., Edmonton and Calgary, Alta., and Vancouver and Victoria, B.C.

Department of Defence Production.—The Department of Defence Production was established in April 1951 by the Defence Production Act (SC 1951, c. 4—now the Defence Production Act, RSC 1952, c. 62, as amended by SC 1955, c. 52). Its antecedents were the Department of Munitions and Supply established in 1940 for the procurement of military supplies and its successor, in December of 1945, the Department of Reconstruction and Supply. In February 1947, the procurement functions of the Department of Reconstruction and Supply were transferred to the Department of Trade and Commerce and carried out through the Canadian Commercial Corporation. The Defence Production Act provides the Minister with exclusive authority to buy or otherwise acquire defence supplies required by the Department of National Defence. The Act also provides for the mobilization, conservation and co-ordination of Canadian economic and industrial facilities; for incorporation of companies; for stock-piling essential materials; and for the provision of capital assistance.

As the Department has responsibility for encouraging the development and production of defence equipment in Canada, it is also concerned with establishing arrangements with the United States and other NATO and allied countries for bilateral and multilateral collaboration in the fields of defence research, development and production. At the same time it endeavours to increase participation of Canadian industry in the defence production requirements of these countries.

As a result of a Cabinet decision, the Department has been designated as the central purchasing agency for all civil departments and agencies, other than the commercially oriented Crown corporations.

The main operating branches of the Department are: Aircraft, Chemicals, Apparel and Textiles, Electrical and Electronics, Food Products, Machinery, Materials, Mechanical Transport, Shipbuilding and Heavy Equipment, and Wood Products. The Regional Purchasing Branch has 14 regional offices located throughout Canada for local or urgent procurement. Procurement offices are also located at London, England, Washington, U.S.A., Paris, France, and Koblenz, Germany. In addition, the Department contains the International Programs Branch which directs the Departmental defence export activities, including the Canada-U.S. Defence Development and Production Sharing Program and Canadian participation in the NATO Armaments Committee.

The following staff and support branches service both the Departments of Defence Production and Industry—Comptroller's, Financial Adviser's, General Services, Legal, Management Control, Management Services and Personnel. The Emergency Supply Planning Branch is responsible for planning the arrangements necessary to permit a War Supplies Agency to be brought into immediate existence in the event of a nuclear war. Branches that have been formed to carry out the responsibilities of the new integrated Supply Service are: Cataloguing, Quality Assurance, Specifications and Standards, Traffic Management, Warehousing and Distribution and Regional Purchasing. The Canadian Government Printing Bureau is responsible to the Department of Defence Production.

Crown corporations and agencies reporting to Parliament through the Minister of Industry in his capacity as Minister of the Department of Defence Production are: Canadian Arsenals Limited, Canadian Commercial Corporation, Canadian Government Specifications Board, Crown Assets Disposal Corporation, Emergency Measures Organization, and Polymer Corporation Limited.

Dominion Bureau of Statistics.—The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (SC 1918, c. 43). In 1948 this statute, which had been consolidated as the Statistics Act (RSC 1927, c. 190), was repealed and replaced by the Statistics Act (RSC 1952, c. 257); it was amended by SC 1952-53, c. 18, assented to Mar. 31, 1953.

The function of the Dominion Bureau of Statistics is to compile, analyse and publish statistical information relative to the commercial, industrial, financial, social and general condition of the people and to conduct regularly a census of population and agriculture of Canada as required under the Act.

The Bureau is a major publication agency of the Federal Government; its reports cover all aspects of the national economy. The administrative head of the Bureau is the Dominion Statistician who has the rank of a Deputy Head of a department and reports to Parliament through the Minister of Trade and Commerce.

Emergency Measures Organization.—This organization was established in June 1957 for the purpose of co-ordinating civil emergency planning at the federal level. On Sept. 1, 1959, the Federal Government, in revising the assignments in the field of civil emergency planning, gave the Departments of National Defence, National Health and Welfare, and Justice responsibility for certain specific civil defence functions, and the Emergency Measures Organization responsibility for overall co-ordination of all aspects of civil emergency planning, assistance to provincial governments and municipalities, and general liaison with other countries. On July 1, 1963, the Organization was given the further responsibility of directing and administering the Civil Defence College at Arran, Ont., a responsibility previously discharged by the Department of National Health and Welfare. The organization reports to Parliament through the Minister of Industry in his capacity as Minister of Defence Production.

Department of External Affairs.—This Department was established in 1909 by "An Act to create a Department of External Affairs" (RSC 1952, c. 68). Its main function is the protection and advancement of Canadian interests abroad. The Minister responsible for the Department is the Secretary of State for External Affairs. The senior permanent officer (Deputy Minister) of the Department, the Under-Secretary of State for External Affairs, is assisted by a Deputy Under-Secretary and by four Assistant Under-Secretaries and is advised by the officers in charge of the various divisions. The divisional heads are each responsible for a part of the work of the Department and they are assisted by Foreign Service Officers, administrative officers and an administrative staff. Officers serving abroad are formally designated as High Commissioners, Ambassadors, Ministers, Counsellors, First Secretaries, Second Secretaries, Third Secretaries and Attachés at diplomatic posts and Consuls General, Consuls and Vice-Consuls at consular posts. There are 78 diplomatic, consular and other missions maintained abroad by the Department. In 34 additional countries, Canada is represented by non-resident Ambassadors or High Commissioners.

The work of the Department at Ottawa is performed by 25 divisions and three units. The divisions may be grouped into three categories—area, functional and administrative. There are six area divisions—African and Middle Eastern, Commonwealth, European, Far Eastern, Latin American and United States; thirteen functional divisions—Communications, Consular, Defence Liaison (1), Defence Liaison (2), Disarmament, Economic, Historical, Information, Legal, Passport, Press and Liaison, Protocol, and United Nations; and six administrative divisions—Administrative Services, Finance, Personnel Operations, Personnel Services, Registry, and Supplies and Properties. The three units are the Inspection Service, the Organization and Methods Unit and the Administrative Improvement Unit.

The International Joint Commission reports to the Secretary of State for External Affairs of Canada as well as to the Secretary of State of the United States.

Department of Finance.—This Department was created by Act of Parliament in 1869 and now operates under the Financial Administration Act (RSC 1952, c. 116). The Department is responsible for the financial administration of Canada including the raising of money required for the various governmental activities by way of taxation or borrowing. The Comptroller of the Treasury, an officer of the Department, is responsible for all government disbursements. The work of the Department is organized into the following divisions: Tax Policy, Federal-Provincial-Municipal Relations, Social Security and Pensions, Economic Analysis, Government Finance and Government Guaranteed Loans, Tariffs, International Economic Relations, Resources and Development, International Programmes. The Treasury Board Staff is a branch of the Department and the Royal Canadian Mint also is a branch. The Inspector General of Banks, the Tariff Board, the Municipal Development and Loan Board, the Bank of Canada and the Bureau of Government Organization report to Parliament through the Minister of Finance.

Department of Fisheries.—The Department of Fisheries was first organized under a Minister of Fisheries in 1930. Prior to that date the federal fisheries services were maintained by the former Department of Marine and Fisheries, established in 1868. The provinces, under various arrangements, have certain administrative responsibilities in the fisheries but the legislative authority for the regulation of coastal and freshwater fisheries is with the federal Department of Fisheries.

The work of the Department includes: conservation and development of the fisheries through the enforcement of fishing regulations, the operation of fish culture establishments, management and improvement of spawning streams and control of predators; inspection of fish products for quality control and the encouragement of industrial development; promotion of the greatest utilization of fishery products and a proper public understanding of the resource and the industry. The Department administers the Fishermen's Indemnity Plan to assist fishermen in the event of loss or serious damage to their fishing vessels or lobster traps.

Agencies connected with the Department are the Fisheries Prices Support Board and the Fisheries Research Board of Canada. The Department is represented on the following international commissions: Pacific Salmon Fisheries, Pacific Halibut, the Northwest Atlantic Fisheries, North Pacific Fisheries, Whaling, Great Lakes Fishery, and North Pacific Fur Seal.

Fisheries Research Board.—The Fisheries Research Board operates under the Fisheries Research Board Act of 1937 (amended in 1947 and 1952-53). It has been active as a fisheries research body since 1898, first as the Board of Management of the Canadian Marine Biological Station and later (1912) as the Biological Board of Canada.

The Board operates under the Minister of Fisheries and membership consists of a full-time chairman and not more than 18 other members. The majority of Board members are university scientists, and other members are representative of the fishing industry and the Department of Fisheries.

The Board operates five biological stations across Canada, and three technological stations with two technological application units and two oceanographic groups. It serves as the scientific arm of the Department of Fisheries and its principal objective is to increase the scope and value of Canadian fisheries through scientific research.

Department of Forestry.—The Department was established in October 1960 for the purpose of bringing under one Ministry the conduct of comprehensive programs of research relating to forest management, silviculture, protection against fire, insects and disease and the improvement in the standards of wood utilization and development of forest products. The Department also carries out economic studies of the forest resources and on the economic position of the forest industries. Financial assistance is offered to the provinces under agreements authorized by the Minister of Forestry to assist progress toward meeting specific forestry needs. It conducts forest surveys and provides technical advice and assistance to other agencies of the Federal Government responsible for the administration of forest lands and co-operates with international organizations concerned with forestry and in which Canada maintains membership. The Department acts as co-ordinator for the seven-agency Technical Committee for Watershed Research of the Eastern Rockies Forest Conservation Board.

By Order in Council of Mar. 5, 1964, the responsibilities of the Minister of Forestry were expanded to include the powers, duties or functions formerly exercised by the Minister of Agriculture respecting certain rural development programs under the Agricultural Rehabilitation and Development Act (ARDA), the Maritime Marshland Rehabilitation Act, and the administration of the program of freight assistance and grain storage costs on western feed grains.

The ARDA program joins with existing programs of resource management and economic development to provide public assistance to help meet problems of physical, economic and social adjustment in rural areas. It also includes a program of soil and water conservation aimed at increasing the efficient productivity of basic rural resources over the long run. Operational liaison with the four western provinces is the responsibility of the Prairie Farm Rehabilitation Administration (Department of Agriculture) and the Maritime Marshland Rehabilitation Administration (Department of Forestry) carries a similar responsibility for the Atlantic Provinces.

Through a central and developing information program, the Department of Forestry seeks to promote greater public understanding of the value of the forest resources and, in co-operation with the provinces, of the work and purpose of the ARDA program.

Each of the two major elements of the Department—forestry and rural development—is headed by an Assistant Deputy Minister.

Department of Industry.—Under the Department of Industry Act (SC 1963, c. 3), the Minister of Industry is responsible for promoting the establishment, growth, efficiency and improvement of manufacturing industries in Canada through the development and implementation of programs to assist manufacturers to adjust to changing market conditions, to help them develop new lines of production and enter new markets, and to promote greater industrial research and development as well as good design within Canadian industry.

The Department of Industry is also responsible for undertaking research and investigations on an area or regional basis and preparing programs of development for designated areas of high unemployment and slow economic growth. As a part of these programs, various Federal Government incentive measures are administered.

The Department is organized into ten industry branches: Aircraft, Chemicals, Apparel and Textiles, Electrical and Electronics, Food Products, Machinery, Materials, Mechanical Transport, Shipbuilding and Heavy Equipment, and Wood Products (see also Department of Defence Production, p. 120). In addition, the Area Development Agency carries out the work associated with regional programs and the National Design Branch, in co-operation with the National Design Council, undertakes programs to promote and encourage good design in Canadian products.

The Program Advisory Group consists of a small number of officers experienced in economics, commercial policy, industrial research and development. Their function is to advise the Department in these areas and to co-ordinate departmental programs related to them.

Department of Insurance.—The Minister of Finance is responsible for the Department of Insurance which originated in 1875 as a branch of the Department of Finance but was constituted a separate Department in 1910. It is authorized and governed by the Department of Insurance Act (RSC 1952, c. 70). Under the Superintendent of Insurance, who is the Deputy Head, the Department administers the statutes of Canada applicable to: insurance, loan and trust companies incorporated by the Parliament of Canada; provincially incorporated insurance companies registered with the Department; British and foreign insurance companies operating in Canada; small loans companies and money-lenders; co-operative credit societies registered under the Co-operative Credit Associations Act; and civil service insurance.

Under the relevant provincial statutes, the Department examines trust companies incorporated in the Provinces of Manitoba and New Brunswick and loan and trust companies incorporated in the Province of Nova Scotia.

International Joint Commission.—This Commission was established under a Britain-United States treaty signed Jan. 11, 1909 and ratified by Canada in 1911. The Commission, composed of six members (three appointed by the President of the United States and three by the Government of Canada), is governed by five specific Articles of the Boundary Waters Treaty of 1909. The Commission's approval is required for any use, obstruction or diversion of boundary waters affecting the natural level or flow of boundary waters in the other country; and for any works in waters flowing from boundary waters or below the boundary in rivers flowing across the boundary which raise the natural level of waters on the other side of the boundary.

Problems arising along the common frontier are also referred to the Commission by either country for examination and report, such report to contain appropriate conclusions and recommendations. In addition, questions or matters of difference between the two countries may be referred to the Commission for decision, provided both countries consent.

The Commission reports to the Secretary of State for External Affairs of Canada and to the Secretary of State of the United States.

Department of Justice.—This Department, established by SC 1868, c. 39, now operates under authority of the Department of Justice Act (RSC 1952, c. 71). It provides legal services to the Government and various government departments including preparing and settling government legislation, settling instruments issued under the Great Seal of Canada, regulating and conducting litigation for or against the Crown, superintending the acquisition of property and prosecutions under federal legislation other than the Criminal Code, administering federal statutes dealing with legal matters and providing administrative services for the Supreme Court of Canada and the Exchequer Court. The Department also superintends the penitentiaries and administers the prison system of Canada, and administers the provisions of Canadian anti-combine legislation.

The Commissioner of the Royal Canadian Mounted Police operates under the direction of the Minister of Justice who also reports to Parliament for the National Parole Board and the Restrictive Trade Practices Commission.

Department of Labour.—The Department of Labour was established in 1900 by Act of Parliament (SC 1900, c. 24) and now operates under authority of the Department of Labour Act (RSC 1952, c. 72). The Department administers, under the Minister of Labour, legislation dealing with: industrial relations, investigation of disputes, etc.; fair employment practices; the regulation of fair wages and hours of labour; reinstatement in civil employment; female employee equal pay; government annuities; government employee compensation; merchant seamen compensation; technical and vocational training assistance; vocational rehabilitation of disabled persons; hours of work, minimum wages, annual vacations and holidays with pay; and the National Employment Service. It promotes joint consultation in industry through labour-management committees; organizes manpower utilization programs, e.g., farm labour; and operates a Women's Bureau. The Department publishes the *Labour Gazette* and other publications, as well as general information on labour-management, employment, manpower and related subjects.

The National Technical and Vocational Training Advisory Council and the National Advisory Council on the Rehabilitation of Disabled Persons act in an advisory capacity to the Minister of Labour, and the Merchant Seamen Compensation Board reports to the Minister of Labour. The Department is the official liaison agency between the Canadian Government and the International Labour Organization. The Unemployment Insurance Commission reports to Parliament through the Minister of Labour. The Canada Labour Relations Board administers certain provisions of the Industrial Relations and Disputes Investigation Act.

Library of Parliament.—The Library of Parliament as such was established in 1871 (SC 1871, c. 21) although it existed earlier. It currently functions under RSC 1952, c. 166 and SC 1955, c. 35. The Library of Parliament keeps all books, maps and other articles that are in the joint possession of the Senate and the House of Commons. The Parliamentary Librarian is also responsible for the House of Commons Reading Room. Persons entitled to borrow books from the Library of Parliament are the Governor General, Members of the Privy Council, Members of the Senate and the House of Commons, Officers of the two Houses, Justices of the Supreme Court of Canada and the Exchequer Court, and members of the Press Gallery. In addition, books are lent

to other libraries and government agencies and reference service is given to scholars. The Parliamentary Librarian has the rank of a Deputy Head of a department and is responsible for the control and management of the Library under the Speaker of the Senate and the Speaker of the House of Commons assisted by a Joint Committee appointed by the two Houses.

Department of Mines and Technical Surveys.—This Department was created by an Act of Parliament (SC 1949, c. 17) which received Royal Assent on Dec. 10, 1949. Its establishment resulted from the reorganization of certain former departments. A primary function of the Department is to provide technological assistance in the development of Canada's mineral resources through investigations and research in the fields of geology, mineral dressing and metallurgy. The Department establishes the framework of surveys throughout the country that provides control for all surveying and mapping in Canada. It produces the base maps used in the development of Canada's natural resources, conducts all the charting of Canada's coastal and inland waters, and issues official sailing directions and Canadian sea and air navigation charts. To this has been added recently the study of coastal waters and of the country's continental shelf as well as of the deep ocean for defence and resource assessment purposes. The Department is divided into six branches: the Surveys and Mapping Branch, the Marine Sciences Branch, the Geological Survey of Canada, the Mines Branch, the Observatories Branch, and the Geographical Branch. The Mineral Resources Division, a unit of head office, gives its whole attention to matters concerned with the economics of mineral resources development.

The Department administers the Explosives Act which regulates the manufacture, testing, sale, storage and importation of explosives, and the Emergency Gold Mining Assistance Act which provides cost-aid to the Canadian gold mining industry.

Boards and Commissions are: the Canadian Permanent Committee on Geographical Names; the Board of Examiners for Dominion Land Surveyors; the International Boundary Commission; and the Interprovincial Boundary Commissions. The Minister of Mines and Technical Surveys reports to Parliament for the Dominion Coal Board.

Department of National Defence.—The Department of National Defence and the Canadian Forces operate under the National Defence Act (RSC 1952, c. 184). The Canadian Forces are administered by the Minister of National Defence and the Associate Minister of National Defence. As of Aug. 1, 1964, the positions of Chairman, Chiefs of Staff Committee, Chief of the Naval Staff, Chief of the General Staff and Chief of the Air Staff were abolished and their powers vested in a single Chief of the Defence Staff. On that date, Canadian Forces Headquarters replaced the separate Service headquarters and the process of integrating its various functions commenced immediately. This was the first stage in the announced plan to integrate the three Services.

The Defence Research Board, created in 1947 to carry out research relating to national defence and to advise the Minister on all relevant matters of a scientific or technical nature, functions under the National Defence Act. The Crown corporation, Defence Construction (1951) Limited, reports to Parliament through the Minister of National Defence.

National Energy Board.—This Board was established under the National Energy Board Act, 1959 for the broad purpose of assuring the best use of energy resources in Canada. The Board, composed of five members, is responsible for the regulation of the construction and operation of the oil and gas pipelines that are under the jurisdiction of the Parliament of Canada, the tolls charged for transmission by oil and gas pipelines, the export and import of gas and the export of electric power, and the construction of the lines over which such power is transmitted. The Board is also required to study and keep under review all matters relating to energy under the jurisdiction of the Parliament of Canada and to recommend such measures as it considers necessary and advisable on the subject. The Board reports to Parliament through the Minister of Trade and Commerce.

National Film Board.—The National Film Board, established in 1939, operates under the National Film Act (RSC 1952, c. 185) which provides for a Board of Governors of nine members—a Government Film Commissioner, appointed by the Governor in Council, who is Chairman of the Board, three members from the public service of Canada and five members from outside the public service. The Board reports to Parliament through the Secretary of State. The Board is responsible for advising the Governor in Council on film activities and is authorized to produce and distribute films in the national interest and, in particular, films 'designed to interpret Canada to Canadians and to other nations'.

Department of National Health and Welfare.—This Department was established in October 1944 under authority of the Department of National Health and Welfare Act (RSC 1952, c. 74). It was originally formed as the Department of Health in 1919 and later became part of the Department of Pensions and National Health. That Department was replaced in 1944 by the Department of National Health and Welfare and the Department of Veterans Affairs.

The Department, headed by the Minister of National Health and Welfare, is composed of three branches—Administration, Health and Welfare—and is administered by two Deputy Ministers.

The Department has charge of all matters relating to the promotion or preservation of the health, social security and social welfare of the people of Canada over which the Federal Parliament has jurisdiction. It administers the Acts listed in Sect. 4, p. 140, and is also responsible for: the administration of the National Health Program under which grants are made available to the provinces for the development and extension of health services; the federal aspects of emergency health and welfare services; health and safety in the peaceful uses of atomic energy and other sources of radiation affecting the population; the provision of health, medical and hospital services to Indians and Eskimos and to other elements of the population in the Yukon and Northwest Territories; the provision of assistance and consultative services to the provinces upon request on blindness control, child and maternal health, mental health, dental health, nursing, medical rehabilitation, nutrition and hospital design; the inspection and medical care of immigrants and seamen and the administration of marine hospitals; the supervision of public health facilities on railway, water and other forms of transportation; the enforcement of regulations of the International Joint Commission relating to public health; the promotion and conservation of the health of civil servants and other government employees; the collection, publication and distribution, subject to the provisions of the Statistics Act, of information relating to public health, improved sanitation and social and industrial conditions affecting the health of Canadians. It co-ordinates and assists international welfare activities in which Canada is engaged and administers a system of grants to the provinces for professional welfare training, welfare research and general welfare services.

National Library.—The National Library came formally into existence on Jan. 1, 1953, with the proclamation of the National Library Act (RSC 1952, c. 330). It publishes *Canadiana*, a monthly catalogue of new publications relating to Canada, with an annual cumulation. The Library also publishes other bibliographies. Its Reference Division maintains the *National Union Catalogue*, which embodies the author catalogues of the major libraries in the ten provinces and is thus a key to the book collections of the whole country. Its book collection is growing steadily and at the end of 1964 consisted of over 250,000 volumes. The National Librarian reports to Parliament through the Secretary of State.

National Parole Board.—The establishment of the National Parole Board, which was formed in January 1959, is authorized by the Parole Act (SC 1958, c. 38) by which it is given absolute jurisdiction over all matters of parole. It is composed of a chairman and three members appointed by Order in Council for a ten-year period. The Board reports to Parliament through the Minister of Justice.

Department of National Revenue.—From Confederation until May 1918, customs and inland revenue Acts were administered by separate departments; after that date they were amalgamated under one Minister as the Department of Customs and Inland Revenue. In 1921 the name was changed to the Department of Customs and Excise. In April 1924 collection of income taxes was placed under the Minister of Customs and Excise and, under the Department of National Revenue Act, 1927, the Department became known as the Department of National Revenue.

The Customs and Excise Division of the Department is responsible for the assessment and collection of customs and excise duties as well as of sales and excise taxes. The Taxation Division is responsible for the assessment and collection of income taxes, gift tax, old age security tax, Part I of the Canada pension plan, and estate taxes for Canada and all provinces, except Quebec, through its 29 district taxation offices and its Taxation Data Centre.

The Minister of National Revenue is responsible to Parliament for the Tax Appeal Board.

Department of Northern Affairs and National Resources.—The Department of Northern Affairs and National Resources was established in December 1953, superseding the Department of Resources and Development. In addition to the Financial and Management Services the Department is divided into four branches: the Natural and Historic Resources Branch, which administers the National Parks and National Historic Parks of Canada, National Historic Sites, and wildlife matters coming within the jurisdiction of the Federal Government; the Water Resources Branch, which is responsible for the investigation of water power resources, for the administration of federal assistance to the provinces under the Canada Water Conservation Assistance Act and for federal interest in certain joint federal-provincial construction projects; the Northern Administration Branch, which is responsible for the administration of various federal Acts, territorial ordinances and regulations pertaining to the government of the Northwest Territories, for the conduct of certain business arising from the general administration of the Yukon Territory, for the administration of natural resources in those Territories, and for Eskimo affairs; and the Resources Development Branch, which is responsible for the national resources areas of the Department's work as well as for certain other lands and mineral rights vested in the Crown in the right of Canada.

The Minister of Northern Affairs and National Resources is also responsible to Parliament for the Northern Canada Power Commission and the National Battlefields Commission. The Historic Sites and Monuments Board of Canada, an honorary body of recognized historians representing the various provinces, and the Advisory Committees on Northern Development and Water Use Policy, act in an advisory capacity to the Minister in their respective fields. The Deputy Minister is Chairman of the Northern Canada Power Commission.

Office of the Representation Commissioner.—This Office was established in 1963 under the provisions of the Representation Commissioner Act (SC 1963, c. 40) and is responsible for preparing maps showing the distribution of population in each province and setting out alternative proposals respecting the boundaries of electoral districts in each province. In addition, it is required to make a review and study methods of registration of electors and absentee voting used in elections of other countries; it reports to Parliament through the Secretary of State.

Post Office Department.—Administration and operation of the Canada Post Office, by virtue of the Post Office Act (RSC 1952, c. 212) and under the Postmaster General, includes all phases of postal activity, personnel, mail handling, transportation of mails by land, water, rail and air and the direction and control of financial services including the operation of money order and savings bank business.

Privy Council Office.—For administrative purposes, the Privy Council Office is regarded as a Department of Government under the Prime Minister. The Clerk of the Privy Council, under whose direction its functions are carried out, is considered as a Deputy Head and takes precedence among the chief officers of the Public Service. The authority of the Privy Council Office is to be found in Sects. 11 and 130 of the British North America Act, 1867, which constituted a Council to aid and advise in the government of Canada to be styled the Queen's Privy Council for Canada. In 1940, upon the wartime development of cabinet committees and the consequent need for orderly secretarial procedures such as agenda, explanatory memoranda and minutes, the Principal Secretary in the Prime Minister's Office was designated Clerk of the Privy Council and First Secretary to the Cabinet. Since 1946, the Privy Council Office has been further reorganized, developed and enlarged and certain administrative functions of the Privy Council Office and the Prime Minister's Office have been closely integrated in the interests of efficiency and economy.

The organization of the Privy Council Office at present consists primarily of the Privy Council Section concerned with the examination of submissions to the Governor in Council, preparation of draft orders and regulations, circulation and filing of approved orders, and the duties of editing, registering and publishing the federal statutory regulations in Part II of the *Canada Gazette*; the Cabinet Section dealing with secretarial work for the Cabinet and for Cabinet committees and interdepartmental committees, such as the preparation and circulation of agenda and necessary documents to Ministers and recording and circulating decisions, liaison with departments and agencies of government, and the preparation of material for the Prime Minister; the Scientific Secretariat; the Special Planning Secretariat; and the Office of the Prime Minister organized as a Secretariat with officers responsible for general secretarial duties, the drafting of letters, the arrangement of appointments to interview the Prime Minister or for his public appearances or for the release of his statements on matters of public interest, and assisting the Prime Minister in his parliamentary duties.

Public Archives.—The Public Archives was founded in 1872 and is administered under the Public Archives Act (RSC 1952, c. 222) by the Dominion Archivist who has the rank of a Deputy Minister and reports to Parliament through the Secretary of State. Its purpose is to assemble and make available to the public a comprehensive collection of historical source material relating to the history of Canada. Major emphasis is placed on official records of the Government and the personal papers of political leaders and other prominent figures. These are supplemented by copies of many records in the British and French archives that relate to Canada, a fine map collection, a historical library, and many prints, paintings and photographs. The Archives operates a large Records Centre which provides accommodation for departmental records that are seldom used and also serves as a sorting centre, preserving papers of long-term interest from obsolete files and marking useless material for destruction. The Government's Central Microfilm Unit is housed in the Records Centre.

Under the terms of the Laurier House Act (RSC 1952, c. 163) the Public Archives is responsible for the administration of Laurier House as a museum and study centre.

Department of Public Works.—The Department was constituted in 1867 and operates under the legislative authority of the Public Works Act and other Acts of Parliament. It is responsible for the management and direction of the public works of Canada and, except as specifically provided in other Acts, attends to the construction and maintenance of public buildings, wharves, piers, roads and bridges and the undertaking of dredging and navigable waters protection work. Federal Government interest in the Trans-Canada Highway and the Northwest Highway System is also handled by the Department. The Department maintains district offices at key points across the country. The Branches and Divisions of the Department are: Harbours and Rivers Engineering, Building Construction, Development Engineering, Property and Building Management, Administrative Services, Economic Studies, Financial Services, Fire Prevention, Information Services, Legal Services and Personnel.

The Minister of Public Works is also responsible to Parliament for the National Capital Commission.

Royal Canadian Mounted Police.—The Royal Canadian Mounted Police, a civil force maintained by the Federal Government, was organized in 1873 as the North West Mounted Police. It now operates under the Royal Canadian Mounted Police Act, 1959 and is responsible for enforcing

federal laws throughout Canada. By agreement with certain provincial governments, it is also responsible for enforcing provincial laws within those provinces and for policing many district municipalities, cities and towns. The Force is controlled and administered by the Minister of Justice.

Department of the Secretary of State.—The Secretary of State and Registrar General of Canada is the official medium of communication with the Throne through the Governor General, and is the custodian of the Great Seal of Canada and of the Privy Seal of the Governor General. He is responsible for the preparation and tabling of returns in Parliament. He is also the Custodian of Enemy Property.

The Department administers affairs relating to patents of invention, trade marks, industrial designs, timber marking, copyright, companies, boards of trade, the registration of trade unions, public officers, public documents, governmental and parliamentary translations, and the National Museum.

The Secretary of State has certain responsibilities with respect to civilian decorations, precedence and ceremonial. The Committee on the use of Parliament Hill, the Canadian Centre for the Performing Arts, the National Library and the Public Archives falls within his purview. He is the Minister responsible for the Centennial Commission and the office of the Queen's Printer (Publisher) and is the spokesman in Cabinet and Parliament for the Board of Broadcast Governors, the Canada Council, the Canadian Broadcasting Corporation, the Chief Electoral Officer, the Civil Service Commission, the Economic Council of Canada, the National Film Board, the National Gallery, the National Library, the Public Archives and the Representation Commissioner.

Tariff Board.—Constituted in 1931, the Board derives its duties and powers from three statutes: the Tariff Board Act (RSC 1952, c. 261, as amended); the Customs Act (RSC 1952, c. 58, as amended); and the Excise Tax Act (RSC 1952, c. 100, as amended).

Under the Tariff Board Act, the Board makes inquiry into and reports upon any matter in relation to goods that, if brought into Canada, are subject to or exempt from duties of customs or excise taxes. Reports of the Board are tabled in Parliament by the Minister of Finance. It is also the duty of the Board to hold an inquiry under Sect. 14 of the Customs Tariff and to inquire into any other matter in relation to the trade and commerce of Canada that the Governor in Council sees fit to refer to the Board for inquiry and report.

Under the provisions of the Customs Act and the Excise Tax Act, the Tariff Board acts as a court to hear appeals from rulings of the Department of National Revenue, Customs and Excise Division, in respect of excise taxes, tariff classification, value for duty, and drawback of customs duties. Declarations of the Board on appeals on questions of fact are final and conclusive but the Acts contain provisions for appeal on questions of law to the Exchequer Court of Canada.

Tax Appeal Board.—The Tax Appeal Board (created in 1946 as the Income Tax Appeal Board) now operates under the Income Tax Act (RSC 1952, c. 148 as amended). The Board is declared by statute to be a court of record and has jurisdiction to hear and determine appeals by taxpayers against their assessment under the Income Tax Act and also appeals under the Estate Tax Act. An appeal lies from the Board to the Exchequer Court of Canada and a further appeal from that court to the Supreme Court of Canada. The Board consists of a chairman, an assistant chairman and four other members. Its offices are located at Ottawa and it hears appeals at the principal centres throughout Canada approximately twice a year and at the main centres, such as Montreal and Toronto, six times a year. The Board is under the jurisdiction of the Minister of National Revenue but is independent of the Department of National Revenue.

Department of Trade and Commerce.—The Department of Trade and Commerce has been expanding its services annually since becoming functional through an Order in Council dated Dec. 5, 1892, almost five years after establishment was approved by an Act of Parliament of Jan. 23, 1887. Today the Department has 194 Trade Commissioners on its staff serving at headquarters and at 66 posts abroad, a figure which includes Assistant Trade Commissioners and agricultural, fisheries and timber specialists. Career trade commissioners are known as Minister (Commercial), Commercial Counsellor or Commercial Secretary and hold diplomatic status if they are members of a mission maintained by the Department of External Affairs.

The Department comprises three principal services: Trade Policy governs trade relations; External Trade Promotion is responsible for the Canadian Government Travel Bureau, the Canadian Government Exhibition Commission, the Trade Commissioner Service, Trade Publicity and Trade Fairs and Missions; and Commodities and Industries includes the Commodities, Agriculture and Fisheries, and Trade Services branches.

Boards and commissions, Crown corporations and agencies that report to Parliament through the Minister of Trade and Commerce include the Canadian Wheat Board, the Dominion Bureau of Statistics, Eldorado Aviation Ltd., Eldorado Mining and Refining Co. Ltd., the Export Credits Insurance Corporation, the National Energy Board, Northern Transportation Co. Ltd., the Canadian Corporation for the 1967 World Exhibition, and the Canadian Government Participation, 1967 Exhibition.

Department of Transport.—The Department was created on Nov. 2, 1936 from the former Departments of Marine and of Railways and Canals, and the Civil Aviation Branch of the Department of National Defence (RSC 1952, c. 79).

The work of the Department consists of two main Services—Marine and Air. Marine Service operations include aids to navigation, nautical and pilotage services, marine agencies, secondary canals, steamship inspection, the Canadian Coast Guard, and direct supervision over 300 public harbours; 11 other harbours come under supervision of the Department but are administered by commissions. Air Services cover the operation of the Telecommunications and Electronics, Civil Aviation, and Meteorological Branches. The work of the Telecommunications and Electronics Branch includes the administration of national and international radio laws, regulations and agreements; it is also responsible for the construction, installation, maintenance and operation of aeronautical, marine and meteorological radio-communication stations and of radio and electronics aids to marine and air navigation.

The Minister of Transport is responsible to Parliament for the following boards, commissions and Crown companies: Air Canada, the Air Transport Board, the Board of Transport Commissioners, the Canadian Maritime Commission, the National Harbours Board, the St. Lawrence Seaway Authority, the Canadian Overseas Telecommunication Corporation, the Canadian National Railways, and the Atlantic Development Board.

Treasury Board.—The Treasury Board was first established by Order in Council PC3 of July 2, 1867 and was made statutory in 1869. Its powers and duties are now governed by the Financial Administration Act (RSC 1952, c. 116 as amended). Serving as a committee of the Queen's Privy Council for Canada and consisting of the Minister of Finance as Chairman and five other members of the Privy Council, it deals with all matters relating to finance, revenues, estimates, expenditures and financial commitments, accounts and personnel establishments referred to the Board by the Governor in Council or on which the Board considers it necessary to act under the Financial Administration Act or any other Act. The practice of having a Board of Ministers co-ordinating financial measures and reviewing constantly the Government's spending program is unique.

The administrative staff of the Treasury Board constitutes a main division of the Department of Finance and is directed by an Assistant Deputy Minister of Finance named to be the Secretary of the Treasury Board.

Department of Veterans Affairs.—This Department, established in 1944 (RSC 1952, c. 80), is concerned exclusively with the welfare of veterans and with the dependants of veterans and of those who died on active service. The Department provides treatment services (hospital, medical, dental and prosthetic), welfare services, education assistance, life insurance, and land settlement and home construction assistance. The Veterans' Bureau assists veterans in the preparation and presentation of pension claims.

The Canadian Pension Commission established by the Pension Act (RSC 1952, c. 207), and the War Veterans Allowance Board established by the War Veterans Allowance Act (RSC 1952, c. 340) also report to Parliament through the Minister of Veterans Affairs.

The Department has treatment institutions and facilities in a number of urban centres. It also maintains, in large cities across Canada, administrative offices, which are shared with the Canadian Pension Commission and the War Veterans Allowance Board, and an office in London, England.

War Veterans Allowance Board.—This Board, established under the authority of the War Veterans Allowance Act, 1930 (RSC 1952, c. 340 as amended), is a statutory body responsible to the Minister of Veterans Affairs for the administration of the Act and for the administration of Part XI of the Civilian War Pensions and Allowances Act relating to certain groups of civilians who performed meritorious service in either World War I or II. It consists of three to ten members (three to five permanent, up to three temporary, and up to two additional without pay) appointed by the Governor in Council. Its functions include the responsibility of ensuring that all 19 District Authorities located in various regions throughout Canada interpret the legislation in a fair, reasonable and equitable manner. It is also an appeal body and may consider an appeal of an appellant against the decision of a District Authority.

Section 3.—Crown Corporations

The Crown corporation form of public enterprise is not a new type of organization in Canada but in recent years, as the work of government has become more complex, greater reliance has been placed on it as the appropriate instrument for administering and managing many public services in which business enterprise and public accountability must be combined.

The use of the corporate device to harmonize public responsibility in the development of economic resources and the provision of public services with the pursuit of commercial

and industrial objectives has led to the adoption of many different forms and formulas of management. The most usual practice has been to set up a corporation under the provisions of a special Act of Parliament which defines its purposes and sets forth its powers and responsibilities. However, during World War II the Minister of Munitions and Supply was authorized to procure the incorporation of companies under the federal Companies Act, 1934, or under any provincial Companies Act to which he might delegate any of the powers conferred on him under the Department of Munitions and Supply Act or any Order in Council. Under this legislation about 28 companies were created to serve a wide variety of purposes; most of these companies have since been wound up.

Following the successful experience during the war years in relying on the Companies Act for the establishment of Crown companies, similar incorporating powers were granted by an amendment to the Research Council Act and have been incorporated in the Atomic Energy Control and the Defence Production Acts.

In 1946 the Government Companies Operation Act was passed to regulate the operation of companies formed under the Companies Act. However, it was applicable only to a relatively small number of companies and, in order to establish a more uniform system of financial and budgetary control and of accounting, auditing and reporting for Crown corporations generally, Part VIII of the Financial Administration Act was enacted in 1951 and brought into operation by proclamation on Oct. 1, 1952. Upon its enactment the financial provisions of the Government Companies Operation Act were repealed.

One of the more interesting features of the later legislation is the attempt that has been made to define and classify Crown corporations.* The Act defines a Crown corporation as a corporation that is ultimately accountable, through a Minister, to Parliament for the conduct of its affairs and establishes three classes of corporation—departmental, agency and proprietary.

Departmental Corporations.—A departmental corporation is defined as a Crown corporation that is a servant or agent of Her Majesty in right of Canada and is responsible for administrative, supervisory or regulatory services of a governmental nature. Twelve departmental corporations are listed in Schedule B to the Act:—

Agricultural Stabilization Board (formerly Agricultural Prices Support Board)
Atomic Energy Control Board
Canadian Maritime Commission
Director of Soldier Settlement
The Director, The Veterans' Land Act
Dominion Coal Board
Economic Council of Canada
Fisheries Prices Support Board
Municipal Development and Loan Board
National Gallery of Canada
National Research Council
Unemployment Insurance Commission.

Agency Corporations.—An agency corporation is defined as a Crown corporation that is an agent of Her Majesty in right of Canada and is responsible for the management of trading or service operations on a quasi-commercial basis or for the management of procurement, construction or disposal activities on behalf of Her Majesty in right of

* Not all Crown corporations are subject to the provisions of the Financial Administration Act. For example, the Canadian Wheat Board, the Bank of Canada and its subsidiary the Industrial Development Bank, because of the special nature of their functions, are excluded from operations of the Crown corporations Part of the Act and are governed by their own Acts of incorporation as is also the Eastern Rockies Forest Conservation Board, a joint federal-provincial enterprise and the Canadian Corporation for the 1967 World Exhibition. The Canada Council was set up under the Canada Council Act (assented to Mar. 28, 1957) as a Crown corporation but has been declared not an agency of the Crown and hence is not included in the Schedules to the Financial Administration Act; the same situation applies to the Atlantic Development Board set up under the Atlantic Development Board Act (assented to Dec. 20, 1962).

Canada. The following agency corporations are listed in Schedule C to the Financial Administration Act or have been subsequently added to that Schedule by the Governor in Council:—

- Atomic Energy of Canada Limited
- Canadian Arsenal Limited
- Canadian Commercial Corporation
- Canadian National (West Indies) Steamships Limited
- Canadian Patents and Development Limited
- Centennial Commission
- Crown Assets Disposal Corporation
- Defence Construction (1951) Limited
- National Battlefields Commission
- National Capital Commission (formerly Federal District Commission)
- National Harbours Board
- Northern Canada Power Commission (formerly Northwest Territories Power Commission)
- Park Steamship Company Limited.

Two corporations, Canadian Sugar Stabilization Corporation Limited and Commodity Prices Stabilization Corporation Limited, listed in Schedule C when the Financial Administration Act was proclaimed, have since discontinued operations and surrendered their charters. By an Order in Council of June 15, 1955, the name of the Northwest Territories Power Commission (now Northern Canada Power Commission) was deleted from Schedule D and added to Schedule C, effective Apr. 1, 1954.

Proprietary Corporations.—A proprietary corporation is defined as a Crown corporation that (1) is responsible for the management of lending or financial operations, or for the management of commercial or industrial operations involving the production of or dealing in goods and the supplying of services to the public, and (2) is ordinarily required to conduct its operations without parliamentary appropriations. The following proprietary corporations are listed in Schedule D to the Act or have been subsequently added to that Schedule by the Governor in Council:—

- Air Canada (formerly Trans-Canada Air Lines)
- Canadian Broadcasting Corporation
- Canadian Overseas Telecommunication Corporation
- Central Mortgage and Housing Corporation
- Eldorado Aviation Limited
- Eldorado Mining and Refining Limited
- Export Credits Insurance Corporation
- Farm Credit Corporation (formerly Canadian Farm Loan Board)
- National Railways, as defined in the Canadian National-Canadian Pacific Act, 1933
- Northern Transportation Company Limited
- Polymer Corporation Limited
- St. Lawrence Seaway Authority
- Seaway International Bridge Corporation Limited (formerly Cornwall International Bridge Company Limited), subsidiary to the St. Lawrence Seaway Authority.

Departmental corporations are governed by the provisions of the Financial Administration Act that are applicable to departments generally. Agency and proprietary corporations, however, are subject to the provisions of the Crown corporations Part of the Act although, if there is any inconsistency between the provisions of that Part and those of any other Act applicable to a corporation, the Act provides that the latter prevail. There is provision in the Part for the control and regulation of such matters as corporation budgets and bank accounts, the turning over to the Receiver General of surplus money, limited loans for working-capital purposes, the awarding of contracts and the establishment of reserves, the keeping and auditing of accounts, and the preparation of financial statements and reports and their submission to Parliament through the appropriate Minister.

A further form of control is exercised by Parliament through the power to vote financial assistance. This may take different forms. For some corporations, capital may be provided by parliamentary grants, loans or advances that may subsequently be converted into capital stock or bonds; for others it may be by the issue of capital stock to be subscribed and paid for by the Government; or by the sale of bonds to either the Government or the public. A few corporations have financed all or a portion of their requirements from their own resources or earnings.

Prior to 1952, Crown corporations did not pay corporate income taxes. However, the Income Tax Act was later amended so that, in respect of financial years commencing after Jan. 1, 1952, proprietary Crown corporations pay taxes on income earned in the same manner as any privately owned corporation. One desirable result of this amendment is that the financial statements of these Crown companies are now more comparable with those of private industry, with which in some instances they are in competition, and thus it is easier to assess the relative efficiency of their operations.

The functions of the various Crown corporations are given briefly in the following paragraphs. For a number of them, further details are included in the Chapters dealing with the subjects concerned (see Index).

Agricultural Stabilization Board.—The Board was established in 1958 (SC 1957-58, c. 22) to administer the provisions of the Agricultural Stabilization Act. The Board reports to Parliament through the Minister of Agriculture and routine administrative matters are handled through departmental channels.

Air Canada.—Formerly Trans-Canada Air Lines, the Corporation was incorporated by Act of Parliament in 1937 to provide a publicly owned air transportation service, with powers to carry on its business throughout Canada and outside of Canada. Air Canada now maintains passenger, mail and commodity traffic services over nation-wide routes and also services to the United States, England, Scotland, Ireland, France, Switzerland, West Germany, Austria, Bermuda, the Bahamas, Jamaica, Antigua, Barbados and Trinidad. Air Canada is responsible to Parliament through the Minister of Transport.

Atlantic Development Board.—The Act establishing this Board (SC 1962-63, c. 10) received Royal Assent on Dec. 20, 1962. The Board is composed of a chairman and four other members appointed by Order in Council and reports to Parliament through the Minister of Transport. Its functions are to inquire into and report upon measures and projects for fostering the economic growth and development of the Atlantic region of Canada and to assess and make recommendations with respect to particular projects referred to it by the Minister.

Atomic Energy Control Board.—By Act of Parliament (RSC 1952, c. 11) proclaimed October 1946, the regulation and control of atomic energy in Canada was placed under the Atomic Energy Control Board. The Board reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research (at present the Minister of Industry).

Atomic Energy of Canada Limited.—This Crown company was incorporated in February 1952 under the Atomic Energy Control Act, 1946 (RSC 1952, c. 11) to take over from the National Research Council on Apr. 1, 1952 the operation of the Chalk River project. The main activities of the company are (a) the development of economic nuclear power, (b) scientific research and development in the atomic energy field, (c) the operation of nuclear reactors and (d) the production of radioactive isotopes and associated equipment such as Cobalt-60 beam therapy units for the treatment of cancer. The company reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research (at present the Minister of Industry).

Bank of Canada.—Legislation of 1934 (RSC 1952, c. 13) provided for the establishment of a central bank in Canada, the function of which is to regulate credit and currency, to control and protect the external value of the Canadian dollar and to stabilize the level of production, trade, prices and employment so far as may be possible within the scope of monetary action. The Bank acts as the fiscal agent of the Government of Canada, manages the public debt and has the sole right to issue notes for circulation in Canada. The Bank is managed by a Board of Directors appointed by the Government and composed of a Governor, a Deputy Governor and 12 Directors; the Deputy Minister of Finance is also a member of the Board. The Bank reports to Parliament through the Minister of Finance and is governed by its own Act of incorporation. (See footnote, p. 129.)

The Canada Council.—Established by Order in Council dated Apr. 15, 1957, this corporation of a chairman, a vice-chairman and 19 other members, a director and an associate director

operates under the terms of the Canada Council Act, assented to Mar. 28, 1957. The function of the Council is to encourage the arts, humanities and social sciences in Canada. Its work is financed by a \$50,000,000 University Capital Grants Fund (now nearing depletion) and the earnings from a \$50,000,000 Endowment Fund. In addition, the Canadian Parliament, on Apr. 3, 1965, approved a special appropriation of \$10,000,000 to enable the Council to meet its minimum foreseeable requirements during the next few years in the furtherance of the general purposes set out in Sect. 8 of the Act. In the making, managing and disposing of investments under the Act, the Council has the advice of an Investment Committee of five, including the chairman and another member of the Council. The proceedings of the Council are reported each year to Parliament through the Secretary of State. (See footnote, p. 129.)

Canadian Arsenals Limited.—This company was established under the Companies Act by Letters Patent dated Sept. 20, 1945 and is subject to the Government Companies Operation Act (RSC 1952, c. 133) and certain provisions of the Financial Administration Act (RSC 1952, c. 116). The Company was set up to take over and operate Crown-owned plants and equipment. It manufactures small arms and a wide variety of ammunition and components and has extensive facilities for the filling and assembly of artillery, ammunition, mines, bombs, grenades, rockets and other specialties up to torpedo warheads. Its Divisions, together with the locations of their plants, are as follows: Dominion Arsenal Division (Quebec City and Val Rose, Que.); Small Arms Division (Long Branch, Ont.); Filling Division (St. Paul l'Ermite, Que.). The Company reports to Parliament through the Minister of Industry in his capacity as Minister of Defence Production.

Canadian Broadcasting Corporation.—The new Broadcasting Act, 1958, continues the CBC as a Crown corporation for the purpose of operating a national broadcasting service. It has the authority to maintain and operate broadcasting stations and networks and to originate and secure programs from within and outside Canada. This national radio and television service is financed through annual grants from Parliament and revenues from commercial operations.

The Corporation consists of 11 directors appointed by the Governor in Council and chosen to give representation to the principal geographical divisions of the country. The Corporation reports to Parliament through a Minister of the Crown (at present the Secretary of State). The President and Vice President are full-time executives appointed for a period of seven years; the other nine Directors are appointed for periods of three years and may serve two consecutive terms. The President is the chief executive of the Corporation and, with the Vice President, is responsible for the conduct of the affairs of the Corporation. As the chief executive, the President receives, interprets and applies the policies and directives of the Directors of the Corporation and establishes administrative and operating policies to control the activities of all operating units—English Networks, French Networks, Regional Broadcasting and the International Service—and of corporate staff departments—Programming, Planning, Engineering and Finance.

In practice, attention of the President is primarily directed to the broad fields of corporate policy, long-range planning and financing. He reports on activities to the Directors of the Corporation and the conduct of relations with Parliament, the Board of Broadcast Governors and the public. The Vice President assists the President in his role of chief executive by assuming primary responsibility for the current operations of the Corporation.

The Corporation's Head Office is situated in Ottawa. Headquarters for English Networks is located in Toronto and for French Networks in Montreal and Regional Headquarters are situated in St. John's for Newfoundland, Halifax for the Maritime Provinces, Winnipeg for the Prairie Provinces, and Vancouver for British Columbia. Headquarters for the Northern and Armed Forces Services is in Ottawa and that for the International Service is in Montreal.

Canadian Commercial Corporation.—This Corporation was established on May 1, 1946, by the Canadian Commercial Corporation Act (RSC 1952, c. 35). Its principal purpose is to assist in the development of trade between Canada and other nations by acting on behalf of the Canadian Government as the contracting agency when other countries wish to purchase defence or other supplies and services from Canada on a government-to-government basis. The Corporation may enter into transactions under the provisions of the Act for any department or agency of the Government of Canada.

The Corporation is operated by the Department of Defence Production with staff provided by the Department and reports to Parliament through the Minister of Industry in his capacity as Minister of Defence Production.

Canadian Corporation for the 1967 World Exhibition.—This Corporation was established by Act of Parliament (SC 1962-63, c. 12) to plan, organize, hold and administer the Canadian Universal and International Exhibition, Montreal 1967, to be held on the occasion of the Centenary of Canadian Confederation. The Exhibition is one of the First Category, and Canada is the first country in the Americas to hold such an exhibition under a franchise of the International Bureau of Exhibitions.

The Exhibition, known as EXPO '67, will be held in Montreal Apr. 28 to Oct. 27, 1967, on a site prepared by the City in three main areas grouped around historic St. Helen's Island in the middle of the St. Lawrence River. The theme, "Man and His World", is purported to demonstrate how, through the ages, man has met the challenge of his environment.

The Corporation is headed by a commissioner general and president; a deputy commissioner general and vice president; and a general manager. It reports to Parliament through the Minister of Trade and Commerce. The present address of the Corporation is Place Ville-Marie, Montreal; the telephone number is EXPosition 1967; and the cable address is Montexpro.

Canadian Government Participation, 1967 Exhibition.—This temporary government organization was set up officially on Oct. 24, 1963, following some months of study and preparatory work. It is not a Crown company but is nevertheless independent of Federal Government departments. The Commissioner General has the status of a Deputy Head and reports directly to the Minister of Trade and Commerce. He is entrusted with the planning, construction and operation of buildings and exhibits that will depict Canada, Canadians and Canadian achievements for better comprehension by visitors from all parts of the world to the International Exhibition, EXPO '67, to be held in Montreal Apr. 28 to Oct. 27, 1967.

Canadian Maritime Commission.—This Commission was created in 1947 by the Canadian Maritime Commission Act (RSC 1952, c. 38). It considers and recommends policies and measures necessary for the operation, maintenance, manning and development of a merchant marine and a shipbuilding and ship-repairing industry. The Commission administers the Ship Construction Assistance Regulations established by Order in Council PC 1961-1290 passed Sept. 8, 1961 and the Canadian Vessel Construction Assistance Act (RSC 1952, c. 43). It also administers steamship subsidies voted by Parliament. Other functions include advice to other government departments on their shipbuilding requirements, consultation with the Department of National Revenue in the administration of the laws relating to the coasting trade of Canada and the co-ordination of the overseas movement of men and material for the Department of National Defence. It has responsibility in international matters relating to merchant shipping, such as NATO, IMCO and other international bodies. The Chairman has the status of a Deputy Minister and the Commission reports to Parliament through the Minister of Transport.

Canadian National Railways.—The Canadian National Railway Company was incorporated (SC 1919, c. 13) to operate and manage a national system of railways, including the Canadian Northern Railway System, the Canadian Government Railways and all lines entrusted to it by Order in Council. In 1923 the Grand Trunk Railway Company of Canada was amalgamated with the Canadian National Railway Company and since 1923 a number of railway lines acquired by the Government have been entrusted to the Company for operation and management, including the Newfoundland Railway and steamship services in 1949, the Temiscouata Railway in 1950, and the Hudson Bay Railway and the Northwest Communication System in 1953. The Canadian National Railways Act, 1919 was repealed in 1955 and the Canadian National Railways Act (SC 1955, c. 29) substituted therefor.

The Canadian National Railway Company is controlled by a chairman and board of directors appointed by the Governor in Council, who report to Parliament through the Minister of Transport.

Canadian Overseas Telecommunication Corporation.—This Crown company was created on Dec. 10, 1949 by Act of Parliament (RSC 1952, c. 42) to acquire for public operation external telecommunication assets in Canada, in keeping with the Commonwealth Telegraph Agreement signed May 11, 1948. This Agreement was designed to bring about the consolidation and strengthening of the radio and cable communication systems of the Commonwealth. The Corporation is responsible to Parliament through the Minister of Transport.

Canadian Patents and Development Limited.—Canadian Patents and Development Limited is a Crown corporation established in 1948, pursuant to authority granted in an amendment to the Research Council Act passed in 1946. The primary purpose of the Company, which is a subsidiary of the National Research Council, is to make available to industry, through licensing arrangements, commercial inventions originating in the NRC laboratories. The Company also handles inventions referred to it from the research establishments of Federal Government departments and agencies, Canadian universities, and provincial research councils. Any profits that the Company may derive from licensing arrangements are used for further research and development. The Company's Board of Directors is composed of representatives of the National Research Council, government departments and agencies, industry and the universities. The Company reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research (at present the Minister of Industry).

Canadian Wheat Board.—The Board was incorporated in 1935 under the Canadian Wheat Board Act to market, in an orderly manner, in the interprovincial and export trade, grain grown in Canada. Its powers include authority to buy, take delivery of, store, transfer, sell, ship or otherwise dispose of grain. Except as directed by the Governor in Council, the Board was not originally authorized to buy grain other than wheat but, since Aug. 1, 1949, it may also buy oats and barley if authorized to do so by Regulation approved by the Governor in Council. Only grain produced in the designated area, which includes Manitoba, Saskatchewan, Alberta and parts of British Columbia and Ontario, is purchased by the Board, which controls the delivery of grain into elevators and railway cars in that area as well as the interprovincial movement and export of wheat, oats and barley generally. The Board is governed by its own Act of incorporation (see footnote, p. 129). It reports to Parliament through the Minister of Trade and Commerce.

Centennial Commission.—The Centennial Commission is a Crown corporation established by Parliament (SC 1960-61, c. 60 as amended) and responsible for the co-ordination and administration of projects relating to the Centennial of Confederation in Canada. It consists of a commissioner, an associate commissioner and not more than 12 directors, each of whom is appointed by the Governor in Council. The Commission is responsible to Parliament through the Secretary of State.

Central Mortgage and Housing Corporation.—This Corporation was incorporated by Act of Parliament (RSC 1952, c. 46) in December 1945 to administer the National Housing Acts. Under the National Housing Act, 1954 (SC 1953-54, c. 23, as amended), the Corporation insures mortgage loans made by approved lenders and makes direct loans for new home-ownership, rental housing and existing housing in urban renewal areas; guarantees home improvement loans made by banks; undertakes subsidized rental housing projects and land assembly developments under federal-provincial arrangements; offers loans and subsidies for public housing projects; makes loans for land assembly projects to be used for public housing; makes loans to limited-dividend and non-profit housing companies for low-rental housing projects; makes loans for university housing projects and to provinces and municipalities for sewage treatment projects designed to eliminate water and soil pollution; makes contributions and loans to provinces and municipalities for urban renewal operations; conducts housing research; encourages urban planning and owns and manages rental housing units including those built for war workers and veterans. The Corporation arranges for and supervises construction of housing projects on behalf of the Department of National Defence and other government departments and agencies. The Corporation is responsible to Parliament through the Minister of Citizenship and Immigration.

Crown Assets Disposal Corporation.—This Corporation is established under the Surplus Crown Assets Act (RSC 1952, c. 260) and is subject to the Financial Administration Act (RSC 1952, c. 116). In June 1944, War Assets Corporation was established by statute to replace War Assets Corporation Limited which had been incorporated in 1943. In 1949 the name of War Assets Corporation was changed to Crown Assets Disposal Corporation. The Corporation's function is to dispose of surplus Crown assets. It is responsible to Parliament through the Minister of Industry in his capacity as Minister of Defence Production.

Defence Construction (1951) Limited.—Defence Construction Limited began its operations in November 1950 as a Crown agency responsible for awarding and supervising defence construction projects. On July 12, 1951, under authority of the Defence Production Act, the present company was established under the name of Defence Construction (1951) Limited and took over the responsibilities of the former agency. From inception until Apr. 1, 1951 the company reported to the Minister of Trade and Commerce, from which date it reported to the Minister of Defence Production until the Minister of Industry was given the powers of the Minister of Defence Production on July 22, 1963. On Apr. 22, 1965, the control and supervision of the company was transferred to the Minister of National Defence.

The company's prime responsibility is the construction of defence projects, including the calling and review of all tenders and subsequent contract awards, the supervision of actual construction work in the field, and the administration of all projects from the Ottawa Head Office. More specifically, however, the company's operations cover five distinct spheres: defence projects in Canada for the Department of National Defence; all defence projects in France for the Department of National Defence under the North Atlantic Treaty Organization agreement; maintenance and repair contracts at Department of National Defence sites throughout Canada; defence construction for the U.S. Government in Canada; and advice and assistance in construction aspects of certain projects such as the Canadian Corporation for the 1967 World Exhibition.

Director of Soldier Settlement and Director of the Veterans' Land Act.—The Director of Soldier Settlement (under the Act of 1919) is also the Director of the Veterans' Land Act, and in each capacity is legally a corporation sole. For administrative purposes, however, the programs carried on under both Acts constitute integral parts of the services provided by the Department of Veterans Affairs.

Dominion Coal Board.—The Board, established as a department in 1947 by the Dominion Coal Board Act (RSC 1952, c. 86), has the responsibility of studying and recommending to the Government policies concerning the production, import, distribution and use of coal. The Chairman has the status of a Deputy Minister and the Board reports to Parliament through the Minister of Mines and Technical Surveys. The Board administers transportation and other subventions relating to coal and also administers loans authorized under the Coal Production Assistance Act (RSC 1952, c. 173, as amended).

Eastern Rockies Forest Conservation Board.—The Board was appointed in 1947 under the Eastern Rocky Mountain Forest Conservation Act which authorized an agreement between the Government of Canada and the Province of Alberta relating to the protection and conservation of the forests of that portion of the eastern slope of the Rocky Mountains which gives rise to the

major tributaries of the Saskatchewan River. The function of the Board is to determine the policy necessary to obtain the greatest possible flow of water in the Saskatchewan River system. The planning of programs of forest use and conservation is a joint duty of the Board and the provincial Forest Service; the administration of the conservation area is a function of the province. In April 1962, a Technical Co-ordinating Committee for Watershed Research was established to undertake study of the related needs defined by the Board. The Committee's programs, undertaken by seven co-operating agencies of the Federal and Alberta Governments, are co-ordinated by the federal Department of Forestry.

Funds for capital expenditures during the first seven years of the agreement were provided by the Federal Government with maintenance expenditures being paid by the Province of Alberta. In 1955 the province undertook the responsibility of financing both capital improvements and maintenance work. Currently, one member of the three-man Board is appointed by the Federal Government and the province has the right to appoint two members. The choice of one of the three members as Board chairman is vested in the province. The Board reports to Parliament through the Minister of Forestry. (See footnote, p. 129.)

Economic Council of Canada.—This Corporation, established under legislation passed on Aug. 2, 1963 (SC 1963, c. 11), consists of a full-time chairman and two full-time directors appointed for a term not to exceed seven years and not more than 25 additional members to serve part-time and without remuneration. The Council is to be as representative as possible of labour, agriculture and primary industries, secondary industry and commerce, and the general public. Its functions are to advise and recommend measures that will achieve in Canada the highest possible levels of employment and efficient production so that the country may enjoy a high and consistent rate of economic growth and that all Canadians may share in rising living standards; to carry on the duties of the former National Productivity Council which were to promote and expedite continuing improvement in productive efficiency in the various aspects of Canadian economic activity; and to publish an annual review of medium- and long-term economic prospects and problems. The Council reports to Parliament through the Secretary of State.

Eldorado Aviation Limited.—This company was incorporated Apr. 23, 1953 to carry air traffic, both passenger and freight, for Eldorado Mining and Refining Limited and its wholly owned subsidiary, Northern Transportation Company Limited. It reports to Parliament through the Minister of Trade and Commerce.

Eldorado Mining and Refining Limited.—Set up in 1944 under the name of Eldorado Mining and Refining (1944) Limited (the date was omitted from the name in June 1952), the company's business is the mining and refining of uranium and the production of nuclear fuels in Canada. The company has also entered into contracts for the purchase of uranium concentrates from private producers in Canada. It reports to Parliament through the Minister of Trade and Commerce.

Export Credits Insurance Corporation.—This Corporation commenced operations in 1945 under the Export Credits Insurance Act, 1944 (RSC 1952, c. 105, as amended) and is administered by a Board of Directors (including the Deputy Minister of Trade and Commerce and the Deputy Minister of Finance) with the advice of an Advisory Council. Its function is to insure Canadian exporters against non-payment by foreign buyers arising out of credit and political risks involved in foreign trade. The Corporation is also authorized to provide financing in respect of an export transaction involving extended credit terms. It reports to Parliament through the Minister of Trade and Commerce.

Farm Credit Corporation.—This Corporation was established on Oct. 5, 1959 (SC 1959, c. 43) for the purpose of providing for the extension of long-term mortgage credit to farmers. The Corporation also administers the Farm Machinery Syndicate Credit Act and is responsible to Parliament through the Minister of Agriculture.

Fisheries Prices Support Board.—The Board was set up in July 1947 (RSC 1952, c. 120) to recommend to the Government price support measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of a chairman, who is a senior officer of the Department of Fisheries, and five members chosen from private and co-operative firms in the industry. The Board has authority to buy fishery products and to sell or otherwise dispose of them or to pay producers the difference between a price prescribed by the Board and the average price the product actually commands.

Industrial Development Bank.—The Bank, a subsidiary of the Bank of Canada, was incorporated in 1944 to provide loans to industrial enterprises where financing is not available through recognized lending organizations. (See footnote, p. 129.)

Municipal Development and Loan Board.—The Act establishing this Board (SC 1963, c. 13) received Royal Assent on Aug. 2, 1963. The Board comprises a chairman and four other

members, appointed by the Governor in Council, and reports to Parliament through the Minister of Finance. The Board makes loans to municipalities to assist in the construction of additional municipal capital projects, providing increased employment. In four provinces, by agreement, the Board makes these loans to the province, which makes similar loans to its municipalities.

National Battlefields Commission.—This Commission was established by Act of Parliament in 1908 to preserve the historic battlefields at Quebec City. The Commission is composed of nine members, seven appointed by the Federal Government and one each by the Provinces of Ontario and Quebec. The Commission is supported by annual appropriations of the Federal Government and is responsible to Parliament through the Minister of Northern Affairs and National Resources.

National Capital Commission.—This Commission is a Crown agency created by the National Capital Act (SC 1958, c. 37), proclaimed Feb. 6, 1959. It is the lineal descendant of the Federal District Commission. The Commission is served by a full-time paid chairman and comprises a total of 20 members representative of the ten provinces of Canada. There is a staff of seven officials reporting to a general manager, and a work force that fluctuates between 500 and 700, depending on the season.

Co-ordination and development of public lands in the National Capital Region are undertaken by direct planning and construction by the Commission's staff; by co-operation with municipalities; by provision of planning aid or financial assistance in municipal projects; and by advising the Department of Public Works on the siting and appearance of all Federal Government buildings in the 1,800-sq. mile National Capital Region. The Commission reports to Parliament through the Minister of Public Works.

National Gallery of Canada.—The beginnings of the National Gallery of Canada are associated with the founding of the Royal Canadian Academy of Arts in 1880. The Marquis of Lorne, then Governor General, had recommended and assisted the founding of the Academy. One of the three tasks he assigned to that institution was the establishment of a National Gallery at the seat of government. By Act of Parliament in 1913, re-enacted in 1951, the National Gallery was placed under the management of a Board of Trustees appointed by the Governor General in Council and now operates under the National Gallery Act (RSC 1952, c. 186). It is responsible to Parliament through the Secretary of State.

The first charge of the National Gallery is the development, care and display of the national art collections. Its services to the public include a large reference library on the history of art and related subjects; an Exhibition Extension Branch through which travelling exhibitions, lectures and the showing of art films, and guided tours of the Gallery at Ottawa are conducted; the production of art publications and reproductions; and a National Conservation Research Laboratory.

National Harbours Board.—The Board was established by Act of Parliament in 1936. It is responsible for the administration of port facilities at the harbours of St. John's, Nfld.; Halifax, N.S.; Saint John, N.B.; Chicoutimi, Quebec, Trois-Rivières and Montreal, Que.; Vancouver, B.C.; and Churchill, Man.; the Jacques Cartier and Champlain Bridges at Montreal, Que.; and the grain elevators at Prescott and Port Colborne, Ont. The Board reports to Parliament through the Minister of Transport.

National Research Council.—This is an agency of the Canadian Government established in 1916 to promote scientific and industrial research. The Council operates science and engineering laboratories in Ottawa, Halifax and Saskatoon; gives direct financial support to research carried out in Canadian university and industrial laboratories; sponsors Associate Committees co-ordinating research on specific problems of national interest; and develops and maintains the nation's primary physical standards. Other activities include the provision of free technical information to manufacturing concerns; the publication of research journals; and representation of Canada in International Scientific Unions. The Council also has the duty of advising the Committee of the Privy Council on Scientific and Industrial Research on questions of scientific and technological methods affecting the expansion of Canadian industries or the utilization of the country's natural resources. Patentable inventions developed in the Council's laboratories are made available for manufacture through a subsidiary company, Canadian Patents and Development Limited (see p. 133). The National Research Council consists of a president, three vice presidents, and 17 members representing Canadian universities, industry and labour. The Council is incorporated under the Research Council Act (RSC 1952, c. 239, as amended), and reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research (at present the Minister of Industry).

Northern Canada Power Commission.—The Commission was established by Act of Parliament in 1948 to provide electric power to points in the Northwest Territories where a need developed and where power could be supplied on a self-sustaining basis; the Act was amended in 1950 to give authority to the Commission to provide similar services in the Yukon Territory. The name of the Commission, formerly Northwest Territories Power Commission, was changed in 1956. The Commission is composed of a chairman and two members appointed by the Governor in Council. The Commission operates four hydro-electric plants, two of which are located in the Northwest Territories on the Snare River near Yellowknife, and two in the Yukon Territory on the Yukon River at Whitehorse and on the Mayo River near Mayo; a fifth hydro plant under construction on the Taltson River near Fort Smith, N.W.T., is scheduled for completion in 1965. Diesel electric plants are operated at Fort Smith, Fort Simpson, Fort Resolution and Frobisher Bay, N.W.T., and Field, B.C., diesel power and central heating plants at Inuvik and Frobisher Bay, N.W.T., and Moose Factory, Ont., and water supply and sewerage systems at Inuvik and Moose Factory. The Commission also operates, on behalf of the Department of Northern Affairs and National Resources, diesel electric plants at Fort McPherson and Aklavik, N.W.T., heating plants at Fort McPherson, Fort Simpson and Frobisher Bay, N.W.T., and domestic water supply and sewerage systems at Fort McPherson, Fort Simpson and Frobisher Bay.

The Commission reports to Parliament through the Minister of Northern Affairs and National Resources.

Northern Transportation Company Limited.—This Company was incorporated in 1947 under the title of Northern Transportation Company (1947) Limited, the date being omitted from the name in 1952. Previously a company chartered under an Alberta statute, it has been a wholly owned subsidiary of Eldorado Mining and Refining Limited since that Crown company was established and carries out the business of a common carrier in the Mackenzie River watershed. The Company is responsible to Parliament through the Minister of Trade and Commerce.

Park Steamship Company Limited.—After World War II this Company acted as an agent for Crown Assets Disposal Corporation in the sale and delivery to purchasers of government war-built ships. This work is completed but the Company remains available to carry out any appropriate duties. It has no staff of its own, any necessary work being done by the staff of the Canadian Maritime Commission (see p. 133). The Company reports to Parliament through the Minister of Transport.

Polymer Corporation Limited.—This Corporation was established in 1942 by Letters Patent under the Companies Act and is subject to the Government Companies Operation Act (RSC 1952, c. 133) and the Financial Administration Act (RSC 1952, c. 116). It was set up to construct and operate a synthetic rubber plant which now produces a variety of synthetic rubber products and some chemicals. The Corporation's principal plant is located at Sarnia, Ont., with specialty rubber and butyl plants in France and Belgium, respectively. The Corporation is responsible to Parliament through the Minister of Industry in his capacity as Minister of Defence Production.

St. Lawrence Seaway Authority.—The St. Lawrence Seaway Authority was established by Act of Parliament in 1951 (RSC 1952, c. 242) and came into force by proclamation on July 1, 1954. The Authority was incorporated for the purposes of constructing, maintaining and operating all such works as may be necessary to provide and maintain, either wholly in Canada or in conjunction with works undertaken by an appropriate authority in the United States, a deep waterway between the Port of Montreal and Lake Erie. The Authority is composed of a president, a vice president and a member, and reports to Parliament through the Minister of Transport.

Unemployment Insurance Commission.—The Commission was appointed on Sept. 24, 1940 under the provisions of the Unemployment Insurance Act, 1940 (RSC 1952, c. 273). It is composed of three commissioners appointed by the Governor in Council, of whom one is designated chief commissioner. One commissioner, other than the chief commissioner, is appointed after consultation with organizations representative of workers and the other after consultation with organizations representative of employers. The Chief Commissioner is appointed to hold office for a period of ten years and each of the other Commissioners to hold office for a period not exceeding ten years. The Commission is responsible to Parliament through the Minister of Labour.

Section 4.—Acts Administered by Federal Departments*

List of the Principal Acts of Parliament Administered by Departments of the Government of Canada

NOTE.—Copies of individual Acts of Parliament may be obtained from the Queen's Printer, Ottawa, at prices of from 10 cents to \$1.50 per copy, according to number of pages. Where duplications of certain Acts appear in the list, parts of these Acts are administered under the Departments given.

PART IV.—FEDERAL AND PROVINCIAL GOVERNMENT EMPLOYMENT

Federal Government Employment

The Civil Service Commission.—As the central personnel agency of the Federal Government, the Civil Service Commission is the custodian of the merit system in the Civil Service of Canada and is also concerned with many other aspects of personnel administration. The Civil Service Commission was established in 1908 under the provisions of the Civil Service Amendment Act of that year which introduced the principle of selection by order of merit for positions in Ottawa. Prior to that, a Board of Examiners (established in 1882) held qualifying examinations for appointment to the service but it did not have the power to appoint. In 1918, the Civil Service Amendment Act was superseded by a Civil Service Act which had the effect, among other things, of bringing positions outside of Ottawa, as well as those at headquarters, under the jurisdiction of the Act and consequently the Commission. This Act served Canada and the civil service well for over four decades until with the passage of time it, too, was in need of substantial amendment. This was accomplished through a new Civil Service Act which received Royal Assent in September 1961 and which came into effect on Apr. 1, 1962.

The new Act applies to about 138,000 employees in all the departments and certain agencies of government and this constitutes the 'civil service' within the legal meaning of that term. The 'public service' is defined as those departments and agencies listed in Schedule A of the Public Service Superannuation Act which embrace about 190,000 employees including the 138,000 under the Civil Service Act and Schedule A of the Financial Administration Act. This definition of public service does not include certain Crown corporations—for example, the Canadian Broadcasting Corporation, the Central Mortgage and Housing Corporation, the Canadian National Railways and Air Canada. Agencies outside the civil service make their own arrangements, in accordance with various statutes, for the selection and employment of staff.

Recruitment.—The recruitment of civil servants under the Civil Service Act is conducted by means of open competitive examinations through which every citizen has the opportunity to compete for positions in the service of his country. Examinations are held periodically as staff requirements of the civil service dictate. Ordinarily, any Canadian citizen may apply for headquarters positions at Ottawa but applicants for local positions must normally be residents of the locality in which the vacancy occurs. Competitive examinations are announced through the press and through posters displayed on the public notice boards of the larger post offices, offices of the National Employment Service, offices of the Civil Service Commission and elsewhere. The examinations may be written, oral, a demonstration of skill, or any combination of these.

The names of persons successful in civil service examinations, arranged in order of rank, are recorded on eligible lists. Examination results are formally announced by publication in the *Canada Gazette* and each candidate—successful or unsuccessful—is advised of his standing. Appointments are made as required from the eligible lists which usually remain valid for one year.

The rank of the various successful candidates on eligible lists is influenced by the veterans' preference. The preference is limited largely, in accordance with its definition by law, to members of the Armed Forces who have served overseas in World Wars I or II or in the Korean theatre of operations. The highest order of preference is the disability preference accorded to pensioners of the Armed Forces.

The operations of the Civil Service Commission are decentralized to a considerable degree and the Commission now has ten district offices and six sub-offices across the country. These offices have a significant measure of autonomy enabling them to give quick and efficient service to the field agencies of departments which comprise almost three quarters of the civil service.

Each year the Civil Service Commission conducts about 10,000 competitions, receives about 250,000 applications and makes about 23,000 appointments, mainly to offset the turnover occasioned by deaths, retirements, resignations and the other changes. One feature of its recruiting program is the annual selection of 600 or more university graduates. There are some 10,000 university graduates in the civil service and, of course, many more in agencies and corporations not under the Civil Service Act.

Promotion.—It is a prime feature of the Civil Service Act to create a career service. The result is that promotion, like entrance, is based on merit and a sound promotion system is in operation. Promotion competitions are of two kinds, inter-departmental and departmental. The former are open to employees of all departments and agencies and are conducted by the Civil Service Commission. The latter, the departmental competitions, are restricted to employees of one department or a portion of a department and are conducted by the departments themselves subject to the provisions of the Act and its Regulations. The Commission maintains liaison with departments to ensure this and to advise departments on administration in this area. It is also provided in the Act that persons employed in the public service outside the civil service, and members of the Armed Forces and the Royal Canadian Mounted Police, may also be considered in promotion competitions where it is thought necessary to do so to attract persons with a high level of skill or ability to positions in the civil service. Each year approximately 6,000 promotion competitions are conducted and about 20,000 employees are promoted, including 5,500 reclassifications. For those employees who feel that their qualifications have not been properly assessed, appeals are conducted under the jurisdiction of the Commission.

Position Classification.—Provision is made in the Civil Service Act for the classifying of positions in the civil service. Positions with like duties and responsibilities are classified alike and remunerated equally; each has a title, a set of tasks or duties which are proper to it in the organization in which it occurs and, arising out of these duties, a set of qualifications appropriate for their performance. Positions with duties of a similar kind are grouped together under a common title to form a class and grades within the class reflect the level of responsibility. There are some 1,500 classes and grades in the civil service and the Commission is constantly reviewing them to ensure that the specifications are accurate. Position classification is a mainspring in the Commission's primary function of recruitment, involving as it does the fixing of standards of qualification for each class of position.

Salary Determination.—It is also a responsibility of the Civil Service Commission to recommend to the Governor in Council rates of pay for each class and grade in the civil service. In order that its recommendations may be soundly based, the Commission has established a Pay Research Bureau which provides objective information on compensation and working conditions for various occupations in government, business and industry. These data are studied in relation to comparable classes in the civil service and in combination with other relevant factors—such as the need to recruit and retain sufficient staff,

and in the light of the relationship of one class to another—and after this process is complete a recommendation is submitted to the Governor in Council for consideration. The Governor in Council also fixes the salaries for those employees who are not under the Civil Service Act.

Organization and Methods.—In recent years there has been an increasing awareness of the extent to which economical administration depends on the adoption of modern management techniques and devices. To meet this need the Commission has created a Management Analysis Division and an Organization Division to study problems of management in collaboration with officials directly responsible for major areas of administration. These Divisions afford practical assistance to departments and other agencies of the Government through the systematic examination of structures, operations, procedures and work methods. Their facilities are offered free of charge to all departments.

Staff Training.—In 1947 the Commission set up a Staff Development and Training Division to promote and guide a systematic service-wide training scheme. The training scheme sponsored by the Commission is a joint venture undertaken in co-operation with the various departments, most of which have parallel training divisions. The Commission's Staff Development and Training Division is primarily a co-ordinating agency. It promotes and organizes training activities, trains departmental instructors in the presentation of courses, prepares and gives certain courses of general application to all departments, publishes booklets and other training aids, assists departments in developing training to meet specialized needs and acts as a general clearing-house for the exchange of information on training matters.

Employee Relations.—The Civil Service Act confers on appropriate staff associations the right to be consulted on matters of remuneration and conditions of employment. This consultation may be initiated by either the official or staff sides and may take three forms. On questions of remuneration, which include certain allowances as well as pay, the consultation takes place between the associations and the Minister of Finance or such members of the public service as he may designate and this may, of course, include members of the Commission. On terms and conditions of employment as enumerated in Sect. 68 (1) of the Civil Service Act (which are mainly those with a fiscal effect, such as leave), the consultation takes place between the associations and the Commission and such members of the public service as the Minister of Finance may designate. On those terms and conditions of employment that come within the exclusive jurisdiction of the Commission, the consultation takes place between the associations and the Commission alone. This form of tripartite consultation was introduced on Apr. 1, 1962 when the new Civil Service Act came into force and is designed to be consistent with the distribution of authority in the Act.

Statistics of Federal Government Employment.*—The current monthly survey of Federal Government employment, started in 1952, covers all employees of the Government of Canada; employees in this sense exclude the Governor General and Lieutenant-Governors, Ministers of the Crown and Members of Parliament, judges, persons under contract and members of the Armed Forces, but include Force members of the Royal Canadian Mounted Police. The survey is divided into two main categories: (1) depart-

* Prepared in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

mental branches, services and corporations, and (2) agency and proprietary corporations and other agencies. Table 1 combines the two groups; Tables 2 to 6 cover employees in the first category and Table 7 covers employees in the second category.

¹ In addition, approximately 200 agency and proprietary corporation and other agency employees are included with those of other provinces.

Departmental Branches, Services and Corporations.—The salaries of employees in this group are paid from the Consolidated Revenue Fund. Definitions of classifications are as follows. "Salaried" employees include all persons paid on the basis of an annual salary rate with the exception of ships' officers who, though paid an annual salary rate, are subject to special treatment under the regulations made pertaining to the Financial Administration Act. The salaried staff are employed in departmental branches, services and corporations which are subject to regulation by the Treasury Board and for which the positions are outlined in the *Estimates of Canada*, or are established by means of supplementary Treasury Board Minutes. Thus, this category of employees includes persons subject to the provisions of the Civil Service Act plus salaried persons employed on the staffs of Cabinet Ministers and appointed by statute or by Order in Council, and also the salaried staffs of certain administrative branches of the Government that do not fall under the jurisdiction of the Civil Service Act.

"Prevailing Rate" employees are those who occupy continuing positions that are subject to prevailing rate regulations and are therefore paid on the basis of standard wage rates for similar work in the area in which the individual is employed. Regulations made under authority of the Financial Administration Act govern the third group entitled "Ships' Officers and Crews".

These three groups comprise what may be called the "regular" employees of the government service. "Casuals and Others" are principally persons employed on a non-continuing basis.

2.—Employees in Departmental Branches, Services and Corporations of the Federal Government, by Province and Sex, as at Mar. 31, 1964

NOTE.—Excludes agency and proprietary corporations and other agencies, figures for which are given in Table 7.

¹ Includes retroactive payments resulting from salary increases to certain salaried groups.

² Includes retroactive payments resulting from a salary revision for professional staff.

Table 4 presents metropolitan area data on staff employed in departmental branches, services and corporations. The 17 metropolitan areas listed are those defined for purposes of the 1961 Census of population, with subsequent amendments (annexations, etc.) considered. Included are employees who work within the boundaries of the metropolitan areas; employees residing within those areas but working outside are excluded.

4.—Federal Employees in Metropolitan Areas, by Sex, as at Sept. 30, 1964 and Earnings for September 1964

Table 5 presents statistics for departmental branches, services and corporations on the basis of a classification by function. The purpose of such classification is to supply a means of studying the operation of government without the complication that results from differences in administrative establishment. This analysis is useful in three ways. First, it permits a detailed study of employment by the Government of Canada according to the main purposes or functions and, since these functions are not subject to the periodic changes that alter the administrative structure of the Government, it is possible to develop a statistical series which, with minor exceptions, is consistent over an extended period of time. Secondly, since differences in administrative establishment are eliminated, it is possible to make meaningful comparisons between Federal Government expenditures on employment and similar expenditures by other levels of government. Thirdly, an analysis of the relationship between expenditures on employment and total expenditures may be made with regard to each function.

Table 6 is an administrative analysis of departmental branches, services and corporations, showing data for these bodies as they were organized at Mar. 31, 1964. Because of periodic changes in the administrative structure of the Government, comparisons over a period of years should be based on the classification by function given in Table 5. Although most salaried staffs fluctuate little during the year, the Taxation Branch of the Department of National Revenue increases its staff considerably in March and April because of the heavy flow of income tax returns during that period, the Legislation branches employ extra staff during each session of Parliament, and several departments employ considerable numbers of students in the summer months. Prevailing rate and other types of employment generally reach a peak in numbers during summer and decline to a lower level in winter.

5.—Federal Government Employees as at Mar. 31, 1964, and Regular Earnings for the Year Ended Mar. 31, 1964, classified by Function

NOTE.—Excludes agency and proprietary corporations and other agencies; figures for which are given in summary form in Table 7.

¹ Effective Aug. 21, 1963 the printing establishment of the Department of Public Printing and Stationery was transferred to the Department of Defence Production. Later, the office of the Queen's Printer (publisher) was transferred to the jurisdiction of the Secretary of State. The purchasing and stores activities were absorbed by the Department of Defence Production effective Apr. 1, 1964. Details of resulting staff movements are not available and the data are accordingly shown under the respective former Departments.

² Includes North Atlantic Treaty Organization and Canada's Civilian Participation as a member of the International Commissions for Supervision and Control in Indo-China.

³ Excludes field parties—prevailing rate employees paid \$399,000; and ships' officers and crews paid \$914,000.

⁴ Excludes part-time weather observers paid \$29,503,000 from postal revenues.

⁵ Excludes the Governor General and 10 Lieutenant-Governors paid \$170,000; 361 judges paid \$6,397,000, and 25 Ministers of the Crown paid \$374,000.

⁶ Includes Emergency Measures Organization with employee earnings of \$228,032 for salaried employees and \$14,767 for prevailing rate employees; Industry with \$10,179 for salaried employees and \$31,605 for casual employees; Municipal Development and Loan Board with \$12,686 for salaried employees; and the Bureau of Government Organization with \$71,679, not detailed above. In addition, in order to avoid revealing particulars relating to individuals, 21 prevailing rate employees paid \$73,375, and 9 casual employees paid \$20,360 are excluded from the departmental detail but included here.

Agency and Proprietary Corporations and Other Agencies.—The following are organizations owned by the Federal Government as at Mar. 31, 1964. Employees and earnings are shown by month in Table 7; a provincial distribution of employees and a summary of the total payroll in each of the three groups is given in Table 1, p. 146.

Agency Corporations

Atlantic Development Board
Atomic Energy of Canada Limited
Canadian Arsenals Limited
Canadian Commercial Corporation
Canadian Patents and Development Limited*
Centennial Commission†

Crown Assets Disposal Corporation
Defence Construction (1951) Limited
National Battlefields Commission
National Capital Commission
National Harbours Board
Northern Canada Power Commission

Proprietary Corporations

Canadian Broadcasting Corporation
Canadian National Railways
Canadian Overseas Telecommunication Corporation
Central Mortgage and Housing Corporation
Eldorado Aviation Limited
Eldorado Mining and Refining Limited
Export Credits Insurance Corporation

Farm Credit Corporation
Northern Transportation Company Limited
Polymer Corporation Limited
St. Lawrence Seaway Authority
The Seaway International Bridge Corporation Limited
Trans-Canada Air Lines (Air Canada from Jan. 1, 1965)

Other Agencies

Bank of Canada
Canadian Wheat Board
Economic Council of Canada
Industrial Development Bank

Canadian Corporation for the 1967 World Exhibition
Northern Ontario Pipe Line Crown Corporation‡
Office of the Custodian

Provincial Government Employment

Table 8 shows gross payrolls (including retroactive pay, salary, adjustments and overtime payments) of provincial government employees, exclusive of those for British Columbia, for the month of March 1965. Provincial government payrolls for the whole of the year ended Mar. 31, 1965 amounted to \$1,082,200,000; payrolls for departmental services employees amounted to \$643,400,000 and accounted for 59.4 p.c. of the total, those of institutions of higher education received \$112,600,000 or 10.4 p.c., those of provincial government enterprises \$313,100,000 or 28.9 p.c., and those of workmen's compensation boards \$13,100,000 or 1.3 p.c. of the total.

The only data available for British Columbia and included in the table are for employees of institutions of higher education.

* Staffed by employees of the National Research Council.

† Excludes the National Conference on Canada's Centennial, which is not an agent of Her Majesty nor part of the Public Service but draws on the staff of the National Centennial Administration.

‡ Staffed by employees of Defence Research Board and Defence Construction (1951) Limited.

¹ Departmental services of the Northwest Territories are staffed by employees of the Government of Canada who are included in the statistics under "Federal Government Employment".

PART V.—CANADA'S EXTERNAL RELATIONS*

Canada's Status in the Commonwealth.—The Imperial Conference held in London in 1926 marked a turning point in the history of the then British Empire and was an important step in the evolution from an Empire to a Commonwealth. At the 1926 Conference the self-governing countries, consisting of Britain and the Dominions, were described as being "autonomous countries within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations". The Governors General of the Dominions were recognized as having in all essential respects the same constitutional position as the Crown in Britain. It was also stated by the Conference that "it is the right of the Government

* Prepared (June 1965) by the Department of External Affairs.

of each Dominion to advise the Crown in all matters relating to its own affairs". Subsequent to this important meeting, Canada's stature and status in the international community continued to grow. Following from the earlier (1923) Imperial Conference, Canada exercised the powers of treaty-making and had established its own diplomatic missions overseas. The Statute of Westminster in 1931 provided more explicit recognition of the principles of equality of status by removing the remaining limitations on the legislative autonomy of Commonwealth countries. As a further development of Canada's independent position, all legal cases started in Canada after Dec. 23, 1949 could no longer be appealed to the Privy Council in London and the Supreme Court of Canada became the final court of appeal for all Canadian legal cases.

Canada's International Status.—The growth of Canada's international status is reflected in the development of the Department of External Affairs. A review of the organization and development of that Department is given in the 1952-53 Year Book, pp. 101-104; a brief outline is given at p. 121 of this volume.

The following Section 1 covers Canadian diplomatic representation abroad and representation of other countries in Canada. Section 2 deals with Canada's main international activities during 1964 and early 1965 with respect specifically to the Commonwealth, the United Nations, and the North Atlantic Treaty Organization. International economic aid programs and Canada's participation in the Organization for Economic Co-operation and Development are covered separately. Although these fields are considered to be the most significant for the purposes of this publication, it should be noted that Canada's activities in other areas are also of importance. The *External Affairs Monthly Bulletin*† covers all activities of the Department.

† Obtainable from the Queen's Printer, Ottawa, \$1 per year.

Section 1.—Diplomatic Representation as at Apr. 30, 1965

NOTE.—Changes in this listing subsequent to Apr. 30, 1965 and names of current representatives are given in *Canadian Representatives Abroad and Representatives of Other Countries in Canada*, published thrice yearly and obtainable from the Queen's Printer, Ottawa, price 35 cents per copy.

1.—Canadian Representation Abroad

Country and Year Representation Established	Present Status of Representative	Address
Argentina.....1941	Ambassador.....	Bartolomé Mitre 478, Buenos Aires
Australia.....1939	High Commissioner.....	Commonwealth Ave., Canberra
Austria.....1952	Ambassador.....	49-51 Obere Donaustrasse, Vienna
Belgium.....1939	Ambassador.....	35, rue de la Science, Brussels
Bolivia.....1961	*Ambassador.....	c/o Canadian Embassy, Edificio Boza, Carabaya 831, Plaza San Martin, Lima, Peru
Brazil.....1941	Ambassador.....	Avenida Presidente Wilson 165, Rio de Janeiro
Britain.....1880	High Commissioner.....	Canada House, Trafalgar Square, London S.W.1
Burma.....1958	*Ambassador.....	c/o Office of the High Commissioner for Canada, 44 Ampang Rd., Kuala Lumpur, Malaysia

Section 2.—International Activities, 1964-65

Subsection 1.—Canada and Commonwealth Relations

The Commonwealth today has been transformed basically from the compact and like-minded family of nations of predominantly European stock which constituted the Commonwealth association from the enactment of the Statute of Westminster to 1947. With its present membership of 21 sovereign states covering about one quarter of the earth's land surface, representing more than 700,000,000 people of many colours, creeds and languages, and including both economically developed and under-developed countries, as well as governments committed and uncommitted in the international power groupings, the Commonwealth more accurately reflects the world over which it spreads so widely. The interests of its members extend to all continents, and the variety of problems demanding their attention has greatly increased in scarcely more than a decade.

Commonwealth members are enumerated according to the year (if post-1931, noted in brackets) when membership was proclaimed: Britain; Canada; Australia; New Zealand; India (1947); Pakistan (1947); Ceylon (1948); Ghana (1957); Malaya (1957); Nigeria (1960); Cyprus (1961); Sierra Leone (1961); Tanganyika (1961); Jamaica (1962); Trinidad and Tobago (1962); Uganda (1962); Zanzibar (1963); Kenya (1963); Malawi (1964); Malta (1964); Zambia (1964); Gambia (1965). Early in 1964, Tanganyika joined Zanzibar to form the United Republic of Tanzania. When Singapore, Sarawak and Sabah joined the Federation in September 1963, Malaya became Malaysia.

Membership in the Commonwealth is a keystone of Canadian foreign policy. Canada has supported the extension and development of a strong Commonwealth, capable of exerting significant influence for international peace and progress. Commonwealth ties give Canada a special relationship with this group of nations which, despite the diversity of their backgrounds, share important ideals and traditions in common. Commonwealth ties are characterized in the main by a spirit of co-operation developed through consultation and exchanges of views. These are continuous not only in Commonwealth capitals but in other countries, as also at the United Nations and other international gatherings.

In addition to these continuing exchanges at many levels, special meetings are convened for the purpose of discussing and co-ordinating the growing body of Commonwealth plans and undertakings in special fields, and to review international developments in relation to the Commonwealth context. The most important conference of this kind in

1965 was the meeting of Heads of Government (Prime Ministers and Presidents) opening in London on June 17. This was the thirteenth in the series of these meetings held at intervals since the end of the Second World War. Malta, Zambia and Gambia, the latest three countries to accede to membership, were represented for the first time as independent nations.

Canada's external aid for developing countries continued to be directed, in the main, to Commonwealth countries through the Colombo Plan, the Canada-West Indies Aid Program, and the Special Commonwealth Africa Aid Program (SCAAP). Canada's total contribution under the Colombo Plan since the Plan's inception exceeds \$500,000,000. Canada aided Commonwealth countries in Africa through SCAAP to a total of \$21,000,000 for the period 1960-64. Approximately \$16,000,000 was made available for aid and technical assistance to Commonwealth Caribbean countries from 1958 to 1964. During 1964 Canada also undertook military assistance programs designed to improve the defence capability of certain Commonwealth countries. To this initiative may be added the adoption of a new special development-loan program for which \$50,000,000 is now set aside yearly. On the whole, therefore, as Canadian contributions to already approved assistance programs increased, new ventures have expanded even further the total of Canada's external aid, over 90 p.c. of which goes to Commonwealth countries.

Canada is an active participant in the Commonwealth Scholarship and Fellowship Plan (see p. 173) and is also playing a significant part in the training and provision of teachers for service in Commonwealth countries and assisting in plans for co-operation in technical education. During the academic year 1964-65, there were 261 Canadian teachers and 61 Canadians serving on university assignments under Canadian Government aid programs in the less-developed countries of Southeast Asia, Africa and the Caribbean area.

Subsection 2.—Canada and the United Nations

The problem of financing peace-keeping operations, and the even more important constitutional questions that it raised, dominated developments at the United Nations in 1964. The immediate problem arose out of the accumulated arrears which at the end of the year amounted to \$115,000,000, 98 p.c. of which represented unpaid assessments for the peace-keeping operations in the Middle East and the Congo. The Soviet Union and its allies were sufficiently in arrears to be subject to Article 19 of the Charter, which stipulates loss of vote in the General Assembly for defaulting states when arrears exceed the total of assessed contributions for the two previous years. The Soviet bloc and France took the position that these assessments were not a binding obligation to which Article 19 would be relevant, while Canada, the United States, Britain and the majority of members maintained that they were properly authorized assessments and should be paid. Although neither side was prepared to give way on the important points of principle at stake, both wished to avoid a confrontation over the application of Article 19 and, consequently, not only was the opening of the nineteenth session of the General Assembly postponed until Dec. 1 in the hope that the problem could be solved by negotiation but, when it did convene, it was decided not to deal with issues requiring a vote. After it became clear that the financial issue required extensive further study and that, in any case, little could be accomplished under the "no vote" procedure, the General Assembly adjourned on Feb. 18, 1965, but before doing so set up a 33-member Special Committee on Peace-keeping Operations "to review the whole question of peace-keeping operations in all their aspects" and to report back to the General Assembly by June 15. Canada is one of its members.

In addition to the financial question, there were a number of other developments in the peace-keeping field in 1964. The United Nations Operations in the Congo (ONUC) was withdrawn at the end of June after four years of service during which it helped to maintain law and order and to preserve the territorial integrity of the Congo, and the United Nations Yemen Observation Mission (UNYOM) also concluded its activities in

supervising the cease-fire agreements between Saudi Arabia and the United Arab Republic. Of particular significance was the unanimous decision of the Security Council in March 1964 to establish the United Nations Force in Cyprus (UNFICYP) to contain the communal strife between the Greek and Turkish communities on that island. It was authorized on the basis of voluntary financing instead of assessment of the whole membership as was the case for the operations in the Middle East and the Congo. Canada contributed troops to all these peace-keeping operations as well as to the United Nations Emergency Force (UNEF), the United Nations Truce Supervision Organization (UNTSO) and the United Nations Military Observer Group in India and Pakistan (UNMOGIP).

Canada also convened a meeting in Ottawa in November to consider the technical aspects of the United Nations peace-keeping operations. Twenty-three countries which had contributed to past peace-keeping operations or which had formed or were intending to form standby units for this purpose were represented. It was generally agreed that as a result of the meeting the participants had a better understanding of each other's problems and that their governments would be able to put this knowledge to use in preparing for future requests from the United Nations for military assistance in emergencies.

In 1964 the United Nations continued to carry out its extensive programs in the field of economic development. The most significant event in this respect was the convening in Geneva from March to June of the United Nations Conference on Trade and Development (UNCTAD), the largest economic conference in the history of the United Nations. It adopted some 60 recommendations on a wide variety of subjects and in December 1964 it was established as an organ of the General Assembly. The United Nations Expanded Programme for Technical Assistance (EPTA) supplied 2,500 experts and 3,000 fellowships to developing countries, while the United Nations Special Fund had at its disposal approximately \$90,000,000 to spend on pre-investment assistance to developing countries.

The advance of colonial territories toward independence continued and in 1964 Malta, Malawi and Zambia were admitted to the United Nations. The Special Committee of Twenty-four met frequently to consider a number of colonial issues including Rhodesia, South-West Africa, Aden, British Guiana and the Portuguese territories in Africa. The question of the *apartheid* policies of the South African Government remained in the forefront and was discussed in a series of meetings of the United Nations committees concerned and at the conferences of some of the Specialized Agencies.

In the social sector, the Specialized Agencies continued their efforts to advance education, relieve hunger and improve public health, while the High Commissioner for Refugees and UNICEF carried on with their invaluable work on behalf of refugees and of children. During the year, the Human Rights Commission devoted much of its time to the drafting of a convention on racial discrimination and a companion declaration on religious intolerance.

Since 1965 is International Co-operation Year, the Canadian Government and non-governmental organizations have sought to make its objectives better known and to give them added dimension by engaging in further projects in aid of the developing countries.

Canadian Financial Contributions to the United Nations.—In 1964, Canada's contributions to the United Nations system were as follows:—

<i>Agency</i>	<i>Percentage Assessment</i>	<i>Contribution (Canadian \$)</i>
United Nations—		
Regular budget.....	3.12	2,730,031
Special Accounts—		
Operations in the Middle East (UNEF)—

¹ Jan. 1, 1964 to June 30, 1964.

² Estimated. Canada pays all costs of maintaining its contingent in Cyprus but recovers from the UN the out-of-pocket expenses of Canadian personnel at Nicosia Zone and UNFICYP headquarters. The figure cited does not include salaries and similar costs which Canada would have had to pay if the personnel had remained in Canada.

³ Canada has paid in full its subscriptions to these organizations and, therefore, was not required to make payments in 1964. It is expected, however, that additional subscriptions will be made to the IBRD and IMF in 1965 as a result of the general review of quotas in the IMF authorized by its Board of Governors at the Annual Meeting in Tokyo in 1964.

⁴ Canada withdrew from ICEM in 1962 but has continued to make an annual grant for the transportation of refugees.

Specialized Agencies.—Canada is a member of each of the 13 Specialized Agencies of the United Nations. As well, Canada holds membership in the International Atomic Energy Agency (IAEA), an autonomous international organization under the aegis of the United Nations. These Agencies are bodies with wide international responsibilities established by intergovernmental agreement, which act in relationship with the United Nations to assist in carrying out the terms of the Charter. Co-ordination of their activities is promoted by the Administrative Committee on Co-ordination established by the Economic and Social Council. The Committee is composed of the Secretary-General of the United Nations and the executive heads of the Specialized Agencies and the Director-General of IAEA. It considers not only administrative questions common to them all, but projects on problems of special urgency to be undertaken jointly by several Agencies.

International Labour Organization.—The International Labour Organization (ILO) was originally established with the League of Nations in 1919 and became a Specialized Agency of the United Nations in 1946. It brings together representatives of governments, employers and workers from 110 member states in an attempt to promote social justice by improving working and living conditions in all parts of the world. ILO is responsible for a number of technical programs, financed by the United Nations Special Fund and the Expanded Programme of Technical Assistance, as well as training projects under its regular budget. To further its work, the ILO holds numerous meetings during the year, including the regular International Labour Conference each June in Geneva. At the Conference in June 1964, the principal debate focused on methods of modernizing and streamlining the programs and structures of the Organization.

Food and Agriculture Organization.—The Food and Agriculture Organization (FAO) came into being in 1945, the first Conference being held in that year in Quebec City. The objectives of the Organization are to raise the levels of nutrition and living standards of its members and to improve the techniques of the production and distribution of food and agricultural, fishery and forestry products. To this end, the FAO Secretariat collects, analyses and distributes technical and economic information and encourages appropriate national and international action. A Council meets twice a year to give direction and policy guidance to the Secretariat; the FAO Conference, which is the governing body of the Organization, meets every other year. Headquarters are in Rome, Italy.

Canada has participated actively in FAO activities and is a member of the Council, the Committee on Commodity Problems (CCP), the Consultative Sub-Committee on Surplus Disposal, the FAO Group on Grains, the North American Forestry Commission and other FAO bodies. A number of Canadians are on the staff at Rome headquarters and many Canadians have undertaken assignments under FAO technical assistance programs. Canadian membership in the Organization is provided for by an Act of the Canadian Parliament passed in 1945. A committee of officials from Canadian Government departments (the Canadian Interdepartmental FAO Committee) has been established to maintain liaison between the FAO Secretariat and the Canadian Government.

The FAO and the United Nations are jointly responsible for the World Food Program, a three-year experimental project that went into operation at the beginning of 1963. The Program provides food aid on a multilateral basis for emergency relief and to promote economic and social development, including feeding of children. With a contribution of approximately \$7,000,000 to the three-year project, Canada is the third largest financial supporter of the World Food Program.

World Health Organization.—The World Health Organization (WHO) came into being in 1948 and is one of the largest of the Specialized Agencies of the United Nations, having a membership of 120. Functioning through the World Health Assembly (an organization composed of an Executive Board, a Secretariat and six Regional Committees), WHO acts as a directing and co-ordinating authority on international health matters. In addition, it provides advisory and technical services to help countries develop and improve their health services. The 17th World Health Assembly was held in Geneva in March 1964. (See also the item "International Health" in Subsect. 7, Sect. 1, Part I of Chapter VI on Public Health, Welfare and Social Security.)

United Nations Educational, Scientific and Cultural Organization.—The United Nations Educational, Scientific and Cultural Organization (UNESCO) was established in 1946 "to contribute to peace and security by promoting collaboration among the nations through education, science and culture in order to further universal respect for justice, for the rule of law, for human rights and fundamental freedoms".

Total membership in UNESCO at the end of 1964 was 117 states. The Organization is made up of three principal organs—the General Conference, which is the policy-making body, the Executive Board and the Secretariat. Representatives from member states make up the General Conference which meets every two years to consider applications for membership, elect the Executive Board, plan the program and approve the budget for the ensuing two-year period. The latest General Conference was held at the headquarters of the Organization in Paris in October and November 1964. It approved a budget of \$48,900,000, giving priority to the educational needs of the developing countries and to science activities, particularly the application of science to development. The Canadian assessment rate is 2.98 p.c. The next General Conference will take place in Paris in October 1966.

International Civil Aviation Organization.—The International Civil Aviation Organization (ICAO), with headquarters in Montreal, is the only Specialized Agency of the United Nations with headquarters in Canada. Canada has been a member of the 27-nation

Council, the governing body of ICAO, since its inception in 1947. The Fifteenth Session of the ICAO Assembly, consisting of all member states, will be held in Montreal from June 22 to July 19, 1965.

International Telecommunication Union.—Canada is a member of the International Telecommunication Union (ITU), a Specialized Agency of the United Nations, which traces its origin to the International Telegraph Convention of 1865 and the International Radio Telegraph Convention of 1906. The Administrative Council of the ITU met in Geneva in the spring of 1964; Canada was represented at that meeting and at meetings of subsidiary bodies which took place during the year.

World Meteorological Organization.—Canada is a member of the World Meteorological Organization (WMO), a Specialized Agency of the United Nations since 1951 but developed from the International Meteorological Organization founded in 1878. During 1964, Canada was represented at the regular meetings of a number of the subsidiary bodies of WMO. Presidents of two of the eight technical commissions of the Organization elected in 1964 were Canadian.

Inter-Governmental Maritime Consultative Organization.—The Inter-Governmental Maritime Consultative Organization (IMCO) was established in 1959 to promote international co-operation on technical shipping problems and the adoption of the highest standards of safety and navigation. In September 1964, an extraordinary session of the IMCO Assembly was convened in London. Membership of the Council was expanded during 1964 from 16 to 18 in order to provide broader representation on a geographical basis.

Universal Postal Union.—One of the oldest and largest of the Specialized Agencies, the Universal Postal Union (UPU) was founded in Berne in 1874 with the principal aim of improving postal services throughout the world and promoting international collaboration. The Universal Postal Congress is the supreme authority of the UPU and normally meets every five years to review the Universal Postal Convention and its subsidiary instruments. In the interim, activities of the Union are carried on by an Executive Council, a Consultative Committee on Postal Studies and an International Bureau. The 15th Congress, which should have convened in 1962, was held in Vienna from May 29 to July 10, 1964.

International Monetary Fund.—The International Monetary Fund, set up by the Bretton Woods Conference in 1944, came into being in 1945. It provides machinery for international consultation and collaboration on monetary, payment and exchange problems. Included in these purposes are the promotion of exchange stability, the elimination of exchange restrictions, the establishment of a multilateral system of current payments and the expansion and balanced growth of international trade. Also, member countries under certain conditions may draw on the regular resources of the Fund, which now amount to some \$15,993,000,000 (of which the equivalent of approximately \$10,000,000,000 is in gold and convertible currencies) or on the supplementary resources of \$6,000,000,000 made available in 1962 under the General Arrangements to Borrow. The Fund had 102 members as of Apr. 30, 1965. Canada has been represented on the Fund's Executive Board since its inception.

International Bank for Reconstruction and Development.—The IBRD or World Bank was founded at the same time as the International Monetary Fund at the Bretton Woods Conference in 1944 to assist the development of productive resources in member countries by extending loans where private capital is not available on reasonable terms and by providing technical assistance. The loans are made from the paid-up subscriptions of member states, from the surplus accumulated by the Bank and from loans raised in the markets of member states. By Dec. 31, 1964, the subscribed capital was \$21,228,800,000 (U.S.). The Bank's first loans were for European postwar reconstruction but in 1948 the Bank turned to lending for development and an increasing proportion of its funds has been directed to the less-developed areas of the world. As of Dec. 31, 1964 the Bank had made 402 loans totalling \$8,352,200,000 (U.S.) in 74 countries or territories. About \$6,287,100,000

(U.S.) of this had been disbursed and \$2,679,500,000 had been either repaid to the Bank or sold to other investors. Up to Dec. 31, 1964, the Bank had used or been able to allocate for lending the equivalent of approximately \$1,718,000,000 from paid-in capital, including the full \$75,000,000 of the paid-in portion of Canada's subscription.

International Finance Corporation.—The function of the International Finance Corporation, which is an affiliate of the IBRD, is to promote the growth of productive private enterprise by assisting private capital, by acting as a clearing house in bringing together investment opportunities and private capital and by helping to enlist managerial skill and experience when not otherwise available to a project. Of a total capital subscription of \$99,000,000 (U.S.), Canada has provided \$3,600,000.

International Development Association.—The IDA, also an affiliate of the IBRD, was established in September 1960 to meet the situation of a growing number of less-developed countries whose need for and ability to make use of outside capital is greater than their ability to service conventional loans. Consequently, the terms of IDA development credits are designed to impose far less burden on the balance of payments of borrowing countries than conventional loans. Credits extended to date have each been for a term of 50 years, bearing no interest. At the end of 1964, paid-in and prospective resources of IDA amounted to \$1,595,000,000 (U.S.). Prospective contributions to be paid in over the three years 1965-68 (subject to legislative authorization) will amount to \$750,000,000 (U.S.) of which Canada's share will be \$41,700,000 (U.S.). IDA began operations in November 1960 and extended its first development credit in May 1961. By Dec. 31, 1964, it had extended a total of 70 development credits totalling \$1,002,000,000 to 27 countries in Africa, Asia, the Middle East and the Western Hemisphere.

International Atomic Energy Agency.—Formed in 1957, the International Atomic Energy Agency (IAEA) is an autonomous international organization under the aegis of the United Nations. The Agency was given a mandate to seek to accelerate and enlarge the contribution of atomic energy to peace, health and prosperity throughout the world in a variety of ways. Because Canada has been designated as one of the five members most advanced in nuclear technology, including the production of source materials, a Canadian representative has served on the IAEA Board of Governors since the inception of the Agency. In 1964, Canada's Permanent Representative was elected Chairman of the Board.

During September, the IAEA sponsored the Third United Nations Conference on the Peaceful Uses of Atomic Energy. Nearly 3,700 delegates and observers from 77 countries took part. Canada sent a delegation of approximately 60 persons from industry and government. The main theme of the Conference was the production of nuclear power for peaceful purposes. This Conference was followed by the IAEA Eighth General Conference held at the Agency headquarters in Vienna. Atomic Energy of Canada Limited donated a \$30,000 Gammacell for research purposes at the Agency Laboratories in Vienna, which was installed in May 1964. Canada also made a voluntary contribution of \$57,600 to the General Fund to be applied to the Agency's technical assistance program, which placed Canada fourth in this respect after the United States, Britain and West Germany.

International Law Commission.—By Article 13(1) of the Charter of the United Nations, one of the purposes of the UN General Assembly is to encourage the progressive development of international law and its codification. In order to implement and to assist in this function, the International Law Commission was created by a General Assembly resolution dated Nov. 21, 1947. It is composed of 25 members who are elected in their individual capacity. They serve for terms of five years and, in general, represent the main forms of civilization and principal legal systems of the world. On Nov. 28, 1961, Canada's Under-Secretary of State for External Affairs was elected to membership of this Commission. The 25 countries whose nationals form, at present, the International Law Commission are: Afghanistan, Algeria, Argentina, Austria, Brazil, Britain, Canada,

China, Dahomey, Ecuador, Finland, France, India, Iraq, Israel, Italy, Japan, Nigeria, Poland, Spain, the Union of Soviet Socialist Republics, the United Arab Republic, the United States of America, Uruguay and Yugoslavia.

Subsection 3.—Canada and the North Atlantic Treaty Organization*

There were two Ministerial Meetings held during 1964, and meetings at NATO headquarters in Paris of the Permanent Representatives of the North Atlantic Council were held continuously throughout the year.

The annual spring meeting was held in The Hague from May 12-14, attended by the Foreign Ministers of the NATO Alliance. The Canadian Delegation was led by the Secretary of State for External Affairs. Ministers discussed the annual political appraisal of the state of the Alliance and emphasized the role of the Atlantic Alliance as the indispensable guardian of security and peace, and thus as the prerequisite for social and economic progress. The NATO Council reaffirmed that a just and peaceful solution to the problem of Germany can be reached only on the basis of the right of self-determination, and agreed that every suitable opportunity should be taken to bring nearer to realization the wish of the German people for reunification in freedom, and thereby ensure an enduring peace in Central Europe.

NATO Ministers expressed their concern at the situation in the southeastern region of NATO arising from the continuing disorders in Cyprus. They reaffirmed the full support of their governments for the action decided upon by the United Nations Organization with a view to restoring law and order, and for the efforts of the mediator appointed by the United Nations to seek an agreed solution of the problem.

Ministers expressed their deep regret at the impending departure of Mr. Dirk U. Stikker, who announced his intention of retiring from the Secretary-Generalship of NATO. The Council invited Signor Manlio Brosio, former Deputy Prime Minister and Defence Minister in the Italian Government and the present Italian Ambassador in Paris, to become Secretary-General in succession to Mr. Stikker as from Aug. 1, 1964. Signor Brosio informed the NATO Council of his acceptance of this invitation.

The annual Ministerial Meeting held in Paris Dec. 15-17 was attended by a Canadian Delegation led by the Secretary of State for External Affairs and the Minister of National Defence. Ministers surveyed the whole field of East-West relations and noted that recent developments in China and the Soviet Union had increased the uncertainties with which the world is faced. They reiterated their conviction that it remained essential for the Alliance to maintain and strengthen its unity. Ministers also reviewed the situation in various areas in Asia, Africa and Latin America. They reaffirmed their interest in the stability of those areas in the economic and social welfare of the peoples concerned.

In their discussions on the state and future progress of the Alliance, Ministers emphasized the importance of strengthening and deepening their political consultation. Recognizing the challenges that may face NATO in the years ahead, they directed the Council in Permanent Session to study the state of the Alliance and the purposes and objectives commonly accepted, and to keep Ministers informed.

Ministers expressed their conviction that the unity and military preparedness of the Alliance had safeguarded peace and preserved the freedom of the West in the past. So long as general and complete disarmament under effective international control has not been achieved, any weakening of the Allied defensive posture would expose the Alliance to increased pressures. Ministers therefore stressed the importance of maintaining the cohesion of member states in the strategic as well as the political field. Ministers also examined the problems concerning the Alliance in the field of conventional and nuclear weapons. A thorough exchange of views on these problems took place and will be continued. Ministers reaffirmed the significance they attached to the studies of the interrelated questions of

* The terms of the Treaty and the organization of the Council and subordinate committees are dealt with in the 1954 Year Book at pp. 113-115. A short review of the events leading up to the establishment of NATO and its subsequent membership is given in the 1960 Year Book at p. 167.

strategy, force requirements and resources, initiated at the Ottawa meeting in May 1963, and instructed the Council in Permanent Session to continue them with the assistance of the NATO Military Authorities.

With regard to Greek-Turkish relations, Ministers heard a report by the Secretary-General on the "watching brief" conferred on his predecessor at The Hague in May 1964 and agreed that this watching brief should continue. They reaffirmed their determination to lose no opportunity of contributing to a reduction in tension and a peaceful, agreed and equitable solution of the problem of Cyprus, confirming also their support for the efforts of the United Nations and the mediator.

Canadian Contributions to NATO.—Support for NATO during 1964 continued to be one of the foundations of Canadian foreign policy. As its contribution to the military strength of the Alliance, Canada maintains an army brigade and an air division in Europe and supporting forces in Canada, including one battalion assigned to the Mobile Reserve of Allied Command Europe. It has assigned a substantial naval force to the Supreme Allied Commander Atlantic (SACLANT) for the defence of the Canada-United States region in case of emergency and participates with the United States in the defence of the North American Continent through the North American Air Defence Command (NORAD).

Since 1950, Canada has contributed approximately \$1,800,000,000 in mutual aid to European members of NATO. The aid program, consisting of contributions to NATO infrastructure and military costs, transfers of equipment to member countries and aircrew training in Canada of NATO forces, continued throughout 1964. This program has decreased in magnitude with the changing conditions and the increasing ability of the European members to meet their individual defence requirements.

Subsection 4.—Canadian External Aid Programs

The Colombo Plan.—The Colombo Plan for Co-operative Economic Development in South and Southeast Asia was conceived at the Commonwealth Meeting of Foreign Ministers held at Colombo, Ceylon, in January 1950. Although the Plan was initiated by Commonwealth governments, it is not exclusively a Commonwealth Program. It is designed to assist in the economic development and the raising of living standards of all countries and territories in the general area of South and Southeast Asia. Its membership now includes Afghanistan, Australia, Bhutan, Britain, Brunei, Burma, Cambodia, Canada, Ceylon, India, Indonesia, Japan, Korea, Laos, Malaysia, Maldives Islands, Nepal, New Zealand, Pakistan, the Philippines, Thailand, Viet-Nam and the United States; the latter is also engaged in a substantial program of economic aid in the same region. Afghanistan and the Maldives Islands are the latest members and were admitted to membership in 1963.

The Colombo Plan is supervised by a Consultative Committee composed of Ministers of the member countries, who meet once a year to review projects and exchange views on policy matters. As a consultative body, it makes no collective policy decisions binding member countries; a Council for Technical Co-operation, on which Canada is represented, meets regularly in Ceylon to develop the technical co-operation program of the Plan. Consultative Committee meetings were held in Karachi in 1952, New Delhi in 1953, Ottawa in 1954, Singapore in 1955, Wellington in 1956, Saigon in 1957, Seattle in 1958, Jogjakarta in 1959, Tokyo in 1960, Kuala Lumpur in 1961, Melbourne in 1962, Bangkok in 1963 and London in 1964. At the Jogjakarta meeting it was agreed to extend the Colombo Plan for another five years from June 1961, and this was similarly approved for a further five-year extension at the London meeting in 1964. Reports of the Committee on progress and future plans are published after each annual meeting; each report also contains sections describing the activities of member countries.

From the inception of the Plan in 1950 through April 1965, Canada made available a total of \$528,678,000 in grant aid for capital and technical assistance projects in South and Southeast Asia; Parliament appropriated \$64,007,000 for Canadian participation in 1964-65, including \$19,000,000 in Special Development Loans and \$19,500,000 for food aid. Al-

though nine countries are now receiving capital assistance from Canada, the largest contributions have so far been made to Ceylon, India, Malaysia and Pakistan. The Canadian contribution consists primarily of direct assistance to various development projects, including equipment for multi-purpose irrigation and hydro-electric projects, power-generating plants, construction and fisheries projects and resources surveys, hospital equipment and cobalt therapy units, as well as educational and laboratory equipment and books. It has also included gifts of raw materials, commodities and foodstuffs, such as industrial metals, asbestos, fertilizer, wheat, wheat flour and butter, from the internal sale of which recipient governments have been able to raise funds to meet local costs of economic development projects.

Under the Technical Assistance Program, up to March 1965, 2,931 persons from all countries in the area had come to Canada for training in a variety of fields, the major ones being public administration and finance, agriculture, co-operatives, engineering, mining and geology, statistics, health education and social welfare. More than 347 Canadian experts had been sent abroad for service in Colombo Plan countries in such fields as fisheries, agriculture, engineering, mining and prospecting, co-operatives, public administration, education and vocational training, and public health. Other Canadians were employed on aerial resources survey teams and on the installation and operation of capital equipment.

Commonwealth Caribbean Program.—In 1958, when the Federation of the West Indies was being formed, Canada undertook a five-year \$10,000,000-program of economic and technical assistance. It was later decided to continue providing assistance to the area after the dissolution of the Federation with the provision of \$2,100,000 in 1963-64 for Jamaica, Trinidad and Tobago, Barbados, Leeward and Windward Islands, British Guiana and British Honduras. As part of its expanded aid program for 1964-65, the Canadian Government made available in loans and grants to the area a total of \$9,000,000.

The major project undertaken by Canada at the request of the Federation was the provision of two passenger-cargo ships for inter-island transportation, at a cost of nearly \$6,000,000. The vessels were commissioned in the summer of 1961 and handed over to the West Indies Government. Other projects that have been completed include a deep water wharf in St. Vincent, a residence hall for the University of the West Indies in Trinidad, port-handling equipment for five harbours, schools in three islands and warehouses at two sites. Additional projects now under way include the provision of freshwater systems in two islands, an aerial survey of Trinidad and a series of development studies for that island, the provision of lumber for a housing scheme, factory buildings and rural electrification equipment for Trinidad, the construction of a bridge and sewerage system in Jamaica, the supply of a fishing vessel for Jamaica and the shipment of highway maintenance equipment and diesel locomotives to British Guiana.

A substantial amount of technical assistance has also been given. As of Mar. 31, 1965, training programs had been arranged in Canada for 346 students from the Commonwealth Caribbean. Their fields of study included agriculture, engineering, fisheries, forestry, medicine and public administration. In addition, 170 Canadians have been sent to the Commonwealth Caribbean; they included teachers, soil surveyors and advisers in statistics, legal drafting, housing, films, radio broadcasting, postal services, Indian affairs, technical education and harbour management.

Special Commonwealth Africa Aid Program.—In the autumn of 1960 the Canadian Government undertook, subject to parliamentary approval, to contribute \$10,500,000 to a Special Commonwealth Africa Aid Program over a three-year period beginning Apr. 1, 1961. The program, known as SCAAP, arose from discussions at the meeting of Commonwealth Prime Ministers in 1960. Roughly speaking, SCAAP is a counterpart in Africa of the Colombo Plan in Asia, although it is entirely a Commonwealth scheme. The main donor countries are Britain, Canada, Australia and New Zealand; some of the newer Commonwealth members, particularly India and Pakistan, have been able to provide

limited amounts of technical assistance in the fields in which they have experience and specialized knowledge. All of the Commonwealth areas of Africa, both independent countries and dependent territories, qualify for assistance under this program.

Within the context of Canada's expanded aid programs, increased levels of grant assistance were available in the year ended Mar. 31, 1965 for Commonwealth countries and territories of Africa. In addition, discussions were begun with a number of African countries on projects that would be suitable for special development loan financing.

During 1964-65, grant aid expenditures totalled almost \$5,000,000, a figure nearly 50 p.c. above the level of \$3,300,000 in the previous fiscal year. The increased expenditures related principally to the provision of teachers and advisers and of training facilities in Canada; expenditures for these purposes rose from \$2,256,000 in 1963-64 to \$3,691,000 in 1964-65. Expenditures on capital projects and the supply of equipment increased from \$1,106,000 to \$1,297,000 during the same period; the number of teachers and other technical advisers on assignment in Africa financed by Canadian aid funds rose from 189 to 278; and the number of African students receiving training in Canada under SCAAP and Commonwealth Scholarship Plan auspices was 400 compared with 278 in the previous year.

Construction progressed on a Trades Training Centre at Accra; this Centre, staffed by Canadians and Ghanaians, is expected to open its doors in January 1966. During 1964-65, projects were initiated or continued in six countries—Ghana, Kenya, Malawi, Nigeria, Tanzania and Uganda. Major projects were principally in the fields of resource development, mapping and education. The second phase of a mapping and aerial survey in Nigeria was begun, which will involve a total Canadian expenditure of almost \$3,500,000, representing the costs of Canadian photography carried out in Nigeria (Canadian aircraft and crew) and the production in Canada of the required survey maps. Canada is also participating in a similar mapping survey of South-East Tanzania and has committed \$1,000,000 to cover Canadian costs. Agreement was also reached on a feasibility survey for the establishment of a pulpwood industry in Malawi to exploit the timber resources of the Vipya Plateau. In Nigeria, as part of a comprehensive rural water development program, Canada undertook an extensive water resources survey.

Educational Assistance to French-Speaking States in Africa.—In April 1961, the Canadian Government announced an offer of assistance in the educational field to the French-speaking states in Africa, and subsequently appropriated \$300,000 for this purpose for each of the years ended Mar. 31, 1962, 1963 and 1964. It was decided at the commencement of this program that emphasis should be placed on the provision of Canadian teachers for Africa. For the year ended Mar. 31, 1965, aid was substantially increased and an allocation of \$4,000,000 was provided to allow for development of a capital assistance program as well as expansion of technical assistance. During the year, 67 teachers served in French-speaking Africa and there were 54 students receiving training in Canada. Preliminary surveys for bridge construction and hydro-electric development were carried out and an agriculture education survey of six countries was in progress at the end of the year. Arrangements were made to assist the Republic of Guinea in its roads improvement program by the provision of heavy equipment. A series of educational films was offered to Cameroon, Central African Republic, Chad, Congo, Dahomey, Morocco, Niger, Togo and Upper Volta. A contribution of \$500,000 was made to the UN Congo Civilian Fund.

The Commonwealth Scholarship and Fellowship Plan.—The proposal to establish a Commonwealth Scholarship and Fellowship Plan was made at the Trade and Economic Conference held at Montreal in September 1958. The Conference envisaged a scheme of 1,000 university scholarships, of which Britain undertook to provide one half and Canada one quarter. The details of the proposed scheme were worked out at the Commonwealth Education Conference at Oxford in 1959. This Plan was designed to enrich the intellectual life of each country of the Commonwealth by enabling an increased number of its abler students to share in the wide range of educational resources available through the Commonwealth and thus promote the equality of educational opportunity at

the highest level. During the academic year 1964-65 there were 237 Commonwealth scholars in Canada and, since the Plan first became operational during the 1960-61 academic year, a total of 479 scholars have come to Canada for advanced study.

Arrangements were made in 1965 to introduce Research and Visiting Fellowships as part of the Canadian contribution to this Plan. It is expected that each year three Research Fellowships will be awarded for a full academic year and five Visiting Fellowships for shorter periods. These Fellowships are intended for senior educationists from other Commonwealth countries to enable them to visit Canadian universities and other educational institutions to carry out investigations, study or research in their particular fields.

Co-operation with the United Nations and its Specialized Agencies, and with Other International Aid Programs.—In addition to the annual contributions made to the United Nations Expanded Programme of Technical Assistance, Canada arranges training programs in Canada for individuals studying under the auspices of the different Specialized Agencies. This service is also extended to the technical assistance program of the International Co-operation Administration of the United States as well as to other international aid organizations. Up to Mar. 31, 1965, more than 2,000 individuals had come to Canada through the various agencies from more than 100 countries in all parts of the world. Assistance is also given by recruiting Canadians for service with the Specialized Agencies on specific technical assistance assignments in under-developed countries.

External Aid Office.—As of Nov. 9, 1960, the operation and administration of Canada's external assistance programs became the responsibility of the External Aid Office, established by Order in Council of that date, and placed in charge of a Director General.

As mentioned under the separate programs above, additional funds were made available for grant assistance in 1964-65. Canada also introduced a development loan program for which \$50,000,000 was authorized by Parliament on a non-lapsing basis. The terms of the loans are comparable with those of the International Development Association—up to 50 years maturity, non-interest-bearing, ten-year grace period, and 0.75 of 1 p.c. service charge.

Also during 1964-65, Parliament approved for the first time the establishment of a separate food aid program under which the External Aid Office is able to purchase food products to meet part of the Canadian contributions to the FAO World Food Program and to meet the needs of countries requesting this form of Canadian assistance. During the year, some \$22,000,000 worth of wheat and flour was purchased under this appropriation for shipment to less-developed countries, the amount including a supplementary appropriation of \$7,000,000 to meet an emergency situation in India.

Subsection 5.—Organization for Economic Co-operation and Development

The Organization for Economic Co-operation and Development (OECD) was established in October 1961 as successor to the OEEC, with Canada and the United States joining the countries of Western Europe as full members of the new body. Japan, previously a member of the Development Assistance Committee, became, in May 1964, a full member of the OECD and the first member from outside Western Europe or North America.

The prime purpose of the OECD is to promote among member governments co-operation in the fields of economic policy, trade and assistance to developing countries, though it also provides a valuable forum for discussion of common problems in agriculture, industry, finance, technology and manpower policy. In 1963, Ministers approved an annual growth target for member countries for the next seven years of 4 p.c. in real gross national product. Because of its development from the former OEEC, the Organization was at first concerned largely with questions of primarily European interest but, as its membership expanded, it has become increasingly a recognized forum for broader consultation among advanced industrial countries, particularly on questions of economic and financial policy and on the problems of the developing countries. In this latter regard,

the OECD now constitutes the main forum for consultations among developed countries concerning the recommendations of the UN Conference on Trade and Development held in Geneva in the spring of 1964.

The OECD brings together government officials as well as representatives of private business, labour unions, universities and other non-governmental bodies in both deliberative and consultative capacities, and provides for international liaison among such groups. Within Canada, liaison has been established with the business community through the Canadian Business and Industry Advisory Committee, which was established in 1962 and comprises representatives of the Canadian Chamber of Commerce, the Canadian Council of the International Chamber of Commerce and the Canadian Manufacturers' Association. Parallel arrangements exist for consultation with Canadian labour organizations.

will be found on p. viii of this volume.*

Section 1.—Census of Population

This Section presents only a limited summary of the voluminous data on population recorded by the 1961 Census of Canada, with certain comparable data from earlier censuses. More detailed information is published in a series of reports which are obtainable from the Queen's Printer or the Dominion Bureau of Statistics. A list of these publications is available on request from the Information and Public Relations Division of the Dominion Bureau of Statistics.

Subsection 1.—Growth and Movement of Population*

Population Growth.—Canada's population stood at 18,238,000 in 1961 as against 10,377,000 in 1931 and 5,371,000 in 1901. In the first decade of the century, the gain of 34 p.c. was greater than in any censal period up to 1961. Growth was associated with the opening up of the West for settlement and massive immigration from overseas. During the 1901-11 period, about 1,760,000 immigrants entered the country and natural increase amounted to an estimated 1,000,000. As the total increase in population was 1,835,328, it is evident that there was substantial emigration during the period. In the 1911-21 period, population growth dropped to 22 p.c. Military losses in the First World War and losses during the influenza epidemic, which together amounted to about 120,000, were a factor in this decline. Although the flow of immigrants was reduced during the war years, it had been very heavy immediately preceding the War, so that the total number for the period (1,612,000) was very close to that for the previous censal period. However, emigration was also extremely high and the increase in population amounted to 1,581,306, representing 2 p.c. per annum compared with 3 p.c. in the 1901-11 period.

In the decade 1921-31, the rate of increase dropped to 18 p.c. Immigration fell to 1,200,000 and emigration was estimated at 1,000,000. Thus the increase in population,

* An outline of the growth of population in Canada since the beginning of the seventeenth century may be found in Vol. I of the 1931 Census. Other accounts of population growth prior to the present century are included in Vol. I of the 1941 Census and Vol. X of the 1951 Census.

which amounted to 1,588,837, was only 229,000 greater than the natural increase. A feature of this period was the rapid growth of population in Western Canada, partly the result of immigration and partly the result of an influx of people from Eastern Canada. During 1931-41, the population increase was just under 11 p.c. During the depressed conditions of the 1930's, marriage and birth rates were significantly lower and only 150,000 immigrants came to Canada, although, in addition, 75,000 Canadians returned from the United States. Emigration was also much lower than in the previous decades, amounting to an estimated 250,000. Natural increase was only 1,220,000, the crude birth rate falling from 27 per thousand of the population in the 1921-25 period to 24 per thousand in the succeeding five-year period and to 20 per thousand during much of the 1931-41 decade. During 1941-51, population growth was restored to pre-depression levels. Excluding Newfoundland which became part of Canada in 1949, it amounted to 19 p.c.; including Newfoundland it was 22 p.c. Much of the increase took place in the second half of the decade, reflecting heavy postwar immigration and a sharp rise in the marriage and birth rates.

In the 1951-61 period, the population growth rate at 30 p.c. came close to approaching the extremely high rate of the first decade of the century. However, the two periods contrast in many ways. In the early period there was a wider dispersal of population increases as whole regions across the Continent were opened up; in the recent period there was a concentration of growth in urban communities although some spreading of population into newly developed northern areas took place. Natural increase accounted for about 75 p.c. of the growth. Although there was some decline in the death rate, the trend of natural increase reflected very closely that of the crude birth rate which began to rise during the War and remained high throughout the period. Net immigration accounted for the remainder of the increase; during the decade, 1,542,853 immigrants entered the country, more than double the estimated emigration. Although all provinces gained in population during 1951-61, the rates of increase varied widely. The greatest increases resulted from a combination of natural increase and net migration which in the two large provinces of Central Canada and the two most westerly provinces accounted for over 87 p.c. of the total actual increase. In contrast, increases in the other six provinces were entirely accounted for by natural increase.

1.—Numerical Distribution of Population by Province, and Percentage Change from Preceding Census, Decennial Census Years 1901-61

NOTE.—Populations for the decennial census years 1871, 1881 and 1891 are given in the 1956 Year Book, p. 149. The populations of the Prairie Provinces in 1906, 1916, 1926, 1936 and 1946 will be found in the 1951 edition, p. 131, and census populations for 1956 in the 1961 edition, p. 146.

Table 3 shows the natural increase and the total population increase for Canada and the provinces in the periods 1941-51, 1951-56 and 1956-61. The balance between the total increase in population and the natural increase during a period represents the difference between inward and outward movements, i.e., net migration. The net migration data shown for provinces indicate the net movement of population arising partly from interchange of population between provinces and partly from persons entering and leaving the country.

3.—Numerical Changes in the Population of the Provinces through Natural Increase and Migration 1941-51, 1951-56 and 1956-61

The earlier movement of population in Canada from east to west has not been apparent since the 1920's. Although British Columbia has continued to show population gains from migration since 1931, much of this gain has been at the expense of the Prairie Provinces. Although the three Prairie Provinces lost by migration about 267,000 persons between 1941 and 1951, they gained 25,000 in the period 1951-56 and 18,000 in the period 1956-61. Manitoba lost almost 61,000 people between 1941 and 1951 but only 5,000 persons since then. Saskatchewan has been a consistent loser since 1941, losing on the average almost 20,000 a year during the 1940's and around 8,000 a year during the 1950's. Alberta lost only about 7,000 in the decade 1941-51 and gained close to 65,000 in each of the five-year periods 1951-56 and 1956-61. British Columbia gained through migration at the rate of about 23,000 a year during the 1940's, about 27,000 a year in the first half of the 1950's and 21,000 annually in the 1956-61 period. On an absolute basis, Ontario received more people through migration than did British Columbia but, in relation to its larger population, the gain was only about one third as important. Most of Ontario's growth through migration was from immigration rather than interprovincial movement of population. Quebec had a slight loss between 1941 and 1951 and a considerable gain in the next ten years, due also to immigration. The Maritimes as a whole lost 175,000 persons over the quarter-century.

MOBILITY OF CANADA'S POPULATION, 1956-1961*

Spatial mobility of people within the national boundaries is one of the basic factors in changing the size of local populations. In areas of major in-migration or out-migration it is likely to alter their population structure as well, since migration tends to be highly selective with respect to certain characteristics of individuals and families involved. Unattached young adults, for example, are likely to be more foot-loose than middle-aged family heads assuming heavy responsibilities both at home and at work. Changes generated by migration in a local population, in turn, will have compounded effects on its future trends by either accelerating or decelerating population growth and structural change. In communities that have been subject to a large influx of young adults, growth dynamics will be strengthened; in communities of origin of young migrants the process of aging and slackening of population growth will be likely to set in. Furthermore, both the immediate and long-range demographic changes set forth by migration will have far-reaching social and economic repercussions. Service demands, housing needs, labour

* Prepared by Miss Y. Kasahara, Central Research and Development Staff, Dominion Bureau of Statistics.

supply and diverse other facets of community life will undergo changes at both the sending and the receiving ends of migration streams. Migration may also create social problems or stimulate fundamental changes in the social and cultural context of community life.

Until recently, paucity of pertinent data on migration in Canada has deterred the progress of research on this phenomenon. With the exception of information collected in the 1941 Census, in fact, no direct data on movement of Canada's population were in existence. Even the 1941 Census data, moreover, are not sufficiently comprehensive to permit intensive analysis. Estimates derived from a 20-p.c. sample of private households in the 1961 Census thus represent a significant landmark in the study of population mobility in Canada. The data provide detailed information on migration over the 1956-1961 period, including mobility status of Canada's population, the magnitude and direction of migration streams, the types of movement, the types of areas of origin and destination of migrants, and characteristics of both migrant and non-migrant population. Related to other facts during this five-year period, these time-oriented data also permit some appraisal of the social and economic 'determinants and consequences' of migration.

Questions on mobility status were asked of all persons 15 years of age or over in each private household in the sample. Mobility status of persons five to 14 years of age as of the 1961 Census date was assumed to be the same as that of the family head. Persons under five years of age—those born since June 1, 1956—were excluded, since migration in this Census was measured in terms of the place of residence on June 1 in 1956 and 1961. Estimates derived thus represent only the population five years of age or over who resided in private households in Canada in the 1961 Census. Persons in collective-type households, such as institutions, hotels and large lodging houses, are not included.*

Concepts and Definitions

Mobility, as used here, refers to spatial or geographic movement. It is to be distinguished from 'social mobility' which refers to a change in socio-economic status. Spatial mobility often precedes or follows social mobility, but not always.

Movement could take place from one apartment to another in the same house or it could span across the country from Newfoundland to British Columbia. Obviously, not all movements may be considered as migratory. Movement within the same neighbourhood, for example, which introduces no fundamental change into the established order of individual and collective life, is not migratory. Long-distance movement, which is likely to involve significant changes in the life conditions of movers as well as in the context of community life, is generally regarded as migratory. Theoretically, however, it is difficult to draw a clear-cut line between 'migratory' and 'non-migratory' movements. In the first place, distance travelled in spatial mobility is on a continuum; where to place a cutting point for separating migrants from non-migratory movers thus becomes inevitably a matter of more or less arbitrary choice. In the second place, although distance of movement is in general associated with the extent of change to be introduced into the life of the individual mover or of the community, the association does not always hold true. Furthermore, these and other conceptual problems are intertwined with various difficulties involved in the measurement of migration. Migration, therefore, has to be defined on an 'operational' basis by imposing some boundary lines to be crossed and a degree of permanence in a shift in residence to be established before a movement may be counted as a case of migration.

In the 1961 Census, migration was defined as a change in the usual place of residence across the municipal boundaries and was measured on the basis of the reported place of residence on June 1 in 1956 and in 1961. Movers within the same municipality constituted a special category but were not treated as migrants. The municipality was chosen as the smallest unit of area for defining migration primarily for the following two reasons: (1) that respondents could report on their past usual place of residence with a reasonably

* More details about the sampling and estimation procedures adopted are given in the Introduction to the *1961 Census of Canada Report, Vol. IV.*

satisfactory degree of accuracy; and (2) that most intermunicipal movers are likely to undergo changes in their community ties and living arrangements. This approach is admittedly arbitrary and is subject to its inherent limitations. Some intermunicipal movers (e.g., migrants between Rockcliffe Park and the east end of the city of Ottawa) may well be shorter-distance movers than some intramunicipal movers (e.g., movers from one end of a large metropolitan city to its other end). So long as area boundaries are used as a basis for distinguishing between migratory and non-migratory movement, this type of problem is unavoidable.

Mobility Status and Type of Movement.—In the 1961 Census, the population was divided into the following categories according to mobility status and type of movement: non-movers—persons who resided in the same dwelling on June 1 in both 1956 and 1961; intramunicipal movers—persons who lived in one dwelling on June 1, 1956, but in another within the same municipality five years later; intraprovincial migrants—persons who lived in a given municipality on June 1, 1956, but in another municipality within the same province five years later; interprovincial migrants between contiguous provinces and between non-contiguous provinces; and migrants from abroad—both Canadian-born and foreign-born. These categories were adopted as rough approximations to a scale of distance of movement spanned. Obviously, the same type of problem as is associated with the definition of migration is involved in this scale. Some interprovincial migrants, for example, may have crossed only a boundary road, while some intraprovincial migrants may have travelled hundreds of miles. On the average, however, distance of movement increases as we go down the list.

Gross and Net Migration.—The total number of migrants into an area and the total number of migrants out of an area both represent gross migration. The first group is defined as in-migration and the second group as out-migration, so long as movement took place within Canada. The balance between the two represents net migration, which may be either net in-migration or net out-migration.

It should be noted, however, that the figure for gross movement falls short of the total number of moves made during the 1956-1961 period because of (1) deaths of movers prior to the 1961 Census and (2) persons who moved more than once over the period, since only one move could be counted in the Census. (In fact, those who returned to their original residence before June 1, 1961 would be in the category of non-movers, since mobility status was measured in terms of the usual place of residence on June 1 in 1956 and in 1961.)

Basic Findings*

Mobility Status of Canada's Population, 1956-1961.—Of the estimated 15,300,000 persons five years of age or over residing in private households in Canada at the time of the 1961 Census, 6,500,000 or 42 p.c. changed their usual place of residence within Canada at least once over the preceding five-year period. Nearly 60 p.c. of these proved to be movers within the same municipality. To put it differently, one out of every four residents in Canada in 1961 was an intramunicipal mover during the five-year period 1956-1961. Of the remaining 40 p.c. of the internal movers, four fifths moved from one municipality to another within the same province, and only one fifth crossed the provincial boundaries. An overwhelming majority of movers in Canada during this period thus appear to have been short-distance movers.

Urban-Rural Differences in Mobility Status.—The dominance of short-distance movers prevailed for all types of communities. The mobility rate, or the number of movers of a given type per 100 population, shows a consistent drop from one category of

* Only a brief summary of the basic findings on the mobility of the total population five years of age or over is presented here. A more detailed analysis is given in a chapter on "Mobility of Population in Canada, 1956-1961," in the *General Review, the 1961 Census of Canada Report, Vol. VII*, and in a forthcoming census monograph on this subject.

movers to another as we go down the list given in Table I, regardless of the type of area involved. The impact of mobility on local communities, however, varied significantly among different types of area.

The urban centres contained a much higher proportion of mobile population than the remainder of the country, indicating the ratio of one mover to every two residents. As expected from housing developments, rapid changes in land use and other primarily urban conditions favouring internal mobility, the intramunicipal mobility of the urban population was significantly higher than that of the rural population. Almost one out of every three urban residents in 1961 had moved within the same municipality during the preceding five years. This was nearly double the corresponding rate for the rural non-farm population and four times as high as that for the rural farm population. The urban inter-provincial in-migration rate was also highest, although its difference from the corresponding rural non-farm rate was only slight. The impact of intraprovincial migration, on the other hand, was strongest on the rural non-farm population, over 45 p.c. of the total internal movers falling in this category. Mobility among the urban population thus represented primarily intramunicipal movement and only secondarily in-migration from different municipalities, while mobility among the rural non-farm population was mainly a function of in-migration. Judged from the mobility status of the residents in 1961, the rural farm population was the most stable; more than 80 p.c. reported the same place of residence for 1956 and 1961.

I.—MOBILITY STATUS OF URBAN, RURAL NON-FARM, RURAL FARM AND TOTAL POPULATION, FIVE YEARS OF AGE OR OVER, BY TYPE OF MOVEMENT, 1961

Provincial Differences in Mobility Status.—The over-all mobility status of provincial populations differed significantly by their geographic location. In general, the total mobility rate becomes higher moving across the country from the Atlantic to the Pacific Coast—from 27 p.c. in Newfoundland to almost 49 p.c. in Alberta and British Columbia. The rates for these two western provinces were, in fact, appreciably higher than the rate for Ontario—the most urbanized province in the country. The only significant deviation from this general pattern of increasing mobility from east to west was Saskatchewan. The mobility rates by type of movement, however, did not show such a consistent pattern. The intramunicipal mobility rate was highest in Quebec, followed by Alberta, Ontario and British Columbia in that order. In general, however, the lower rates prevailed in the more rural provinces, while the more urbanized provinces tended to evince intensive intramunicipal mobility. The intraprovincial mobility rate also indicated a more or less direct correlation with the degree of urbanization, with British Columbia leading the other provinces and Newfoundland standing at the bottom of the scale. The

interprovincial in-migration rate was highest in Alberta, with British Columbia following close behind. These two western provinces appear to have been the major centres of attraction to relatively long-distance migrants during this period. In absolute terms, the total interprovincial migrants to Alberta amounted to approximately 80,000 and those to British Columbia nearly 90,000. Surprisingly, the share of interprovincial migration for Ontario was smaller than its degree of industrial urbanization or its strategic location suggested, although the total number of migrants in this category for the province exceeded 150,000—the largest in the country. Quebec, which has traditionally demonstrated a unique pattern of development in many of its demographic features, scored the lowest interprovincial in-migration rate—lower even than that of Newfoundland.

Urban-Rural Differences in Gross and Net Migration.—The mobility rate examined above reveals the extent of intramunicipal mobility and in-migration to a given type of community. The effect of out-migration, however, is not evident in this measure; it is only indirectly reflected in the size of the base population. In order to assess the total impact of mobility on a given population, therefore, the two opposing streams of migration as well as their net balance must be examined.

The urban centres during the 1956-1961 period were exposed to strong cross-currents of migration. In every size group of urban areas a high in-migration rate was matched by a correspondingly high out-migration rate. In the absolute volume of in- and out-migration, the largest urban centres with 100,000 or more population overshadowed the others, absorbing over 1,100,000 migrants and sending out almost as many.* The intensity of both streams of migration, however, was greatest among the smallest centres under 10,000 population, while the urban areas between 30,000 and 100,000 population proved to be somewhat more stable than others. If the largest urban communities representing most of the census metropolitan centres are excluded, the migration rate or the impact of migration on a given local population appears to have been inversely correlated with its size.

Contrary to expectations, the effect of the two counteracting streams of migration on the urban population as a whole was a slight net loss.† Although the larger urban centres with 30,000 or more population gained some population through migration (intra- and interprovincial migration combined), the gain for this group was too small to cancel

* These figures include the migrants from one urban centre of 100,000 or over to another in the same size group.

† Exclusion of the residents in collective-type households from the sample universe may well have resulted in an understatement of in-migration to urban centres, since this group with the majority living in urban centres is likely to have contained a larger proportion of highly mobile population than the residents in private households. Even after an allowance is made for the possible understatement of urban in-migration, however, the general pattern remains unchanged.

out the net out-migration from the smaller centres. For the urban centres with less than 30,000 population the total out-migration rate amounted to 25 p.c., while the total in-migration rate was approximately 20 p.c.* The resulting net out-migration thus came to one loss for every 20 residents of these smaller urban centres in 1961.

III.—GROSS AND NET MIGRATION RATES¹ OF POPULATION FIVE YEARS OF AGE OR OVER,
BY TYPE OF MIGRATION AND TYPE OF AREA, 1956-1961

Type of Area	Intraprovincial Migration			Interprovincial Migration

Non-farm.....	18.5	8.4	10.1	2.6	1.1	2.5
Farm.....	7.2	19.6	-12.4	1.0	4.3	-3.3

¹ The base population excludes those movers who did not report their place of residence in 1956. The migrants from rural areas who did not state the type of rural residence in 1956 are distributed into rural non-farm and farm categories according to the reported distribution.

As will be discussed below, the majority of urban migrants were interurban movers, generating population shifts among individual urban centres alone. It should be noted, however, that the net interchange of population between urban and rural non-farm communities during this period was invariably in favour of the latter, regardless of the size of the urban areas involved. Some net migration gain witnessed among the larger urban centres, in fact, represented a balance between a net gain from smaller urban centres and rural farms on one hand and a net loss to rural non-farm communities on the other. The smaller urban centres suffered a net loss due to out-migration to rural non-farm communities as well as a drain toward larger urban centres, despite a sizable in-migration of rural farm population.

The counterpart of this picture is revealed in the migration rates for the rural non-farm population. The total in-migration rate here, heavily weighted by a very high intra-provincial in-migration, was higher than in any other type of area in the country. Coupled with the lowest total out-migration rate, this yielded the highest net migration rate for the rural non-farm population; the ratio of net gain to the total resident population in 1961 was almost as high as 13 p.c. Furthermore, approximately two thirds of its total gain represented the net in-migration from urban centres and the remaining one third the net in-migration from farms.

The rural farm population, on the other hand, indicated a pattern almost diametrically opposite to that of the rural non-farm population, combining the lowest in-migration rate and nearly as high an out-migration rate as the smaller urban centres. If judged from the intramunicipal mobility and in-migration rates, the rural farm population appeared to be the most stable. In the light of the out-migration rate, it was among the most mobile. The consequent net out-migration rate proved to be by far the highest in the country; for every 100 rural farm residents in 1961 there was a net loss of nearly 16 due to migration. About 60 p.c. of the exodus from rural farms was toward urban centres. For the urban centres, however, this farm-to-city stream was a relatively small portion of their over-all mobility; it constituted less than 12 p.c. of the total migrants residing in urban centres in 1961.

* The total in-migration (or out-migration) rate refers to the sum of intraprovincial and interprovincial in-migrants (or out-migrants) per 100 resident population in 1961.

In the earlier periods when Canada was undergoing the initial stage of intensive industrial urbanization, the major stream of migration appears to have been from the countryside to the city. The technological revolution in agriculture tended to operate as a compulsive force to stimulate out-migration of rural farm population, while industrial centres beckoned rural youth with superior employment opportunities and amenities of urban life. This phenomenon may be regarded as an ecological process of adjustment of local populations to the changing social and economic order of the country. At the places of origin it may be looked upon as a major force to transform their population dynamics or as a drain on their economically productive resources. At the places of destination, it may be viewed as a problem of social adjustment, or as a generator of social and economic change. Migration from farms to cities has thus been a focus of interest and concern for a long time. Now that the majority of Canada's population is urban, however, it is expected that the major stream of migration should be interurban. Although farm-to-city movement has persisted, its relative importance in the total migration in Canada has diminished.

Of the 2,600,000 migrants within Canada over the 1956-1961 period, the share of urbanward migrants from farms was less than 9 p.c. The total number of interurban migrants, on the other hand, approached 1,500,000 or 57 p.c. of the total migration. Among these interurban migrants, the predominant pattern was the movement to communities of more or less the same size as their previous place of residence or to larger centres. Less than 20 p.c. moved to smaller places. Another notable feature of migration flow during this period was an apparently growing propensity of urban population to move away from the city. This tendency is indicated in the volume of migratory flow from urban to rural non-farm communities; nearly 15 p.c. of the total migrants in Canada were in this category. Among those migrants who resided in urban areas in 1956, almost 20 p.c. reported their residence in 1961 in rural non-farm communities. Apparently, this is a reflection of the progress of extensive suburbanization during this period. It appears that the suburban sprawl was not confined within the urban fringe of the large metropolitan centres,* but has been extending beyond the urban boundaries as defined in the census. Judged from the figures of interchange of population between different urban size groups and rural non-farm communities, moreover, suburban development seems to have been progressing at a brisk pace not only around the large metropolitan centres but also in areas surrounding the smaller urban centres.

Provincial Differences in Gross and Net Migration.†—The rate of in-migration across the provincial boundaries was highest in Alberta, closely followed by British Columbia. Nearly 170,000 or 32 p.c. of the total interprovincial migrants five years of age or over were divided between these two western provinces, slightly in favour of British Columbia. Although the absolute gain due to in-migration to Ontario, exceeding 150,000, was the largest in the country and the corresponding figure for Quebec approached 70,000, these two most urbanized provinces showed the lowest in-migration rate during this period with the exception of Newfoundland. Among the other provinces, the differences in the in-migration rate were quite small.

* An analysis of the process of suburbanization around the metropolitan cities is the subject of a chapter in a forthcoming census monograph, *Mobility of Canada's Population, 1956-1961*.

† The Yukon and Northwest Territories are included in the following tables but are excluded from the textual analysis.

The out-migration rate was highest in Saskatchewan and lowest in Quebec. Ontario and Newfoundland, which showed relatively low in-migration rates, stood in the lower range of the scale in the out-migration as well. Alberta and British Columbia, which were exposed to intensive in-migration during this period, indicated the out-migration rate in the medium range; all other provinces fell between these two provinces and Saskatchewan in this score. In general, the provinces with a low in-migration rate were low in the out-migration rate as well, and the provinces with a high in-migration rate tended to be subject to a moderately high out-migration rate. Other provinces which showed a relatively high in-migration rate, on the other hand, were subjected to a considerably higher out-migration rate.

In net terms, British Columbia, which combined a high in-migration rate with a moderate out-migration rate, showed the highest relative gain. Alberta, whose in-migration rate was the highest in the country, stood second in this respect because of a somewhat higher out-migration rate than British Columbia. Ontario also gained slightly through interprovincial migration, although it showed low rates in both in-migration and out-migration. All other provinces suffered a slight net loss.

IV.—GROSS AND NET INTERPROVINCIAL MIGRATION RATES OF POPULATION FIVE YEARS OF AGE OR OVER, FOR THE PROVINCES AND TERRITORIES, 1956-1961

¹ Excludes those who did not report their usual place of residence in 1956.

The net gain for the two western provinces of British Columbia and Alberta stemmed primarily from Saskatchewan. Although the absolute volume of outflow from Alberta to British Columbia was much larger than that from Saskatchewan, the net effectiveness of migration from Alberta to British Columbia was reduced substantially by a sizable counter-flow. Ontario, the third gaining province, received most migrants from Quebec, although it was also a major source of migrants to Quebec. The prevailing picture for the gaining provinces was thus the dominance of the contribution made by migrants from neighbouring

provinces in their net gain. For the losing provinces, in general, Ontario emerged not only as the major centre of attraction to their out-migrants but also as the major supply area of migrants. Regardless of the geographic location of a given province, the strong influence of Ontario in this respect persisted. The only exception to this general pattern was Saskatchewan, which interchanged population primarily with Alberta and British Columbia.

Conclusion.—The above analysis of the mobility pattern in Canada over the 1956-1961 period dealing with the mobility status and direction of movement of the total population alone scratches only the surface of a mine of data collected in the 1961 Census. A sketch drawn with a broad brush cannot even suggest the total complexity of the effects of selectivity involved in migration upon the structure of local populations and the social and economic contexts of different types of communities. Intensive research is required to point up the full implications of migration for demographic change and potential transformation of the social and economic order of the nation as well as of local communities to be attributable to spatial movement of population.

Subsection 2.—Density of Population

Table 4 shows the density of population in the different provinces and territories of Canada in the census years 1951, 1956 and 1961. Omitting the Yukon and Northwest Territories where population density is exceedingly low, there were 8.66 persons per square mile in Canada as a whole in 1961 compared with 6.65 per square mile in 1951. The greatest increase in the ten years was shown by Ontario where there were 4.76 more persons per square mile, followed by Nova Scotia with an increase of 4.62. However, it should be remembered that all provinces with the exception of the Maritimes have large areas almost devoid of population and that concentrations in other areas are very high.

4.—Land Area and Density of Population, by Province, Census Years 1951, 1956 and 1961

Province or Territory	Land Area	Population 1951		Population 1956		Population 1961

Fringe area.....	90,431	2,475	161,544	558

Subsection 3.—Rural and Urban Population

For the 1961 Census, all cities, towns and villages of 1,000 or more population, whether incorporated or not, were classed as urban; also classed as urban were the urbanized fringes of census metropolitan and other large urban areas, and the urbanized fringes of certain smaller cities where the city and fringe totalled 10,000 or more persons. The remainder of the population was classed as rural.

Table 5 classifies the 1961 rural population according to farm and non-farm residence and the urban population by size groups; in the latter classification, each municipality (or part) in an urbanized area is allocated to the same size group as the total urbanized area of which it forms a part. The figures show that, in 1961, almost 70 p.c. of Canada's population were urban dwellers and 53 p.c. lived in or on the fringes of urban centres having a population of 30,000 or more. Only about 12 p.c. lived on farms.

5.—Rural Population classified as Farm and Non-farm, and Urban Population classified by Size Group, by Province, Census 1961

Province or Territory	Rural			Urban				
	Farm ¹	Non-farm	Total	1,000 to 9,999	10,000 to 29,999	30,000 to 99,999	100,000 or Over	Total

¹ Excludes 55,615 persons living on farms in localities classed as urban.

Subsection 4.—Populations of Incorporated Cities, Towns and Villages and of Metropolitan Areas

The population of all incorporated cities, towns and villages is classified by size group in Table 6 for the census years 1951, 1956 and 1961. During the ten-year period, the number of such centres increased by 178 and the proportion of the total population living in them rose from 56.7 p.c. to 60.7 p.c. Although there was a slight decrease in the number of centres having fewer than 1,000 persons, the number with over 50,000 increased from 19 to 29 and the proportion of the total population in these larger centres went up from 27.5 p.c. to 29.0 p.c.; the proportion in centres of from 1,000 to 50,000 increased from 26.1 p.c. to 29.3 p.c. in the same comparison.

Census metropolitan areas have been established for groups of urban communities that are in close economic, geographic and social relationship. Table 8 shows the 1961 population of each area with the corresponding 1951 and 1956 figures for the same area as in 1961. As indicated by the last column, most of these metropolitan areas have shown remarkable increases in population during the decade. In 1961 they accounted for 44.8 p.c. of the total population as compared with 40.2 p.c. in 1951.

The 922 incorporated urban centres in Canada having a population of 1,000 or more at the time of the 1961 Census are listed alphabetically by province in Table 9 and their populations given for the two census years 1956 and 1961. Each population figure is for the boundary in effect at the time of the respective census.

9.—Incorporated Cities, Towns and Villages having Populations of 1,000 or Over in 1961, by Province, Census Years 1956 and 1961

NOTE.—Population totals are based on areas as incorporated at each of these dates; a change in municipal boundary since the preceding census is indicated by an asterisk (*). Urban centres are designated in this table by the following abbreviations: c.=city, t.=town, and v.=village.

¹ Incorporated after June 1, 1956.

² Includes residents of the Nova Scotia Sanatorium located outside the town limits, numbering 435.

³ Amalgamation of the towns of L'Abord & Plouffe, St. Martin and the rural municipality of St. Martin (Renaud).

⁴ Brockville became a city on Apr. 1, 1962.

⁵ Eastview became a city on Jan. 1, 1963.

⁶ Kemptville became a town on Jan. 1, 1963.

⁷ See Manitoba.

⁸ See Saskatchewan.

Subsection 5.—Sex and Age Distribution

The sex and age distributions of a population are basic to most, if not all, other analyses, as they influence employment, marriage, birth and death rates and a multitude of other factors that are of great importance in the national life.

Sex.—The Canadian population has always been characterized by an excess of males, although this excess has been greatly modified in recent years. Since Confederation, the peak sex ratio for Canada as a whole was 113 reached in 1911, a census year that fell within a period of heavy immigration; the 1961 ratio was 102. In the older settled provinces east of Manitoba, the ratio varied between 104 in 1911 and 101 in 1961 but in the western provinces which were being opened to settlement in the early years of the century the ratio changed from a high of 146 in 1911 to 105 in 1961.

The sex distributions and variations in ratio among the provinces are given for the census years 1951, 1956 and 1961 in Table 10.

Age.—Recent trends in vital rates and immigration have had a considerable effect on the age composition of the Canadian people. A high birth rate together with a low death rate among children added nearly 2,000,000 to the number of persons under 15 years of age between 1951 and 1961, an increase of 46 p.c. The proportion of this group to the total population increased from 30.3 p.c. to 34.0 p.c. in the ten-year period. The population of working age—those of 15 to 64 years of age—increased more slowly at 22.9 p.c. in the decade and the relative proportion of this group declined from 61.9 p.c. to 58.4 p.c. Without the influence of immigration in the 1951-61 period, the proportion of this group would have been much lower since a large part of it consisted of persons born in the low birth rate period of the 1930's. The proportion of persons 65 years of age or over in 1961 was 7.6 p.c. compared with 7.8 p.c. in 1951.

Table 11 shows the population of Canada classified by five-year age groups and by sex for the census years 1951, 1956 and 1961. The provincial distribution by specified age group is given for 1961 in Table 12.

Subsection 6.—Marital Status

After age and sex, marital status analysis is probably next in importance from a vital, economic and social viewpoint. The number of married females between 15 and 45 years of age is a most significant factor in the fertility of a population. If the proportion of females in this group is low, the expected birth rate will be low. In 1961, 62.9 p.c. of all married females were in the 15-44 age group compared with 64.0 p.c. in 1951, 61.2 p.c. in 1941 and 63.5 p.c. in 1931.

The high birth rate in the 1951-61 period, besides having a notable effect on the general population growth and age composition, has been an influence on the 32.7-p.c. increase in the single population. During the same period, the married population increased by 28.2 p.c. and the widowed by 21.0 p.c. Other striking features are the excess of married males (largely consisting of male immigrants whose wives had not yet joined them) and the great preponderance of widows over widowers.

The marital status of the population in 1961 is shown in Table 13.

Subsection 7.—Ethnic Groups and Birthplaces

Ethnic Group.—A population made up of diverse ethnic groups gives rise to political, social and economic problems quite different in nature from those of one with a more homogeneous ethnic composition. These problems are mitigated, however, to the extent

that certain groups are more easily integrated than others. It is equally true that the different backgrounds of various ethnic groups lend variety and diversity to the national life.

The two basic groups in the Canadian population are the French and British Isles ethnic groups. The influence of the French in Canada covers a longer period and, with the exception of the 1921 Census, this group has always exceeded in number any of the components of the British Isles ethnic group.

In 1961, each person was asked the question: "To what ethnic or cultural group did you or your ancestor (on the male side) belong on coming to this Continent?". The language spoken at the time by the person, or his paternal ancestor, was used as an aid in determining the person's ethnic group. The classification is given for 1961 in Table 14 with comparative figures for 1951 and 1941. Information on ethnic group was not collected in the 1956 Census.

¹ Includes persons born in Canada whose province of birth was not stated.

Subsection 8.—Religious Denominations

In the 1961 Census, enumerators were instructed to record the specific religious body, denomination, sect or community reported in answer to the question: "What is your religion?". Thus it should be noted that census figures do not measure church membership or indicate the degree of affiliation with any religious body. As shown in Table 17, close to eight out of ten persons in Canada stated that they belonged to one of the three numerically largest denominations—Roman Catholic, United Church and Anglican—in 1961. The table gives comparative figures for the census years 1941 and 1951; this information was not collected in the 1956 Census.

17.—Principal Religious Denominations of the Population, Census Years 1941, 1951 and 1961

Religious Denomination	1941	1951	1961

¹ Includes "Hutterites".

² Includes "Other Greek Catholic".

³ Exclusive of Newfoundland.

Subsection 9.—Languages and Mother Tongues

The term "official language" used by the census refers only to the English and French languages.* "Mother tongue" is the language a person first learned in childhood and still understands. It should be noted that persons indicated as speaking "English only" or "French only" with respect to official language may also speak other languages and have a mother tongue other than English or French. The use of the English and French languages in Canada at the time of the 1961 Census is discussed in a special article appearing in the 1965 Year Book at pp. 180-184. Table 18 gives the numerical and percentage distribution of official language by province.

* The British North America Act, 1867 (Sect. 133) makes provision for the use of the English and French languages as follows:—

"Either the English or the French Language may be used by any Person in the Debates of the Houses of the Parliament of Canada and of the Houses of the Legislature of Quebec; and both those Languages shall be used in the respective Records and Journals of those Houses; and either of those Languages may be used by any Person or in any Pleading or Process in or issuing from any Court of Canada established under this Act, and in or from all or any of the Courts of Quebec.

The Acts of the Parliament of Canada and of the Legislature of Quebec shall be printed and published in both those Languages."

18.—Numerical and Percentage Distribution of the Population Speaking One, Both or Neither of the "Official" Languages, by Province, Census 1961

NOTE.—See text and footnote above *re* the term "official language".

Subsection 10.—Households and Families

This Subsection contains limited statistics on households and families recorded at the 1961 Census; more detailed information may be found in 1961 Census reports relating to households and families (see also p. 176).

A household, as defined in the census, consists of a person or a group of persons occupying one dwelling.* It usually consists of a family with or without lodgers, employees, etc. However, it may consist of a group of unrelated persons, of two or more families sharing a dwelling, or of one person living alone. Every person is a member of some household and the number of households equals the number of occupied dwellings.

The total number and the average size of households are given by province for the census years 1951, 1956 and 1961 in Table 20. The relatively stable average of persons per household indicates an almost equal rate of increase for the dwelling stock as for the population.

* A dwelling is defined as a structurally separate set of living quarters, with a private entrance either from outside the building or from a common hall, lobby, vestibule or stairway inside. The entrance must not be through another person's living quarters.

20. Households and Persons per Household, by Province, Census Years 1951, 1956 and 1961

Province or Territory	Households			Average Persons per Household

¹ Exclusive of the Yukon and Northwest Territories.

The average size of the Canadian family* made a further gain between 1956 and 1961, continuing the trend of the 1951-56 period. Every province except Quebec and Saskatchewan participated in this increase, as shown in Table 21.

21.—Families and Persons per Family, by Province, Census Years 1951, 1956 and 1961

Canada.....	3,287,384	3,711,500	4,147,444	3.7	3.8	3.9

Closely related to the number of families per household, and also an indicator of living conditions, is the type of family. In 1961, 94.3 out of every 100 families in Canada were maintaining their own households as compared with 92.3 in 1956 and 90.2 in 1951, an apparent steady improvement in living conditions. The families not maintaining their own households fell into two main sub-categories—families related to the head of the household and non-related lodging families. The few who did not fit either of these sub-categories were mostly families of employees living in their employer's household.

There were 7,777,137 children in families in 1961. These are limited by definition to children never married and under 25 years of age who were living with their parents or guardians at the time of the census. In Table 22, the number of children is classified to show the number in each of four separate age groups corresponding roughly to pre-school-age children, those of elementary school age, those at the secondary school level, and those of college or working age.

* A family, as defined in the census, consists of a husband and wife (with or without children who have never married) or a parent with one or more children never married, living together in the same dwelling. Adopted children and stepchildren are counted as own children and, in fact, a family may comprise a man or woman living with a guardianship child or ward under 21 years of age.

22.—Children Living at Home classified by Age Group and by Province, Census 1961

Additional household and family classifications are given in the 1963-64 Year Book at pp. 180-181—families classified by age of head, and families classified by marital status and sex of family head; and in the 1965 Year Book at pp. 185-186—households classified by number of persons, households classified by number of families and by number of lodgers, and families classified by type and by province.

Section 2.—Intercensal Surveys

Intercensal estimates of the population of Canada and of the provinces have many uses. They are necessary to the calculation of costs of certain economic and social legislation. Business, educational and welfare organizations utilize population estimates in planning future development. They constitute a base for vital statistics rates, per capita figures of production and trade, and other analyses. They also have been found useful for estimating labour force and other population characteristics of data collected in sample surveys.

Estimates are constructed for the total population of Canada and for each province and become available about the date to which they apply—June 1 of each year. Population estimates by province are also available on a quarter-year basis. The estimates of population begin with the preceding census counts, to which are added the births of the intervening census year or years and from which the deaths are subtracted; immigrants are added and emigrants subtracted. No complete information is available on emigration. The DBS receives yearly from the United States the number of persons who gave Canada as country of last permanent residence before entering the United States as immigrants (see Chapter on Immigration and Citizenship, Part I, Section 3) and from the Registrar-General of Britain the number of emigrants from Canada arriving by sea to take up permanent residence in that country. Such data, however, are not available from other countries but, as indicated by partial data from United Nations sources, the proportion of total emigrants to all other countries is small. Family allowances statistics showing the number of migrant families by province are used in estimating interprovincial shifts in population (see Table 3, p. 179).

The following statement shows the data used in preparing the revised population estimates for the years 1957 to 1960 and the annual estimates for 1962 to 1965. The next succeeding census serves as a basis for revision of the annual estimates of each intercensal period.

² Mainly

23.—Annual Estimates of Population, by Province, as at June 1, 1951-65

NOTE.—At every census the previous post-censal estimates, made at June 1 each year, are adjusted to the newly recorded population figures. Figures for 1951, 1956 and 1961 are census figures. Figures for 1867-1904 will be found in the 1936 Year Book, p. 141; for 1905-30 in the 1946 edition, p. 127; for 1931-40 in the 1952-53 edition, p. 143; and for 1941-50 in the 1961 edition, p. 165. Figures for 1867-1951 will also be found in *Census of Canada 1961*, Vol. X.

Because of the growing interest in the expanding population of the larger metropolitan areas of Canada, estimates for these areas have been prepared as of June 1, 1964. These are shown in Table 24 with the census counts for June 1, 1961; the estimates relate to the boundaries established for the 1961 Census. As in the preparation of intercensal population estimates for provinces, the births occurring in the metropolitan areas between June 1, 1961 and June 1, 1964 were added to the population at the census date, and deaths subtracted. Immigrants over this period reporting these metropolitan areas as places of destination were added and allowances were made for losses in population by emigration. Also, the net in-movement or out-movement caused by internal migration was calculated from family allowances and other data.

The falling off in the rate of population growth for the whole of Canada between June 1, 1961 and June 1, 1964, caused by declining immigration and a slight fall in the birth rate, is also reflected in the growth rate for the metropolitan areas.

24.—Estimated Population of Major Metropolitan Areas¹ as at June 1, 1964, compared with 1961 Census

¹ With 100,000 or more population in the city proper at the 1961 Census.² Areas as of the 1961 Census.

Table 25 gives estimates of the population of Canada and the provinces by age group and sex as at June 1, 1964. The method followed in preparing these estimates was much the same as that used in calculating the population estimates, described on p. 206. These estimates are subject to revision as soon as data from the next census are available.

Section 3.—The Native Peoples of Canada

The Indians*

More than 210,000 Canadians are registered as Indians by the Department of Citizenship and Immigration. Registered Indians include all persons descended in the male line from a paternal ancestor of Indian identity, who have chosen to remain under Indian legislation. They are grouped, for the most part, into 558 bands and occupy or have access to 2,267 reserves or settlements having a total area of 5,975,647 acres.

26.—Indian Land in Reserves and Number of Bands, by Province, as at Mar. 31, 1965

Province or Territory	Bands	Reserves ¹	Total Area
	No.	No.	acres

Northwest Territories.....	16	28(28)	2,107
Totals.....	558	2,267(74)	5,975,647

¹ Figures in parentheses indicate the number of Indian settlements, which are not officially reserves, included in the totals.

Some 26 p.c. of the registered Indians reside away from reserves. This portion includes those in the Yukon and Northwest Territories, for whom reserves have not been set aside. Many Indians, both on and off reserves, have specialized in various professions, trades and agricultural pursuits and others have found employment in a wide range of occupations and fitted into the economy of the areas in which they live. Some 290 Indians are employed by the Indian Affairs Branch of the Department of Citizenship and Immigration, 109 of them as teachers. In the northern and other outlying areas, hunting, fishing and trapping remain an important means of livelihood for Indians.

Apart from special provisions in the Indian Act, Indians are subject to all laws of general application. They are liable for taxation of property held off a reserve and for any income they earn off a reserve. They may vote in federal elections on the same basis as other citizens and in provincial elections where the electoral laws of the province permit. Indians are free to enter into contractual obligations and may sue and be sued. However, their real and personal property situated on a reserve is exempt from seizure except on suit by another Indian.

A Departmental census of Indian population is taken every five years and the numbers recorded at the three latest censuses—1949, 1954 and 1959—are given in Table 27; the figures for 1960-64 are taken from band membership lists kept for administrative purposes by the Indian Affairs Branch.

* Revised in the Information Division, Department of Citizenship and Immigration, Ottawa.

¹ As at Dec. 31.

The Indian population in each province is classified by age group and sex in Table 28. The rapid growth of that population in recent years is indicated by the fact that in 1964 approximately 58 p.c. of the Indians were under 21 years of age compared with 42 p.c. of the population of Canada as a whole. Religious denominations of the Indian population are given in Table 29.

Administration.—Pursuant to the British North America Act, the administration of Indian affairs, which had been under the management of several provinces, came under the jurisdiction of the Government of Canada. Since January 1950, Indian affairs have been the responsibility of a Branch of the Department of Citizenship and Immigration.

The Indian Affairs Branch is composed of a headquarters staff at Ottawa, eight regional offices, two district offices in the Province of Ontario and 87 field agencies. Specialists in such matters as education, economic development, community development, resource management, social welfare, and engineering and construction are attached to headquarters and regional staffs. Liaison is maintained with the Indian and Northern Health Services of the Department of National Health and Welfare, the federal agency concerned with the medical care of Indians (see p. 293).

It is the primary function of the Indian Affairs Branch to administer the affairs of Indians in a manner that will enable them to participate fully in the social and economic life of the country. To this end, the Branch has brought into effect a wide range of programs in the fields of education, economic development, social welfare and community development. Underlying administrative duties of the Branch include the management of Indian reserves and surrendered lands, the administration of band funds, estates management, enfranchisement of Indians and the administration of treaty obligations.

Welfare.—Welfare services and social benefits available to Indians at present include those administered and financed by the Indian Affairs Branch and Indian bands, those developed through co-operative cost-sharing arrangements with provincial, municipal and private organizations, and programs conducted by other federal and provincial government departments.

Indians are eligible for family allowances, youth allowances and old age security administered by the Federal Government, as well as for old age assistance and blind and disabled persons' allowances administered by provincial governments. In the Province of Ontario, Indian women may receive mothers' allowances and assistance to widows and unmarried women on the same basis as non-Indian women; indigent Indian mothers in Quebec are eligible for needy mothers' allowances and upon application abandoned children and adult Indians in Nova Scotia receive certain benefits in accordance with the Nova Scotia Social Assistance Act.

As there is no specific welfare legislation respecting Indians in either the Indian Act or other federal statute, the Indian Affairs Branch must rely upon provincial welfare legislation and upon provincially accredited welfare agencies for the enforcement of such legislation. The Federal Government has negotiated cost-sharing arrangements with various provincial governments and private welfare agencies for the extension of child welfare services and for rehabilitation programs for handicapped Indians. Agreements with the governments of the Yukon Territory, the Northwest Territories, Manitoba, Ontario and Nova Scotia make provision for child welfare services to Indian reserves. In other provinces child welfare services are provided although formal agreements have not been negotiated. The Federal Government assumes responsibility for the maintenance of Indian children under the care and supervision of child welfare agencies (governmental and private); maintenance is paid for children placed in foster homes by Indian Affairs Branch field staff when the service of a child-caring agency is not available and also for children committed by the courts to training schools and correctional institutions.

Care and maintenance in homes for the aged and other institutions are available to physically and socially handicapped adults who need such help because of senility or chronic illness but do not require active medical treatment.

The implementation of a federal-provincial statement of policy on social assistance and health services ensures that Indians living off reserves in British Columbia may secure aid when and where they need help. The Province of British Columbia shares with the Federal Government the costs of two continuing projects in the Prince Rupert and Babine areas designed to study and deal with specific welfare problems of Indians.

About half the Indian population of Ontario (35 Indian bands) assume municipal responsibilities by administering their own programs under the terms of the General Welfare Assistance Act of Ontario. Provincial rehabilitation services are generally extended to handicapped Indians on the same basis as to non-Indians.

When in need, Indians who live on Indian reserves or in recognized Indian communities receive food, fuel, clothing, essential household equipment, shelter and supply and repair of prosthetic equipment from the Indian Affairs Branch. Indians who become stranded away from home in Canada may be given return transportation if they are unemployable or if employment is not available. It is expected that Indians living in non-Indian communities who need aid will be assisted by local municipal or provincial welfare agencies. Claims from such agencies for reimbursement on a charge-back basis are paid if persons so assisted have not established eligibility through residence.

Community Development.—The Indian Affairs Branch conducts a comprehensive community development program which is expected to be a major instrument for improving the economic, social and cultural life of Indians. This involves the use of trained persons to assist Indian groups to gain further skills and interest in dealing with community problems.

Resource and Industrial Development.—Increasing interest in the development of commercial enterprises on Indian reserves has been evident in recent years. In a number of areas, Indian bands have developed portions of their lands to serve as industrial parks. Indians have also shown a growing interest in co-operatives. In March 1965, there were more than 30 co-operatives in which membership was wholly or substantially Indian. Included were producers' co-operatives, mostly engaged in pulpwood cutting and fishing with a few in the handicraft field, as well as consumers' co-operatives and

credit unions. In addition, 20 or more Indian projects, mostly fisheries, were operated on a co-operative basis under Indian Affairs Branch programs, although not formally incorporated.

Placement officers of the Indian Affairs Branch, located at a number of centres across Canada and working in co-operation with the National Employment Service, promote Indian employment in a wide range of occupations. The program includes vocational and trade training. Also, the Indian Affairs Branch has arranged for community organizations to counsel Indians who are becoming established in urban centres outside reserves, and to foster the relocation of Indian families in frontier communities associated with the mining industries, providing counsel and other assistance.

Approximately \$1,210,000 was spent in 1964-65 under the Community Employment Program, which provides employment on reserves through financing projects to develop and improve public assets on the reserves. Indian bands are encouraged to become directly involved in the planning and operation of these projects and thus assume greater responsibility in developing their communities and natural resources.

In the field of renewable natural resources development, some provinces co-operate in programs for Indians under formal agreement; others co-operate informally with the Indian Affairs Branch, with similar results. Although fur prices declined somewhat in 1964, a trend toward a return to trapping in isolated areas continued. Participation by Indians in inland fisheries has expanded steadily in recent years and it is estimated that the total Indian commercial production from all inland waters was about 20,000,000 lb. during the 1964-65 season, with an equal amount for domestic consumption. Forestry operations on the reserves and in areas adjacent to the reserves provide considerable employment for Indians, who produce about 90 p.c. of the annual reserve cut. The sale of forest products from reserves during 1964-65 totalled approximately \$10,000,000 and band funds were enriched by about \$1,000,000 from timber dues. Indians are given assistance in the operation of lumber mills, fence-post peeler and treatment plants, and charcoal kilns; reforestation projects and forest fire-fighting provide further income. The annual revenue to band funds from the exploitation of mineral resources on reserve lands averages about \$2,000,000 a year, most of it from oil and gas resources in Alberta.

In 1964-65, Indians made about \$1,000,000 worth of handicraft items for sale and their own use. Interest in their traditional crafts has been revived and expanding markets have helped to bring about an annual growth of some 17 p.c. in the industry. To encourage this important source of revenue, the Indian Affairs Branch maintains a marketing service and provides basic materials and other types of assistance on a repayable basis.

Indian farmers are eligible for assistance under the Prairie Farm Rehabilitation Act, the Prairie Farm Assistance Act, and other federal statutes of general application. In addition, the Branch provides financial assistance to encourage young Indians to engage in farming and to help those already so engaged. The Branch is prepared to help Indians to finance co-operatives and small businesses when competent management is provided and the Indians concerned are familiar with the business principles and practices involved and have a financial stake in the enterprise.

Education.—This major key to continued Indian progress receives ever-increasing support from Indian parents, from their school committees, from provincial governments, and from professional groups specifically concerned with classroom instruction of Indian pupils. The Indian Affairs Branch maintains and operates a number of schools for Indians, but 22,764 of the 55,475 Indian school population attend provincial schools. Attendance of Indians at provincial schools has been arranged, for the most part, through

agreements between the Branch and individual school boards. In 1964, however, an agreement was concluded with the Province of Manitoba to provide for a uniform tuition fee to be paid by the Branch for Indian pupils attending schools under the jurisdiction of that province. Manitoba also passed legislation to give Indian children the right to attend any provincial school.

There are three types of Indian schools, all operated at the expense of the Federal Government. On many reserves, day schools provide education for children who live at home. Residential schools care for orphaned children, children from broken homes, and for those who, because of isolation or for other reasons, are unable to attend day schools. The third type of school gives instruction to children confined to hospital.

All standard classroom supplies and authorized textbooks are used in Indian schools, which follow generally the curriculum of the province in which they are located. Financial assistance for pupils attending non-Indian schools varies from payment of tuition fees to full maintenance. Promising senior students are awarded scholarships to attend university or vocational school and scholarships are given to those who show promise in the arts.

The Eskimos*

Collectively and as individuals, Canada's 13,600 Eskimos living in the Northwest Territories, northern Quebec and Labrador continued to move ahead in their development from a nomadic way of life to one not too unlike the pattern of living in some areas of Southern Canada. Eskimos are becoming settled in established communities where opportunities are greater for education, health services and employment. In addition to those self-employed as members of co-operatives, Eskimos have jobs in a variety of fields. They work as civil servants and as DEW-line employees. Eskimos are clergymen, aircraft pilots, miners, carpenters, mechanics, diesel and tractor operators and oil drillers. An Eskimo is manager of the CBC radio station at Inuvik and an Eskimo girl produces Eskimo-language programs for the CBC Northern Service. Eskimo women work as interpreters, waitresses, nursing assistants, secretaries and clerks—in southern as well as northern communities.

Increased education has tended to give the Eskimo a better chance in competing for employment. The number of schools in the North continues to grow—from 11 in 1952 to 63 at the end of 1964—and almost 2,700 Eskimo youngsters attend these schools which they share with all the other children who live in the North. More than 82 p.c. of the school-age population of the Northwest Territories is now in school. A program of grants and loans to finance university education for Eskimo, Indian and white children, approved by the Northwest Territories Council early in 1963, assures higher education for those who qualify. In addition, vocational training classes are available in such fields as auto mechanics, barbering, carpentry, domestic science and hairdressing. An apprentice training program to provide more skilled workers and raise occupational standards in the North began on Apr. 1, 1964; about 30 occupations are included in the program with more to be added.

Eskimo co-operatives have developed very rapidly. There are now 19 co-operatives engaged in commercial fishing, fine crafts, graphic art and sculpture, the operation of retail stores, logging and boatbuilding, and at Frobisher Bay and Inuvik groups of Eskimo families have formed housing co-operatives. Products from the co-operatives are maintaining the Eskimos' reputation as skilled artists and craftsmen. The West Baffin Eskimo Co-operative which produces graphic art has established Cape Dorset as an art centre of distinction, and interesting prints are also produced at Povungnituk. Soapstone sculptures from Povungnituk, Grise Fiord and Igloolik are well known and Eskimo craftsmen living at Baker Lake, Coppermine, Resolute and Great Whale River are producing a wide range of original and attractive articles. The fishery co-operatives at George River in northern Quebec and at Port Burwell and Cambridge Bay in the Northwest Territories have found ready and profitable markets for their catches of Arctic char. In 1963, Ookpik, a shaggy little sealskin owl produced by Mrs. Jeannie Snowball of the Fort Chimo Co-operative, was chosen by the Department of Trade and Commerce as the symbol for Canada Week at the Philadelphia Trade Fair. He was a sensation and received much publicity. He was registered under the trade marks and patent laws to protect Mrs. Snowball and the co-operative, and licensing agreements with manufacturing concerns in Southern Canada have created a major new source of revenue for this co-operative.

A need for more permanent homes has been created by the increasing number of settled wage-earners in northern communities. Through a program of loans and grants initiated by the Northern Affairs Department, an increasing number of Eskimos own their homes. A \$1,000 subsidy covers part of the cost of each home and the owner may borrow

* Revised in the Information Services Division, Department of Northern Affairs and National Resources, Ottawa.

the remainder from the Eskimo Loan Fund and repay it on terms adjusted to his income. A man's labour in building his home helps reduce the total cost. Since the housing program started in 1959, six new designs have been developed, with many of the new features suggested by Eskimos. Housing is often provided as a relief measure to help those who, through physical or other disability, cannot afford to pay for a house.

Individual Eskimos have had interesting experiences. Mary Panegoosho, a talented young Eskimo who is employed by the Department of Northern Affairs and edits the Eskimo-language magazine, *Inuktitut (The Eskimo Way)*, visited Ghana as the guest of the Ghanaian Government. George Koneak, an interpreter with Northern Affairs and a member of the Fort Chimo Eskimo Co-operative, went to England to represent all Eskimo co-operatives at the World Co-operative Congress. Leah Illauq, from Pond Inlet, wrote a book for Eskimo children—an imaginative tale called *The Little Arctic Tern and The Big Polar Bear*. This is an example of the field of literature and literary expression being opened up through the application of the new standard orthography, which uses the Roman alphabet to write the Eskimo language.

As Canadian citizens, the Eskimos receive the same social benefits as those who live farther south—family allowances, old age security, old age assistance and blind and disabled persons' allowances. The Federal Government also operates family and child welfare services and a rehabilitation and medical social service program designed to strengthen family and community life. Tuberculosis has not been eradicated but the incidence of the disease over the past ten years is decreasing rapidly. While the Eskimo infant mortality rate remains high compared with the all-Canada rate, it also is dropping with the improvement of health facilities and housing.

Section 4. —Statistics of World Population

World population figures given in Table 32 are from the *United Nations Population and Vital Statistics Report* for April 1965 and, except as otherwise noted, are mid-year estimates for 1963. The area figures are from the *United Nations Statistical Yearbook 1963*.

Estimated Population of the World by Continents.—The following statement presents adjusted estimates of the 1963 mid-year population of the world by continental divisions. These aggregates do not coincide exactly with the sum of the figures for individual countries and territories because they include, in addition, adjustments for over- and under-enumeration, over-estimation, data for categories of population not regularly included in the official figures, and approximations for the countries that have not provided official 1963 data. The estimates are as follows:—

<i>Continental Division</i>	<i>Population</i>
	'000
Africa.....	296,000
North America.....	281,000
South America.....	157,000
Asia (includes Asiatic Turkey).....	1,802,000
Europe (includes European Turkey).....	439,000
Oceania (includes Hawaii).....	17,500
Union of Soviet Socialist Republics (Asia and Europe).....	225,000
WORLD TOTAL.....	3,218,000
Commonwealth countries (as at June 30, 1965).....	760,216

32.—Areas and Populations of the Countries or Areas of the World, 1963

NOTE.—Status of independency or dependency is as at June 30, 1965. Members of the Commonwealth and the Territories for which the British or Commonwealth members are responsible (June 30, 1965) are indicated with an asterisk (*).

PART I.—IMMIGRATION AND EMIGRATION*

The history of immigration and the Immigration Act and Regulations is dealt with in detail in a special article entitled "Developments in Canadian Immigration" appearing in the 1957-58 Year Book at pp. 154-176. Supplementing that material is an article on the "Integration of Postwar Immigrants" at pp. 176-178 of the 1959 edition.

Section 1.—Immigration Policy and Administration

Policy.—Traditionally, Canada has sought to increase its population through immigration in order to expand the domestic market, reduce per capita costs of administration, stimulate economic activity by providing new skills, ideas and enthusiasm, and support a higher level of cultural independence and creativity. Canadian experience indicates that a substantial volume of immigration is highly desirable.

New population cannot be added haphazardly without regard to their means of subsistence or their effect on Canadian life. Technological change and the development of Canadian society to its present complex state require that to be able to establish themselves successfully new settlers must be economically competitive in terms of education, training, skills and personal qualities. Over the years, Canada has endeavoured to acquire immigrants who were adaptable to Canadian life. Such persons, finding familiar institutions in Canada, feel more at home and this assists in their establishment in the new life they find here. Canada makes every effort to sustain the movement of immigrants from countries having like economic, social and political backgrounds. On the other hand, qualified people from other countries can integrate successfully into Canadian society and the existing immigration Regulations recognize this principle. People anywhere in the world have an opportunity to immigrate to Canada if they demonstrate their suitability for life in this country and are likely to become established without hardship to themselves or disruption to the communities in which they settle.

The core of Canada's immigration policy is contained in the Regulations introduced with effect from Feb. 1, 1962. Those persons who are eligible to apply for permanent admission to Canada are specified. They include anyone, regardless of origin, citizenship, country of residence or religious belief, who is personally qualified by reason of education,

* Sections 1 and 2 of this Part were revised under the direction of the Deputy Minister, Department of Citizenship and Immigration, Ottawa.

training, skills or other special qualifications to become satisfactorily established in Canada. In practice, the personal qualifications and attributes of the applicant for admission are related to the needs and interests of Canadian society in any of its diversities—economic, social or cultural.

Other provisions of the Regulations enable the families of persons approved for admission under these terms to accompany them. When in Canada, a permanent resident may bring his spouse and dependent children as well as certain other close relatives to Canada. Except in some circumstances, no special criteria apply in the case of these immigrants. All immigrants must be in good health and of good character and be in possession of such documentation as the Regulations prescribe. Sponsors must be able to provide adequate care and maintenance for those for whom they apply.

In addition, Canada has on many occasions since the end of World War II sanctioned the entry of thousands of refugees. This is a humanitarian movement and is tangible evidence of Canada's recognition of its responsibilities in the international community. A conservative estimate of the number of refugees admitted since 1945 is 300,000.

Administration.—The Immigration Branch of the Department of Citizenship and Immigration administers the Immigration Act and Regulations. In December 1964 the Prime Minister announced that a White Paper on Immigration would be prepared for presentation to Parliament in 1965. The White Paper will provide a statement on the government's views on immigration policies and procedures in relation to national problems and national interests. It is expected that discussion of the White Paper, both in Parliament and by the public, will give rise to a consensus on the nature of changes required in immigration policy, procedures and legislation.

To make Immigration Branch operation more consistent with its objective, which is to attract to Canada as many skilled persons as the economy can absorb, and to equip it to meet the challenges of the years ahead, the Branch is being reorganized along functional lines to give better service to immigrants and to the Canadian public. This involves more decentralization of authority, the stepping up of promotional activities overseas and the provision of an up-to-date organization staffed by well-qualified personnel and based on the flow of immigration, beginning with policy and planning, moving on to the selection of immigrants overseas, and then to their reception and establishment in Canada. The plan also provides for the control of abuses of immigration laws and procedures and for the counselling of exceptional problem cases.

In June 1964, Mr. Joseph Sedgwick, Q.C., was asked by the Federal Government to inquire into serious allegations made in the House of Commons and elsewhere that certain aliens have been unlawfully detained and deprived of access to counsel. In addition, Mr. Sedgwick was requested to inquire into the general procedures being followed in relation to the arrest, deportation and prosecution of persons who entered or remained in Canada illegally. In January 1965, Mr. Sedgwick's terms of reference were expanded to include an examination of the extent and use of the discretionary powers which immigration legislation confers on the Minister of Citizenship and Immigration. He was also asked to advise on the basis and operation of the Immigration Appeal Board, as part of a general review of all such tribunals. When his reports are completed it is expected that they, together with the White Paper, will contribute to the reformulation of immigration policy and procedures.

Thirty visa offices are located abroad at London, Liverpool, Leeds, Bristol, Glasgow, Belfast, Dublin, Paris, Marseille, Brussels, Berne, The Hague, Copenhagen, Cologne, Berlin, Hamburg, Munich, Stuttgart, Vienna, Oslo, Stockholm, Helsinki, Lisbon, Madrid, Rome, Athens, Cairo, Tel Aviv, New Delhi and Hong Kong. Four offices in the United States—at New York, Chicago, San Francisco and Denver—furnish information and counselling but do not issue visas. Personnel at all posts are kept in close touch with economic conditions in Canada and thus are able to advise immigrants regarding prospects for

successful establishment. Examination of immigrants and visitors is carried out at 552 ports of entry on the Canadian coasts, at points along the International Boundary, at certain airports and at certain inland offices.

A primary objective of the immigration program is satisfactory settlement. The Federal Government assists immigrants in establishing themselves in the Canadian community through the work of the specialized settlement officers of the Immigration Branch, the Canadian Citizenship Branch, the Canadian Citizenship Registration Branch and other government agencies, and co-operates closely with several voluntary agencies having the same objective.

Section 2.—Immigration Statistics

Table 1 shows the number of immigrants arriving in Canada in each year since 1913, the peak year of immigration into the country. Table 2 shows the number and distribution of immigrants in the population of Canada on the latest census date, June 1, 1961, by period of arrival.

1.—Immigrant Arrivals, 1913-64

NOTE.—Figures for 1852-93 are given in the 1942 Year Book, p. 153, and for 1894-1912 in the 1948-49 edition, p. 175.

¹ Up to the date of the Census, June 1, 1961.

The above table shows that 1,507,116 persons reported that they had come to Canada between Jan. 1, 1946 and June 1, 1961. These immigrants constituted about 75 p.c. of the total number of immigrants who arrived in Canada during that period. According to the

records of the Department of Citizenship and Immigration, 2,033,598 persons entered Canada as immigrants during the period 1946-61. The difference between this total and the 1,507,116 postwar immigrants reported in the 1961 Census, amounting to 526,482 persons, represents the losses due to death and emigration among the postwar immigrant arrivals up to June 1961. Since this difference is arrived at by comparing statistics derived from two different sources, it must be taken as only an approximate measure of these losses. It is estimated that deaths of immigrants arriving since 1946 would not exceed 86,000 by June 1961. Hence it would appear that roughly 440,000 emigrated in the period between January 1946 and June 1961, or slightly more than one fifth of the total arrivals over this period.

The 440,000 postwar immigrants who appear to have emigrated from Canada up to June 1961 would thus constitute a little over half the total estimated emigration from Canada since 1946, according to data on emigration used in the preparation of annual population estimates. In this connection it might be mentioned that a substantial element in total Canadian emigration is the movement of Canadian-born persons to the United States, some 387,000 entering the United States as immigrants between July 1946 and July 1961 according to the United States Immigration Service records (see p. 233).

Recent Immigration.—The extent of immigration to Canada in any period is affected both by domestic conditions and by conditions abroad. However, these influences are seldom immediately decisive. News of good economic conditions in Canada predisposes people in favour of this country but, because the immigration process usually takes several months, actual immigration is not always fully coincidental with the economic situation, so that immigration may at times be slight in good years but appear unduly heavy in less buoyant periods. The time-lag caused by selection, medical examination and documentation is unavoidable. Transportation is often another delaying factor and to these considerations must be added the effect of seasonal unemployment in Canada, which tends to discourage immigration during the months from November to April.

In comparison with the relatively high levels of immigration in the three years immediately following the outbreak of the Korean War in 1951, immigration dropped off slightly from 168,868 in 1953 to 154,227 in 1954. In 1954 a minor setback occurred in the Canadian economy and this resulted in a very sharp decline of some 44,000 in the 1955 immigrant intake. However, with the return of better times in North America and the deterioration of the political situation in Europe, immigration rose by 55,000 in 1956. The Hungarian revolution and the Suez crisis of 1956 had a sharp impact on Canadian immigration in 1957 when 282,164 persons were admitted, including 31,643 from Hungary and 108,989 from the British Isles. This was the largest number of immigrants to enter Canada since 1913.

The conclusion of the Suez affair and the suppression of the Hungarian revolt restored some measure of calm in Europe. Canada's economy suffered a recession in 1956 and 1957 while Europe's economic position improved, as a result of which only 124,851 immigrants came to Canada in 1958. Britain's recovery from the war and its aftermath was reflected in the fact that, for the first time in the postwar years, the British Isles group of arrivals was not the largest—persons from Italy were in first place, numbering 27,043 compared with 24,777 from the British Isles. Total arrivals dropped from 106,928 in 1959 to 104,111 in 1960 and to 71,689 in 1961 and during these years the numbers from Italy remained in first place. The main contributing factors to the decline in number of immigrant arrivals after 1958 were: (1) the upsurge in the economies of those European countries from which Canada has received the majority of its immigrants and (2) the increasing emphasis placed on selecting the immigrant who has sufficient funds and the necessary knowledge to establish himself in a business or industry of his own, as well as on the immigrant with special skills or qualifications which would permit his ready integration into the Canadian labour force.

In 1962 the total number of immigrants increased slightly to 74,586 and immigrants from the British Isles again headed all groups. In 1963 there were encouraging signs of a

IMMIGRANT ARRIVALS IN CANADA FROM THE BRITISH ISLES, ALL EUROPEAN COUNTRIES AND ALL COUNTRIES, 1955-64

definite upsurge in interest abroad in immigration to Canada; arrivals numbered 93,151, an increase of approximately 25 p.c. over 1962. This trend continued in 1964 when arrivals numbered 112,606, a figure 21 p.c. greater than in 1963. The upsurge may be attributed to two main factors—an intensification of promotional and recruitment activities in the main source countries and an expansion of immigration examination facilities in other areas of the world which previously have contributed very few immigrants to Canada. In 1964 immigrants from the British Isles headed the list, with Italy second and the United States third. These three countries together contributed 54 p.c. of the new arrivals. However, the highest percentage increases over the 1963 figures were arrivals from Asia, which increased 60 p.c. to a total of 6,526, and from Africa, which increased 63 p.c. to 3,874. The most significant feature was that, of all immigrants destined to join Canada's labour force in 1964, 59 p.c. were in the more skilled categories.

Analyses of Immigration in 1962-64.—Analyses of the content of the immigration movement during the years 1962, 1963 and 1964 are given in Tables 3 to 10, and the numbers of persons deported from Canada for various reasons for the years 1955-64 in Table 11.

Table 3 classifies immigrant admissions by country of last permanent residence for 1962-64. During the three-year period, 25.4 p.c. of the immigration flow came from Britain and the Republic of Ireland, 46.8 p.c. from Continental Europe, 12.8 p.c. from the United States and 14.9 p.c. from all other countries.

3.—Immigrant Arrivals by Country of Last Permanent Residence, 1962-64

NOTE.—Comparable figures from 1946 are given in the corresponding table of previous Year Books beginning with the 1951 edition; figures in less detail for 1939-45 appear in the 1950 edition, p. 186.

¹ Includes a few minor groups.

² Reported as Swiss origin but evidently one of the constituent races

such as German, French, Italian, etc.

Out of every 100 immigrants admitted to Canada during the three-year period 1962-64, 29 were British subjects, 18 were citizens of Italy, 11 of the United States, five of Germany, five of Greece, and five of Portugal; many other nationalities made up the remaining 27.

6.—Citizenship of Immigrant Arrivals, 1962-64

NOTE.—Figures from 1930 are given in the corresponding table of previous Year Books beginning with the 1936 edition.

Sex distribution of recent immigrant arrivals is shown in Table 7. In the three years 1962-64, adult males comprised 34.6 p.c. of the immigrants, adult females 38.5 p.c. and children under 18 years of age the remaining 26.9 p.c. Without relation to age, 51.7 p.c. of the newcomers were females.

7.—Sex Distribution of Immigrants as Adult Males, Adult Females and Children, 1962-64

NOTE.—Figures from 1930 are given in the corresponding table of previous Year Books beginning with the 1946 edition.

Item	1962	1963	1964
No.	No.	No.	No.
Males.....	34,546	45,163	55,825
Under 18 years.....	9,740	12,418	16,321

Adult.....	30,613	35,894	41,437
Totals, Immigrants.....	74,586	93,151	112,606

The number of female immigrants coming into Canada has been higher than the number of male immigrants in every year since 1957. In 1964 the excess of females was 956 but in the age groups 0-14, 25-29, 30-39 and 40-49 years the number of males exceeded that of females. In the single category, males exceeded females in all age groups up to 40 years but in the married category females exceeded males by 2,851, in the widowed category by 2,657 and in the divorced or separated category by 422. Of all persons arriving in 1964 who were 15 years of age or over, 54.3 p.c. were married, 39.8 p.c. were single and 5.9 p.c. were widowed, divorced or separated.

Destinations and Occupations.—Upon arrival in Canada, immigrants are asked to state their intended destinations. According to these records, Ontario absorbed by far the highest proportion of arrivals in the three-year period 1962-64—52.2 p.c. of all the males and 53.3 p.c. of all the females. Quebec was the second province of destination, receiving 25.3 p.c. of the males and 23.6 p.c. of the females, followed by British Columbia with 9.9 p.c. of the males and 10.8 p.c. of the females. The proportions intending to settle in the Prairie Provinces were 9.9 p.c. and 9.8 p.c., respectively, and in the Atlantic Provinces 2.6 p.c. and 2.5 p.c., respectively. The provincial distribution has changed little from year to year throughout the whole postwar period.

In like manner, immigrant arrivals are asked to record the occupations they intend to follow in Canada. Approximately 49.9 p.c. of the persons admitted in 1964 declared that they would enter the labour force. The other 50.1 p.c. were wives, children and other dependants or were retired persons. Of the male workers, 22.1 p.c. were classed as professional and managerial, 5.7 p.c. were in agricultural occupations, 5.5 p.c. in service

occupations, 39.5 p.c. in manufacturing, mechanical and construction trades, and 14.5 p.c. were general labourers. About 24 p.c. of the female immigrants entering the labour force were intending to follow service occupations. Details are given in Table 10.

Deportations.—Deportations by cause and nationality are shown in Table 11 for the years 1955-64. Persons who have not yet acquired domicile (five years of residence in Canada) may be deported if they fall into prohibited classes at time of entry or within five years of entry, if they have engaged in commercialized vice, have been convicted under the Criminal Code or have become inmates of prisons or mental institutions, or have gained entry by fraudulent means. The causes that may lead to deportation are

narrowed after a person has acquired domicile. A person not a citizen may be deported regardless of length of residence if he is found to be a member of a subversive organization or engages in subversive activities, or if he has been convicted of an offence involving disloyalty to the Queen, or if he has, outside of Canada, engaged in activities detrimental to the security of Canada. A Canadian citizen cannot be deported.

11.—Deportations,¹ by Cause and Nationality, 1955-64

NOTE.—Figures from 1903 are given in the corresponding table of previous Year Books.

Section 3.—Emigration Statistics

Emigration from Canada is an important factor tending to offset to some extent present and past immigration activities. The major outward movement has always, of course, been to the United States and that movement, both of native-born Canadians and of Europeans who originally migrated to Canada, has attained considerable proportions at certain periods. No Canadian statistics on emigration are available but Table 12 gives figures taken from the annual reports of the Immigration and Naturalization Service of the United States Department of Justice. These figures show the numbers of persons entering the United States from Canada during the years ended June 30, 1955-64 with the expressed intention of establishing permanent residence in that country. They do not include persons travelling for pleasure, even for extended periods of time, holders of border-crossing cards (normally issued to persons living in border areas of Canada but working in the United States) or casual tourist crossings in these same areas.

Of the 38,074 Canadian-born persons entering the United States in the year ended June 30, 1964, 18,536 were males and 19,538 females. Slightly more than one quarter, or 10,139, of the total native-born emigrants were males in the productive age group, 20-59 years. By occupation, the largest group of the total of 38,074 native-born persons was the professional or technical group which numbered 4,376; clerical or kindred workers numbered 3,952, and 2,184 were classed as craftsmen or foremen. On the other hand, 20,702 persons, or 54.4 p.c. of the total, were classed as housewives, children and others with no reported occupation. Altogether, 42.1 p.c. of the total were children under 20 years of age.

Of the 51,114 persons entering the United States from Canada claiming Canada as country of last permanent residence—which of course includes native-born persons and those born in other countries who have resided in Canada—the Immigration and Naturalization Service, United States Department of Justice, lists 6,510 as professional, technical and kindred workers, 5,322 as clerical and kindred workers and 4,161 as craftsmen, foremen and kindred workers. Housewives, children and others with no reported occupation accounted for 25,304, or 49.5 p.c. of the total.

12.—Canadian-Born Persons Entering the United States from Canada and Elsewhere, and All Persons Entering the United States from Canada, Years Ended June 30, 1955-64

NOTE.—Includes only persons who have declared their intention of remaining permanently in the United States when applying for a visa (see text on p. 233). SOURCE: Immigration and Naturalization Service, United States Department of Justice.

PART II.—CANADIAN CITIZENSHIP*

Naturalization procedures and events leading to the passing of the Canadian Citizenship Act are given in the 1951 Year Book, pp. 153-155.

Section 1.—The Canadian Citizenship Act

The Canadian Citizenship Act came into force on Jan. 1, 1947, its purpose being to give a clear definition of Canadian citizenship and provide an underlying community of status for all the people of Canada. Since Jan. 18, 1950, the administration of Canadian citizenship has been the responsibility of the Department of Citizenship and Immigration. The provisions of the Act and its several amendments are outlined in some detail in the 1955 Year Book, pp. 177-181. More briefly, they are given in the following paragraphs.

Natural-Born Canadian Citizens, Born before Jan. 1, 1947.—The Act conferred natural-born status upon two categories of persons in being on Jan. 1, 1947. These were (1) those born in Canada or on a Canadian ship or aircraft and who were not aliens on Jan. 1, 1947; and (2) those born of Canadian fathers outside of Canada who were not aliens on Jan. 1, 1947 and were either minors on that date or had already entered Canada for permanent residence.

The Act provides that a person born abroad who was a minor on Jan. 1, 1947 will automatically cease to be a Canadian citizen on his 24th birthday or on Jan. 1, 1954, whichever is the later date, unless he has his place of domicile in Canada at such date or has, before such date and after reaching the age of 21 years, filed a declaration of retention of Canadian citizenship.

Natural-Born Canadian Citizens, Born after Dec. 31, 1946.—A person born outside of Canada subsequent to that date, whose responsible parent is considered a Canadian citizen pursuant to the terms of the Canadian Citizenship Act, is a Canadian if his birth is registered with the Registrar of Canadian Citizenship within two years of its occurrence or within such extended period as the Minister may authorize in special cases.

A person who becomes a natural-born Canadian citizen in such a manner will automatically cease to be a Canadian citizen if he fails to file a declaration of retention prior to his 24th birthday or does not have his place of domicile in Canada upon that date.

Canadian Citizens other than Natural-Born.—Before the 1953 amendments to the Citizenship Act, the only persons who acquired Canadian citizenship on Jan. 1, 1947

* Prepared in the Citizenship Registration Branch under the direction of the Deputy Minister, Department of Citizenship and Immigration, Ottawa.

through the transitional clauses of Sect. 9 were persons who were naturalized in Canada before that date, British subjects who had Canadian domicile at the commencement of the Act and women lawfully admitted to Canada and married prior to Jan. 1, 1947 whose husbands would have qualified as Canadian citizens if the Act had come into force before the date of marriage. Sect. 9 was amended on June 1, 1953, so that a British subject who had his place of domicile in Canada for at least 20 years immediately before Jan. 1, 1947 need not comply with the requirements of Canadian domicile provided he was not under an order of deportation on Jan. 1, 1947.

Acquisition of Canadian Citizenship by Aliens and British Subjects.—The Act provides a means of acquiring Canadian citizenship. An alien who wishes to become a Canadian citizen must apply through his local court or through one of the special citizenship courts now established. He must appear before the judge for a hearing and will in due course be granted citizenship if his application is approved by the judge and by the Minister. A British subject may apply for citizenship directly to the Minister. It should be added that a minor child does not automatically acquire Canadian citizenship upon the grant of citizenship to the responsible parent.

Status of Married Women.—The Canadian Citizenship Act places no disabilities upon the married woman. She neither acquires nor does she lose Canadian citizenship by marriage. In order to acquire Canadian citizenship she must apply in exactly the same manner as does a man. There is, however, one advantage granted to her—if she is married to a Canadian citizen she may apply for citizenship after a residence of only one year in Canada.

The Canadian Citizenship Act also enables a woman married to an alien whose nationality she acquired upon marriage to divest herself of Canadian citizenship by the filing of a declaration of renunciation. Finally, it provides a means whereby a woman, who had become an alien through marriage prior to Jan. 1, 1947, may acquire the Canadian status she would otherwise have assumed on that date.

Status of Minor Children.—The minor child of a Canadian citizen other than a natural-born Canadian may receive a certificate of Canadian citizenship upon application therefor by his or her responsible parent, *de facto* guardian, or mother if she has custody of the child. Provision is also made in the Citizenship Act for the granting of a certificate of citizenship to a minor child in special circumstances.

Loss of Canadian Citizenship.—Canadian citizenship may be lost in the following manner:—

- (1) A Canadian citizen who when outside of Canada and not under disability acquires by a voluntary and formal act other than marriage the nationality or citizenship of a country other than Canada. This does not apply if the country is at war with Canada at the time of acquisition but in such a case the Minister may order that he cease to be a Canadian citizen. The purpose of this is to hold the person, if deemed necessary, to his obligations as a Canadian.
- (2) A natural-born Canadian citizen who is a dual national by birth or through naturalization, and any Canadian citizen on marriage, may after attaining the age of 21 cease to be a Canadian citizen through the making of a declaration of renunciation thereof.
- (3) A Canadian citizen who under the law of another country is a national or citizen of such country and who serves in the armed forces of such country when it is at war with Canada. This does not apply if the Canadian citizen became a national or citizen of such country when it was at war with Canada.
- (4) An other-than-natural-born Canadian citizen, unless he served outside Canada in the Armed Forces of Canada in time of war or other related circumstances, or unless otherwise exempt, loses his citizenship automatically if he has resided outside of Canada for ten consecutive years. The period of absence may, however, be extended upon request if the application is filed and granted before loss occurs and if good and sufficient reason exists.

Loss of Citizenship by Revocation—Applicable Only to Naturalized Persons.—In 1958 the Canadian Citizenship Act was amended and limited the provisions regarding loss of

Canadian citizenship to the following: the citizenship of a Canadian citizen other than a natural-born Canadian citizen may be revoked by the Governor in Council if, upon a report from the Minister, he is satisfied that such Canadian citizen, having been charged with the offence of treason under the Criminal Code or with an offence under the Official Secrets Act, has failed or refused to return to Canada voluntarily within such time as may be prescribed in a notice sent by the Minister to such person at his last known address and has not appeared at the preliminary inquiry into such offence or at the trial of such offence, or both as the case may be; or has obtained a certificate of naturalization or of Canadian citizenship by false representation or fraud or by concealment of material circumstances.

Doubt as to Loss of Citizenship.—Where in the opinion of the Minister a doubt exists as to whether a person has ceased to be a Canadian citizen, the Minister may refer the question to the Commission referred to in Subsection (4) of Section 19 for a ruling and the decision of the Commission or the Court, as the case may be, shall be final.

Loss of Citizenship by Revocation—Applicable to Both Natural-Born and Naturalized Persons.—The Governor in Council may in his discretion order that any person shall cease to be a Canadian citizen if, upon a report from the Minister of Citizenship and Immigration, he is satisfied that such person has, when not under a disability (1) acquired voluntarily, when in Canada, the citizenship of a foreign country (other than by marriage), (2) taken or made an oath, affirmation, or other declaration of allegiance to a foreign country, or (3) made a declaration renouncing his Canadian citizenship.

Section 2.—Canadian Citizenship Statistics

According to the 1961 Census, which required that each person state the country to which he owed allegiance and had citizenship rights as at June 1, 1961, less than 6 p.c. of Canada's population reported a country of citizenship other than Canada. Table 1 shows the citizenship of the population by province and Table 2 gives the numerical and percentage distribution of the population by country of citizenship for 1961 compared with the distribution in 1951.

Characteristics of Persons Granted Citizenship Certificates in 1964.—Comparable detailed statistics showing the characteristics of persons granted citizenship certificates are available since 1953; such characteristics include age, marital status, occupation, period of immigration, residence and previous nationality. The number of applicants fluctuates from year to year but it is known that about 40 p.c. of the immigrants who entered Canada during the past ten years who are eligible for Canadian citizenship have become Canadians.

Of the 64,334 persons granted citizenship in 1964, fewer than 1 p.c. had immigrated to Canada before 1921, 2 p.c. in the period 1921-40, 7 p.c. in the period 1941-50 and 90 p.c. after 1950. Regionally, these new citizens were distributed as follows: 2 p.c. in the Atlantic Provinces, 18 p.c. in Quebec, 54 p.c. in Ontario, 14 p.c. in the Prairie Provinces and 12 p.c. in British Columbia. Over 87 p.c. of them resided in urban centres.

About 18 p.c. of the persons naturalized in 1964 previously owed allegiance to a British Commonwealth country, 16 p.c. were former citizens of Italy, 13 p.c. of Germany, 10 p.c. of the Netherlands, 7 p.c. of Hungary, 5 p.c. of Greece and 5 p.c. of Yugoslavia. Most of the persons designated as "stateless" were born in Poland, the U.S.S.R., Yugoslavia, Hungary, Germany, Czechoslovakia and Romania.

Among the males in the labour force naturalized in 1964, craftsmen, production process and related workers occupations were reported by 45 p.c., 12 p.c. were in service and recreation occupations, 11 p.c. were in professional and technical occupations, labourers accounted for 9 p.c., managerial occupations for 6 p.c., clerical workers for 5 p.c. and farmers and farm workers for 4 p.c. each. Of the females, 47 p.c. were homemakers and, among those employed outside the home, 32 p.c. were in the craftsmen, production process and related workers occupations group, 26 p.c. were in service and recreation occupations and 24 p.c. were in clerical occupations.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

Vital statistics provide a key to the interpretation of population development—a measure of the pace at which it is growing, the rate at which women are marrying and reproducing, and the effect this has on the age and sex distribution of the population, as well as the relative importance of the diseases that cause death each year. Vital statistics constitute the record of births, deaths, marriages and divorces registered in the provinces and territories of Canada. The continuity of such data gives a constant guide to the planning, operation and evaluation of many national activities, particularly in the fields of public health, education, community planning and various types of business enterprise.

This Chapter gives a fairly detailed coverage of the vital statistics information available, gives life tables for males and females and presents a comparison of the principal Canadian vital statistics rates with those of other countries. In making international and interprovincial comparisons of birth, death and marriage rates, it is important to note that part of the differences observed over a period of years as between countries, provinces or local areas may be caused by differences in the sex and age distribution of the populations involved. Similarly, rates for any one area may be affected by changes in such distribution. The population data upon which vital statistics rates are computed are given in Chapter III of this volume. Births and deaths are classified by place of residence (births according to the residence of the mother) and marriages by place of occurrence.

The history of the collection of vital statistics in Canada is covered in the 1948-49 Year Book, pp. 185-188. Detailed information is given in *Vital Statistics* (Preliminary Report) (Catalogue No. 84-201), *Vital Statistics of Canada* (Catalogue No. 84-202) and in other regular and special reports; in addition, certain unpublished data are available on request.

Section 1.—Summary of Vital Statistics

Table 1 gives a summary for reference purposes of the principal vital statistics of the provinces and territories of Canada for five-year periods 1941-60 and for single years 1961-63. Table 2 shows similar data for urban centres having at least 20,000 population at the date of the 1961 Census for the year 1963 with comparative averages for 1956-60.

* Revised in the Vital Statistics Section, Health and Welfare Division, Dominion Bureau of Statistics.

1. —Summary of Principal Vital Statistics, by Province, 1941-63

NOTE.—Figures for the years 1921, when the collection of national statistics was initiated, to 1940 are given in previous editions of the Year Book. Figures for neonatal mortality (within the first four weeks of birth) are given on p. 269 and those for divorces on p. 278.

¹ Excess of births over deaths.² Deaths under one year of age; deaths within the first four weeks of

birth are given on p. 269.

³ Per 1,000 population.⁴ Per 1,000 live births.⁵ Figures for Newfoundland are included from 1949.

2.—Summary of Principal Vital Statistics for Incorporated Urban Centres of 20,000 Population or Over,¹ 1963 with Average for 1956-60

NOTE.—Birth, death and natural increase rates cannot be computed for 1963 or the period 1956-60 since urban centre populations are not known for intercensal periods. Urban centres are designated in this table by the following abbreviations: c.=city, t.=town, vl.=village and d.m.=district municipality.

¹ As at the date of the 1961 Census; residents only.

² Excess of births over deaths.

³ Deaths under one year of age.

⁴ Deaths under 28 days.

⁵ By place of occurrence.

⁶ Per 1,000 live births.

⁷ Population fewer than 20,000 at date of 1961 Census but included as the largest urban centre in Prince Edward Island.

VITAL STATISTICS RATES, 1924-63

Section 2.—Births*

No accurate figures on Canadian crude† birth rates are available prior to 1921, when the annual collection of official national figures was initiated. However, the following rough estimates of the average annual crude rates for each ten-year intercensal period between 1851 and 1921 may be inferred from studies of early Canadian census data:—

Intercensal Period	Estimated Average Annual Crude Birth Rate (per 1,000 Population)	Intercensal Period	Estimated Average Annual Crude Birth Rate (per 1,000 Population)
1851-61.....	45	1891-1901.....	30
1861-71.....	40	1901-11.....	31
1871-81.....	37	1911-21.....	29
1881-91.....	34		

* Unless otherwise indicated, "births" in this Section refer to infants born alive; stillbirths are dealt with under a separate heading on p. 257 and under multiple births on p. 251. For international comparisons, see Section 7, pp. 282-283.

† A crude rate is one based on the total population.

The general trend in the national birth rate since 1924 is shown in the chart on p. 248 and since 1941 in Table 1. The annual rates declined gradually but steadily from 29.3 in 1921 to a record low of 20.1 in 1937, recovered sharply in the late 1930's and during World War II to 24.3 in 1945, and in the two years following the War rose to a postwar high of 28.9 in 1947. Between 1948 and 1959 the rate remained remarkably stable at between 27.1 and 28.5 but has since been declining and in 1963 reached a postwar low of 24.6. Part of this decline is attributable to the fact that the crude birth rate is based on *total* population, which now includes larger proportions of 'non-productive' population, as well as to the fact that the large, immediate postwar cohorts of married women are now approaching the end of their reproductive periods and have completed their families. Further, even if the annual number of births were to remain stable at 450,000 to 500,000—as it has for the past five to ten years—the net effect of an increase in population is a declining crude birth rate.

The rates in most provinces followed trends very similar to the national trend but showed some regional differences in recent years. Although all provinces had record high rates immediately following World War II, average birth rates in Ontario and the western provinces were higher during the 1951-55 period than during 1946-50 and those for Quebec and the Maritimes were lower than during 1946-50. In fact, Ontario, Alberta and British Columbia had record high crude birth rates during the 1956-59 period. However, most of the provinces recorded their lowest postwar rate in 1963.

It is often erroneously assumed that the Province of Quebec has not only the largest number of births annually but the highest birth rate in Canada. Since the late 1930's or early 1940's Newfoundland, in some years New Brunswick and, since 1953, Alberta have had higher birth rates than Quebec. Table 1, pp. 243-244, shows that six provinces—Newfoundland, Prince Edward Island, Alberta, New Brunswick, Saskatchewan and Nova Scotia, in that order, had higher crude rates than Quebec in 1963, followed by Ontario, Manitoba and British Columbia. However, since these crude rates are based on the *total* population they do not reflect the fertility of the women of reproductive ages in the different provinces or the number married within these reproductive ages. A more accurate measure of the true birth rate is one based on the number of married women between the ages of 15 and 45 (see pp. 252-253).

Also contrary to popular impression, since 1953 more babies were born each year in Ontario than in the Province of Quebec; in 1963, 155,089 babies were born to Ontario mothers as compared with 133,640 to Quebec mothers. Altogether, 465,767 children were born alive in Canada in 1963, 13,508 fewer than the record 479,275 born in 1959 and 3,926 fewer than the number born during 1962.

Sex of Live Births.—With rare exceptions, wherever birth statistics have been collected they have shown an excess of male over female births. No conclusive explanation of this excess has yet been given. Nevertheless it is so much an accepted statistical fact that a proper ratio of male to female births has become one of the criteria of complete registration. The number of males to every 1,000 females born in Canada has averaged around 1,057 since the middle 1930's. Provincial sex ratios vary much more widely because of the relatively small number of births involved—the smaller the total number of births, the greater the chance of wide sex-ratio variations from year to year. Another commonly acknowledged fact in many countries—although there is no generally accepted explanation for it—is that the male ratio appears to rise during or shortly after major wars. This seems to have happened in Canada between 1942 and 1945 when the ratio rose to an average of 1,064 during these four years as compared with averages of 1,054 between 1931-41 and 1,057 since 1946. In 1963, 1,053 male infants were born for every 1,000 females.

3.—Sex Ratios of Live Births, 1931-63

NOTE.—Figures for Newfoundland are included from 1949 and those for the Yukon and Northwest Territories from 1950.

Hospitalized Births.—In 1963 over 98 p.c. of all Canadian births occurred in hospital as compared with 88 p.c. seven years previously. Table 4 shows the rise in hospitalized births in each province since 1931. Before the initiation in 1958 of the federal-provincial hospital insurance programs—in which all provinces were participating by 1961—there were rather wide variations among the provinces in percentages of hospitalized births. Such variations were caused by the existence of prepaid or provincially sponsored hospital, maternity or medical care plans in some provinces, the unavailability of hospital facilities in others—particularly in remote rural areas—and preference for home delivery in some local areas. Although some variation still exists, the operation of the hospital insurance program has probably been responsible for the noticeable increases in hospitalized births in provinces that previously had lower proportions, for example in New Brunswick where the hospital insurance plan was put into effect on July 1, 1959, and in Quebec where the plan went into effect in 1961.

¹ Excludes Newfoundland for which data are not available.

Births in Urban Centres.—Table 2, pp. 245-247, shows the number of births in 1963, as compared with the average for 1956-60, to mothers residing in each urban centre of 20,000 population or over. Because the populations of urban centres are not known for intercensal years, birth rates cannot be computed for the 1956-60 period or for 1963.

Illegitimacy.*—In 1963, over 5 p.c. of the live births in Canada were illegitimate. This percentage is low compared with that of many countries of the world but has been rising, particularly during the past five years.

¹ Figures for Newfoundland are included from 1949, and those for the Yukon and Northwest Territories from 1951.

Multiple Births.—Approximately one confinement in 90 in Canada results in the birth of more than one child as compared with one in 85 several years ago—in other words, the chances of a confinement resulting in the birth of more than one child are fewer now than formerly. The chance of a mother delivering twins is about one in 90, triplets, one in about 10,000 and quadruplets, one in about 750,000 or more. Two sets of quadruplets were born in Canada during 1960—the first since 1957—and one set in each of 1962 and 1963. In 1963 a total of 466,537 mothers bore a total of 471,544 infants, of which 465,767, or almost 99 out of every 100, were born alive.

Other facts illustrated by Table 6 are that the proportion of stillbirths is higher among multiple than among single births, about twice as high for twins and between three and five times as high for triplets.

* The term "illegitimate", as used here, does not refer to *all* births conceived out of wedlock but is necessarily restricted to those in which parents reported themselves as not having been married to each other at the time of birth or registration and, in Ontario, to those in which the marital status of the mother was reported as "single" at the time of birth or registration.

Fertility Rates.—The sex and age composition of a population is obviously an important factor in determining crude birth, marriage and death rates. Since almost all children born each year are to women between the ages of 15 and 45, variations in the proportion of women of these ages to the total population will cause variations in the crude birth rate of different countries—or of different regions within a country—even though the actual rates of reproduction or *fertility* of the women in these age groups in each country or region are identical.

A more accurate measure of the fertility of a population would be one based on the number of women of reproductive age, that is those 'able' to bear children, and a still more accurate measure would be one based on the number within this group that are married, that is those 'eligible', as it were, to bear children. Each type of rate has its uses, depending on the comparisons required. The two types—generally referred to as *crude fertility rates*—are compared in Table 7, and indicate the variations in each type as between provinces and the provincial trends over the years 1960-63.

The number of infants born in relation to every 1,000 women in the population between the ages of 15 and 45 has been declining for the past few years, dropping from 130 in 1960

to 121 in 1963. However, the rates varied among the provinces from 113 to 183 during the past four years; Newfoundland, Prince Edward Island, Alberta, Saskatchewan and New Brunswick had the highest rates and British Columbia, Quebec, Ontario and Manitoba, in that order, the lowest. On the other hand, the average annual number of infants born to every 1,000 *married* women in the country as a whole dropped from 184 to 173 during the same period. According to this measure, the five eastern provinces and Saskatchewan had, on the whole, the highest rates.

¹ Since the number of births to women over 44 is quite small, rates are here restricted to women under 45.

² Excludes the Yukon and Northwest Territories.

The rates shown in Table 7 are *crude* in the sense that they do not take into account differences in fertility in the component age periods within the female reproductive life span, nor the proportions of married women in each age period. It is therefore conventional practice to calculate what are termed *age-specific fertility rates*, i.e., the number of infants born annually to every 1,000 women in *each* of the reproductive age periods, again either for all women or for those who are married. Table 8 provides these two sets of rates—the former for 1941 and 1951-63 and the latter for 1962 and 1963 in addition to the census years from 1941 to 1961.

Another measure of fertility in a country is obtainable from what is conventionally referred to as a *gross reproduction rate*. The gross reproduction rates shown in Table 8 indicate the average number of female children born each year to each woman living through the child-bearing ages. In other words, this figure represents the average number of females that *would* be born to each woman who lived to age 50 if the fertility rate of the given year remained unchanged during the whole of her child-bearing period. A gross

reproduction rate of 1.000 indicates that, on the basis of current fertility and without making any allowance for mortality among mothers during their child-bearing years, the present generation of child-bearing women would exactly maintain itself. Canada has always had one of the highest gross reproduction rates among the industrialized countries of the world. Even during the period of low birth rates in the 1930's the rate varied between 1.300 and 1.500 and since World War II has ranged from 1.640 to a record high of 1.915 in 1959; in 1963 the rate stood at 1.800, still 80 p.c. more than the number required for the population to replace itself. With minor exceptions, provincial reproduction rates are also well above the replacement level.

Table 8 indicates that in 1963, considering all women whether married or not, women in their 20's were the most reproductive, as might be expected; on the average, for every 1,000 women between the ages of 20 and 25, 228 infants were born during that year or, expressed another way, about one woman out of four in that age group gave birth to a live-born infant. This compares with a rate of almost 213 for women in the age group 25-29, which is closer to one in five. However, among *married* women, teen-age mothers have consistently had the highest fertility, with one out of two bearing a child each year on the average, while about 36 out of every 100 married women in their early 20's had a child every year as compared with about one in four for women in their late 20's.

8.—Age-Specific Fertility Rates per 1,000 Women, by Age Group, 1941, and 1951-63

Age of Parents.—Age of parents is an important variable in any analysis of birth statistics. The distribution of legitimate and illegitimate live births by age of the parents is given in Table 9.

Over 7 p.c. of the legitimate children born in 1963 were born to mothers under 20 years of age, in over one third of the births the mother was under 25 years, and in almost two thirds, under 30 years; in almost one fifth of the births the father was under 25 years of age, and in over 48 p.c. of all births the father was under 30 years. On the other hand, almost two fifths of the illegitimate infants born were born to mothers under 20 years of age and over an additional one third to mothers under 25 years. The average age of all the married mothers to whom a child was born in 1963 was 27.9, and of the fathers 31.2 years; ten years ago the average ages of the parents were 28.4 and 31.9, and thirty years ago 29.3 and 33.7, respectively.

The median age of unmarried mothers who bore a live-born child in 1963 was 21.2; that is, half of the mothers of the 23,697 'illegitimate' children delivered in 1963 were under 21.3 years of age.

Order of Birth.—Table 10 shows the order of birth of all live-born infants in 1963 according to the age of the mother. As would be expected, 29,824, or almost three fourths of the 40,518 infants born to mothers under 20 years of age, were first-born, whereas almost six out of every ten of the children born to mothers of 20-24 years were second or later children. This is a reflection of the earlier marriages and heavy fertility of recent years. In 1963, 189 infants were born to mothers who had not yet reached their 15th birthday.

Birthweight.—Excluding Newfoundland, information on birthweight of newborn infants has recently become available from provincial records of birth. These data, in addition to their usefulness in calculating the average weights of newborn infants, are of importance from the public health and medical points of view in throwing light on the number of immaturely developed foetuses that are delivered alive. According to criteria recommended by the World Health Organization, infants of 5 lb. or less at birth are considered 'immature' and hence exposed to a much greater risk of dying than those over this weight. Weight at birth depends on a host of maternal factors, most of which are not included in the birth records, but some information is available on the age of the mother

and length of pregnancy before delivery.* Analysis of this information shows that (1) there are variations in average weight according to the age of the mother, (2) women under 20 and over 35 tend to produce higher proportions of immature infants, so that the late 20's and early 30's would appear to be the ideal ages for motherhood, and (3) practically all infants of less than 28 weeks gestation are delivered 'immature' according to the definition. The average single male infant born at full term weighs about 7½ lb. at birth and the average female about 4 oz. less.

Stillbirths.†—The 5,732 stillbirths in 1963 represented a ratio of 12.3 for every 1,000 foetuses born alive. As is evident from Table 12, the stillbirth rate has been decreasing steadily and has been cut by more than half over the past quarter-century. Although the variations between provincial rates have never been wide, rates in some provinces have been reduced more than in others. The stillbirth rate among unmarried mothers has been consistently higher than that among married mothers but the difference is narrowing.

* Obtainable from the Vital Statistics Section, DBS.

† Stillbirth figures given here refer only to foetuses of 28 or more weeks gestation which "showed no sign of life". Up to the end of 1963, only foetuses delivered after at least 28 weeks pregnancy which showed no sign of life were required to be registered with the provincial authorities; as of Jan. 1, 1964, all provinces (except Newfoundland) provide for the compulsory registration of all stillbirths of 20 or more weeks gestation, a 'stillbirth' being defined as "the complete expulsion or extraction from its mother, after at least 20 weeks pregnancy, of a product of conception in which, after such expulsion or extraction, there is no breathing, beating of the heart, pulsation of the umbilical cord, or unmistakable movement of voluntary muscle". Available data for stillbirths of 20-27 weeks pregnancy for those provinces having this legislation in effect before 1963 are obtainable from the Vital Statistics Section, DBS.

¹ Exclusive of Newfoundland for all years and the Yukon and Northwest Territories for 1941-50. for Newfoundland are included from 1949.

² Figures

Table 13 illustrates the fact that the risk of having a stillborn child increases with the age of the mother. Although stillbirth rates for mothers of all ages have been declining, they continue to be three to four times as high for mothers over 40 years of age as for mothers under 30. The average age of mothers who bore stillborn children in 1963 was 29.9 years; the median age was 29.3. The average age of mothers who bore legitimate live-born children was 27.9 and of those who bore illegitimate live-born offspring was 23.4.

Section 3.—Deaths*

No official crude† death rates are available prior to 1921, but some indication of these may be obtained from studies of the early censuses as follows:—

Intercensal Period	Estimated Average Annual Crude Death Rate (per 1,000 Population)	Intercensal Period	Estimated Average Annual Crude Death Rate (per 1,000 Population)
1851–61.....	22	1891–1901.....	16
1861–71.....	21	1901–11.....	13
1871–81.....	19	1911–21.....	13
1881–91.....	18		

*For international comparisons, see Section 7, pp. 282–283.

† A crude rate is one based on the total population.

As is typical of pioneer populations, Canada had a high death rate in the mid-1850's when the country was still in the throes of pioneer settlement. The crude death rate during that period is estimated as between 22 and 25. Although no data are available, it is assumed that, while mortality at all ages was high, the rate among infants, children and young adults must have been particularly so since even in the 1920's mortality in these ages was still quite high. With the gradual increase in population density and in urbanization and improved sanitation and medical services, the crude rate was halved during the 80 years between 1851 and 1930, dropping from about 22 to 11. It declined steadily to slightly over 8 in the late 1950's, dropped to a low of 7.7 in 1961 and 1962, and was 7.8 in 1963. This is one of the lowest crude death rates in the world.

Table 1, pp. 243-244, shows the trends since 1941 in the provinces and territories. The generally low rates in the Prairie Provinces are partly the result of their younger average population; the uniformly higher rate in British Columbia is attributable mainly to a high proportion of people in the older age groups.

Subsection 1.—General Mortality

Age and Sex Distribution of Deaths.—During the period of national vital statistics (1921 to date), the mortality pattern at all ages has been steeply downward. Of major significance in lowering the over-all death rate were the reductions in infant mortality, in childhood death rates and in those of young adults. In 1931, over 19 p.c. of all male deaths occurred among persons of five to 45 years of age; in 1963 only a little over 10 p.c. took place in this age group. Among females in the same age group the proportion dropped from just under 22 p.c. to 7.5 p.c.

Tables 15 and 16 illustrate the very large reductions in death rates that have taken place since 1931 in each age group of the population. By far the greatest reductions have been among the young of both sexes. However, even though the rates for females at every age have always been consistently lower than those for males, female death rates have been declining faster and the differences are gradually widening. Between 1931 and 1963 the rates for all females dropped by 31 p.c. as compared with only 14 p.c. for males.

15.—Percentage Change in Death Rates for Each Age Group, 1931 to 1963

Age Group	Males	Females	Age Group	Males	Females
Under 1 year.....	-68.6	-69.2	45 — 49 years.....	-20.8	-50.0
1 — 4 years.....	-82.4	-85.2	50 — 54 ".....	-12.1	-43.3

40 — 44 ".....	-37.0	-58.0			
			All Ages.....	-14.3	-31.2

Despite the very considerable reduction that has taken place in infant mortality, more deaths still occur in the first year of life than in any other single year. Of the total deaths occurring in 1931, almost one quarter were of children under five years of age and more than three quarters of those were of children under one year of age; of the deaths occurring in 1963, almost 10 p.c. were of children under five years and of those about 86 p.c. were under one year. Most of the reduction took place among children over the age of one month but there was also a notable decrease in all childhood ages up to five years.

The reductions in the mortality rates in early and middle years of life have had the effect of increasing the number of people in the older age groups and raising the average age

at death. In 1931 the average age at death of males was 43.1 years and of females 44.8 years; by 1963 this had advanced to 60.5 years and 64.1 years, respectively. On the other hand, the median age increased during the same period from 50.8 to 68.2 for males, and from 52.1 to 72.9 for females. This means that *half* of all the females who died during 1963 were over 73 years of age, while for males half had reached 68 years. Since 1931 the gains in median age were 17.4 years for males and 20.8 for females.

Table 17 indicates the variations from province to province in average and median ages at death; these, in turn, are dependent in large measure on the age distribution of the population as well as on varying mortality rates at each age. For example, in Newfoundland a high mortality rate among infants and young children reduces the average and median age for that province, while the reverse is the case in British Columbia and several other provinces with older populations.

¹ The age above and below which half of the total number of annual deaths occurred.

Deaths in Urban Centres.—Table 2, pp. 245-247, shows the numbers of deaths in urban centres of 20,000 population or over in 1963 and the average numbers for the period 1956-60; death rates for urban centres cannot be computed for these years since their populations are not known for intercensal periods.

Causes of Death.—Table 18 summarizes the most recent figures for deaths and death rates in Canada grouped according to the International Abbreviated List of 50 Causes. Over 80 p.c. of the deaths are caused by diseases of the heart and arteries, cancer, accidents, diseases of early infancy, the respiratory diseases, and nephritis. Because of the rise in the average age at death during the past thirty years, the proportion of deaths from causes that affect older people has increased. Cancer and diseases of the cardiovascular-renal systems now account for a larger proportion of all deaths. By the same token, deaths from causes that mainly affect children and young adults have declined.

¹ Per 100,000 males.² Per 100,000 live births.

Accidents have displaced infectious diseases in recent years as one of the major killers. Table 19 shows clearly that accidents are, by far, the leading cause of death among males from age 1 to 45 and one of the five major causes above that age. Although less predominant among females, accidents are also one of the leading causes of female death beyond the first year of life.

¹Per 100,000 live births.

Subsection 2.—Infant Mortality

Table 1, pp. 243-244, and Table 20 show the striking improvement that has taken place in the rate of infant mortality during the past twenty years. Although 64,823 of the 2,368,986 children born in the five years 1959-63 died before reaching their first birthday, 157,862 others lived who *would have died* at the infant mortality rate prevailing in the period 1926-30. This improvement is attributable to many factors—the higher proportion of births taking place in hospital or under proper prenatal and postnatal care, better supervision of water supplies, improved sanitation, pasteurization of milk, the use of antibiotics, improved home environment as a result of higher living standards and, in recent years, the generally lower age of mothers.

The variations that exist in infant mortality rates from province to province and from one locality to another may be explained by differences in the extent to which these factors apply provincially or locally. Among the provinces, the 1963 male infant mortality rates ranged from a low of 26 to a high of 47, compared with the national average of 30—the latter including the very high rate among the Northwest Territories aboriginal population. Female rates ranged from 12 to 29, compared with the national rate of 23. While the national and provincial rates for both sexes have been declining steadily for some years, for some unknown reason there were a number of reversals in provincial rates recently.

Table 20 shows that mortality among male infants is 25 to 30 p.c. higher than that among female infants for Canada, with wider variations for the individual provinces. For the country as a whole, out of every 1,000 infant boys born alive in 1963, 30 died before reaching their first birthday, whereas out of every 1,000 infant girls born alive, 23 died within one year. As already pointed out, there are on the average 1,057 males born to every 1,000 females but, because male infant mortality is higher, the excess of males is reduced greatly by the end of the first year. For example, in 1960-63 there were 970,167 male children born compared with 919,544 female children, an excess of 50,623 or 5.5 p.c.; in the same period, 29,477 male children died during their first year compared with 21,751 female children so that the excess of males at one year of age was reduced to 42,897 or 4.7 p.c.

Infant Mortality in Urban Centres.—Because of the relatively small numbers of infant deaths in individual cities and towns, the rates for these centres usually vary widely

from year to year. As is evident from Table 2, pp. 245-247, many cities and towns have maintained consistently low rates as compared with the national rate or the rate for the province in which they are situated.

Causes of Infant Deaths.—In 1963 almost 70 p.c. of the infant deaths were caused by immaturity, congenital malformations, pneumonia, postnatal asphyxia and atelectasis, and injury at birth. Immaturity was the underlying cause of 2,348 and was an added complication in 2,972 others. Congenital malformations accounted for 2,068 fatalities, pneumonia for 1,506, postnatal asphyxia for 1,368 and injury at birth for 1,232. Rates for congenital malformations and birth injuries decreased in 1963.

Neonatal Mortality.—Deaths occurring within the first four weeks of birth are conventionally referred to as 'neonatal' deaths. Table 22 shows that over two thirds of all infant deaths occur in this hazardous neonatal period and, as would be expected, are caused mainly by conditions associated with pregnancy or delivery. Table 23 gives numbers and rates of neonatal deaths for 1941-63 and the chart on p. 270 compares the major causes of such deaths with all infant deaths from the same causes.

¹ Prior to 1951, includes deaths under one calendar month of age; since 1951, includes deaths under 28 days.

Perinatal Mortality.—‘Perinatal’ mortality—the combined total of stillbirths and deaths of live-born infants occurring ‘around’ the natal period—is a relatively new vital statistics concept. Since such deaths frequently have the same underlying causes, associated with pregnancy or delivery, regardless of whether they occur before or after delivery, perinatal deaths are generally considered as including the combined total of stillbirths occurring after at least 28 weeks pregnancy and deaths of live-born infants who fail to survive the first week of life.

In 1963 there were 13,205 such ‘deaths’, of which 5,732 were stillborn and 7,473 live-born but failed to survive one week, with a national rate of 28.0 such deaths for every 1,000 total deliveries. This perinatal rate has declined very slowly, but steadily, from 65.2 in 1921 to 28.0 in 1963.

Subsection 3.—Maternal Mortality

As indicated in Table 1, pp. 243-244, the number of mothers who die in pregnancy and childbirth has been greatly reduced during the past two decades. Although the number of births has been much greater in recent years, the number of maternal deaths declined almost steadily from 1940 (when there were 978 deaths and a rate of 40 deaths for every

10,000 births delivered alive) to an all-time low of 165 in 1963. Since 1951 the rate of maternal mortality has been under 10 and since 1959 it has been under five. Despite this improvement, Canada's maternal death rate (3.5 in 1963) is higher than the rates for several other countries such as Sweden (2.1), Norway (2.1), Denmark (2.2) and New Zealand (2.9). Mortality among unmarried mothers is higher than among married mothers.

Causes of Maternal Deaths.—Table 24 shows the main causes of maternal deaths during the years 1961-63.

24.—Maternal Mortality and Rates per 100,000 Live Births, by Cause, 1961-63

	Totals, All Puerperal Causes	219	191	165	46	41	35

Of the 165 maternal deaths in the latest year, 43 resulted from complications arising during pregnancy, about half of these from some type of toxæmia; 67 resulted from a

complication of delivery, 28 from a post-delivery complication and 27 from abortive delivery. There has been an encouraging drop in maternal deaths caused by toxæmia during the past three or four years.

Age at Death.—Table 25 shows the distribution of maternal deaths by age group; the average age at death is about four years higher than the average age of all mothers at the time of childbirth. Until recent years, the risk of mortality at childbirth was directly related to the age of the mother—in other words, for all mothers of over 20 years the rate rose with increasing age. While death rates for all age groups of mothers have been declining, there have been rather significant changes in the rates. Formerly, the rate for mothers in the age group 30-34 was twice or three times as high as the rate for the 20-24 group, but recently mortality rates for the four age groups of mothers under 35 years of age have not been far apart, although after age 35 a sharp rise occurs.

Section 4.—Natural Increase*

The excess of births over deaths, commonly referred to as natural increase, is a very important factor in the growth of a population. Although the collection of Canadian birth and death statistics began only in 1921, some idea of the rate of natural increase in the early Canadian population may be learned from the estimates shown at the beginning of Sections 2 and 3, which resulted in the following natural increase rates:—

Intercensal Period	Estimated Average Annual Natural Increase Rate (per 1,000 Population)	Intercensal Period	Estimated Average Annual Natural Increase Rate (per 1,000 Population)
1851-61.....	23	1891-1901.....	14
1861-71.....	19	1901-11.....	18
1871-81.....	18	1911-21.....	16
1881-91.....	16		

Because of the combination of high birth rates and declining death rates—despite the fact that death rates were still relatively high—the annual rate of natural increase during the late 1800's and early 1900's varied between 14 and 23; in other terms, the population increased at the rate of 1.5 p.c. to 2.5 p.c. each year by natural increase alone, regardless of any increase attributable to immigration. During the 1920's and early 1930's the birth rate declined more than the death rate and the natural increase rate dropped to a record low of 9.7 in 1937. But higher birth rates during and after World War II and a gradually declining death rate caused the natural increase rate to rise steadily from 10.9 in 1939 to a record 20.3 in 1954. Although after that year there has been a steady drop because of declining birth rates, the natural increase rate still was quite high at 16.8 in 1963.

Table 1, pp. 243-244, gives average rates of natural increase in the provinces for five-year periods 1941-60 and Table 26 gives the provincial figures for males and females separately for 1941, 1951 and 1961-63. High birth rates and declining death rates have given Newfoundland, Alberta, New Brunswick, Quebec and Saskatchewan the highest rates of natural increase in Canada in recent years (excluding the Yukon and Northwest Territories).

* For international comparisons, see Section 7, pp. 282-283.

¹ Excludes Newfoundland and the Yukon and Northwest Territories.

The rates of natural increase are higher for females than for males in all provinces because of the higher death rates for males. In the western provinces particularly, the ratio of males to females in the total population is higher than in other parts of Canada and this in itself tends to lower the rate of natural increase. In Canada, a country with a fairly young population and where immigration has been on a large scale, an excess of males is to be expected but the higher rate of natural increase for females may gradually reduce this excess. The trend is toward an eventual excess of females in the total population—as there now is in most European countries—unless immigration again raises the male ratio or death rates among males are greatly reduced.

Natural Increase in Urban Centres.—The classification of births and deaths by place of residence makes it possible to compile the natural increase in the population of urban centres; the figures for centres of over 20,000 population are presented in Table 2, pp. 245-247.

Section 5.—Marriages and Divorces

Subsection 1.—Marriages*

In 1963 Canada's crude marriage rate was 6.9 per 1,000 population, the lowest since 1934. Provincial rates varied from 6.4 per 1,000 population for Prince Edward Island to 7.2 for Alberta and New Brunswick.

Table 27 gives the number of marriages and the marriage rates for Canada and the provinces for 1941, 1951 and the three consecutive years 1961-63, together with percentages of brides and bridegrooms according to place of birth. For the country as a whole, over 83 p.c. of the bridegrooms of 1963 were born in Canada and over 69 p.c. in the province in which they were married; almost 87 p.c. of the brides were born in Canada and 75 p.c. in the province in which they were married. During the postwar years until 1959 an increasing number of marriages were of persons born outside the country, because of the heavy immigration of young persons. However, since 1959 the proportion of foreign-born bridegrooms declined from 19.6 to 16.5 p.c. in 1963 and the proportion of foreign-born brides from 15.9 to 13.1 p.c. There are wide variations in the pattern of intermarriage of foreign-born and native-born persons as between provinces; in the older Atlantic Provinces and in Quebec there is a greater tendency than in the other provinces to marry native Canadians and in these areas both partners are often born in the same province.

* For international comparisons, see Section 7, pp. 282-283.

Age and Marital Status of Brides and Bridegrooms.—Table 28 shows that 90.9 p.c. of the brides and 91.4 p.c. of the grooms in 1963 had never previously married, while 5.0 p.c. of the brides and 4.4 p.c. of the bridegrooms had been widowed. The average age

at marriage of bachelors was just under 26 years and that of spinsters just under 23 years. The average age of widowers and widows at time of remarriage was slightly more than double that of bachelors and spinsters.

Religious Denominations of Brides and Bridegrooms.—The distribution of brides and bridegrooms by religious denominations is roughly the same as that for the population as a whole. Table 29 shows the very strong influence that religion has on marriage. About

70 p.c. of all marriages are between persons of the same religious denomination; in 1963 among those of Jewish faith it was about 90 p.c.; among Roman Catholics about 87 p.c.; United Church about 59 p.c.; and Eastern Orthodox about 63 p.c.

Subsection 2.—Divorces

Before World War I the number of divorces granted in Canada was very small, and represented less than one per 1,000 of the yearly number of marriages. After that War, however, there was a definite upward trend; the number advanced to 8,213 in 1947, declined gradually to a postwar low of 5,270 in 1951 and from 1953 to 1963 fluctuated between 5,923 and 7,686. The 1964 preliminary figure of 8,589 was the highest on record.

30.—Dissolutions of Marriage (Divorces), by Province, 1941-64

NOTE.—Figures for individual years from 1900 to 1953 are given in the 1956 Year Book, p. 230, and for 1954-60 in the 1965 edition, pp. 263-264.

Section 6.—Canadian Life Tables

Five official series of life tables for Canada and the provinces and regions have been published to date, based on deaths in the three-year period around each of the Censuses of 1931, 1941, 1951, 1956 and 1961. The life table values for 1961 are given in abbreviated form in Table 31.

Life tables give some measure of the health and general conditions of survival of an 'artificial' population in a conventional, standard form. A hypothetical number (100,000) of births of each sex is assumed as a starting point. The life tables show how, on the basis of the mortality rates at each age in the given years, these 100,000 of each sex are reduced in number by death. For example, during the year 1961, of 100,000 males born, 3,058 would have died in their first year, according to the mortality rates in effect during the period 1960-62, so that 96,942 would survive to one year of age; 179 would have died in their second year so that 96,763 survived to two years of age, and so on. At 100 years of age only 105 of the original 100,000 would have survived. The probability of death at each age is the ratio between the number of deaths and the population at each age. Finally, the expectation of life is the number of years which a person on the average might expect to live if the mortality rates in the given years remained constant throughout his lifetime.

Mortality rates at all ages for males have been almost consistently higher than for females. Males have the highest risk of mortality as compared with females during their first year of life, from their late 'teens to early 30's and from age 50 to 65. For both boys and girls the risk of mortality drops rapidly during childhood and is lowest at about age 10, increases gradually to about age 40 for males and about 50 for females and then rises steeply with advancing age. As an illustration of the information available from study of the life tables, it may be observed that at the mortality rates given in the 1961 life table (see Table 31) about 12,100 males would have died before reaching age 50 as compared with about 7,600 females; only 57,517 of the original group of 100,000 males would have survived to age 70 as compared with 72,746 females.

By 1961, life expectancy *at birth* in Canada had reached a new high point of 68.4 years for males and about 74.2 for females—comparable to the expectancy for other countries of the world with highly developed programs of medical and public health care. Once a child has passed its first year of life, however, its life expectancy increases appreciably. At one year of age a male child *at present mortality risks* may, on the average, expect to live an additional 69.5 years and a female almost 75 years, representing for an infant boy a gain of 1.2 years over his expectation at birth and for an infant girl a gain of 0.8 years. The expectation of life of a 15-year-old boy is 56.2 additional years; of a 15-year-old girl 61.5 years. At 25 years of age the expectation is about 46.9 years for men and 51.8 years for women and at age 70, 10.7 years for men and 12.6 years for women.

Table 32 summarizes the life expectancy figures extracted from the Canadian life tables for 1931, 1941, 1951, 1956 and 1961. According to these figures, life expectancy at birth for men increased about three quarters of a year between 1956 and 1961 and 1.3 years between 1951 and 1956, compared with 3.4 years from 1941 to 1951 and 2.9 years from 1931 to 1941; females gained one and one quarter years between 1956 and 1961 and 2.1 years between 1951 and 1956, compared with 4.5 years and 4.2 years, respectively, in the preceding decades. Thus, from 1931 to 1961 a total of 8.4 years was added to male life expectancy and 12.1 years to female longevity.

The increases in life expectancy have been predominantly at the younger ages, particularly in infancy, and diminish with advanced age. For example, since 1931, 3.5 years have been added to the life expectancy of a five-year-old male, 2.5 years to a 20-year-old, about one year to a 40-year-old and about half a year to a 60-year-old as compared with 8.4 years for a newborn male. During this period, life expectancy for a five-year-old female gained 8.1 years, for a 20-year-old 6.9 years, for a 40-year-old 4.4 years and for a 60-year-old two and three quarter years as compared with 12.1 years for a newborn female.

Longevity has improved for both sexes, though more so and at all ages for females, but there has been only slight improvement for males beyond middle life. Briefly, the rapid decline in the death rate for infants of both sexes is continuing but the declines are slower with advancing age, so that relatively stationary death rates have been established from about 50 years onward for males and from about 80 years onward for females.

The fact that such a pattern exists is important in interpreting the results of these life tables. The arbitrary population base of 100,000 of each sex in the 1956 tables, for example, has been subjected to the mortality rates in effect in 1960-62, and the life expectancy computed *as if those death rates at each age were to prevail during their lifetime*. Actually the theoretical 200,000 infants born in 1960-62 will most probably have a pattern of survival and life expectancy quite different from that of the present life tables as they will spend most of their lives under conditions of public health and medical care which in all likelihood will be superior to those prevailing in 1960-62.

The improvement in life expectancy, particularly among children and adolescents, is caused mainly by the substantial reduction in recent years in mortality from infectious diseases; on the other hand, diseases associated with middle and old age are much less amenable to control. It is therefore unlikely that improvement in life expectancy in the future will be comparable to that of the past 30 years. As approximately 9 p.c. of deaths in 1960-62 occurred among infants and an additional 77 p.c. among persons over age 50, any additional improvement must come as the result of further declines in mortality from conditions associated with childbirth and early infancy, further control of infectious diseases, prevention of accidents, and advances in combating diseases associated with middle and old age, such as cardiovascular-renal conditions and cancer.

Table 33 shows provincial or regional life expectancy for males and females at selected ages. According to the 1961 figures, male life expectancy at birth continues to be below 70 and that for females above 72 in all of the five regions. During the period 1931-61, life expectancy at birth for males increased from 60.00 to 68.35, or 8.35 years, varying from 6.32 years for the Prairie Provinces to 11.09 years for Quebec; life expectancy at birth for females rose from 62.10 to 74.17, or 12.07 years, varying from 10.08 years for British Columbia to 14.97 years for Quebec. Quebec has shown the greatest improvement of any region among young males and females and middle-aged females, and British Columbia has shown the greatest improvement among middle-aged males.

Section 7.—International Comparisons of Vital Statistics

Table 34 gives a summary of Canada's national and provincial vital statistics rates along with those of several other countries. It will be noted that among the countries listed the low crude death rate in Canada is bettered by three countries—Venezuela, Japan and the Union of Soviet Socialist Republics—and that some of the provinces have lower rates than most other countries. The birth rate also helps to give Canada one of the fastest growing populations, currently ranking seventh among those listed. However, 13 countries reported lower or equal rates of infant mortality, some as low as 15 or 16 per 1,000 live births (Sweden and Netherlands), as compared with Canada's rate of 26.

34.—Principal Vital Statistics Rates of Selected Countries, 1963

Note.—Countries are ranked according to the highest rates for births, marriages and natural increase and according to the lowest for deaths.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

Canada's growth as an industrial nation has created many new problems in the planning of health and welfare services. While a higher level of income and living standards lessens the danger of health impoverishment, changing social conditions resulting from general prosperity are forcing new priorities in health and welfare planning. With the continued influx of people to the cities, problems of adequate housing, recreation, health and welfare services for the aged and other aspects of community planning require more urgent consideration. At the same time, problems associated with the rendering of

* Except where otherwise indicated, this Chapter was prepared (August 1965) by the Research and Statistics Division of the Department of National Health and Welfare, Ottawa.

services to a proportionately decreasing rural population and to the sparsely settled northern expanses severely tax the available resources of health and welfare personnel and public health and public welfare administration.

During 1964-65, the Royal Commission on Health Services published the results of its enquiry into the present status of health services in Canada.* It declared that, for the nation to achieve its health goals, a universal, comprehensive, health services program should be available to all Canadians. The Federal Government, responding to this report, proposed in 1965 that a comprehensive medical care program be introduced. In opening a Federal-Provincial Conference in July 1965 the Prime Minister said that "Canadian attitudes and Canadian economic standards have now developed to the point at which we are ready to regard medicare as a part of Canada's basic social standards. It is now the responsibility of the Federal Government to co-operate with the provinces in making medicare financially possible for all Canadians". Earlier in the year (March) British Columbia had passed the Medical Grant Act and Ontario had passed (June) the Medical Services Insurance Act; both these Acts provide for provincial subsidies to assist residents with taxable incomes of less than \$1,000 a year in paying the premiums required to purchase medical care insurance from an approved medical insurance carrier.†

In November 1964, the Federal Government introduced a Bill "to establish a comprehensive program of old age pensions and supplementary benefits in Canada payable to and in respect of contributors". After second reading this Bill was referred to a Special Joint Committee of the Senate and House of Commons set up to study it. The Committee held 51 sittings from Nov. 24, 1964 to Feb. 8, 1965 and heard 116 witnesses. In its final report the Committee recommended a few changes in the Bill, most of which were accepted by the Government. The House of Commons debated the Bill from Feb. 22 to Mar. 29, and the Canada Pension Plan received Royal Assent on Apr. 3, 1965. Before the Bill was introduced, a series of meetings had been held between federal and Quebec officials from May to October 1964 in order to integrate the details of the Canada Pension Plan and the Quebec Pension Plan. The Quebec Pension Plan was assented to and became effective on July 15, 1965. The revised Ontario Pension Benefits Act, which regulates the operations of private pension plans in the province, was proclaimed on July 30, 1965.

With the April 1965 Throne Speech, Canada embarked on its own "War on Poverty", a program for the full utilization of human resources and the elimination of poverty. Included in the program will be an expansion of the Area Development Program (ADA) and the Agricultural Rehabilitation and Development Program (ARDA),‡ measures to assist the re-employment, relocation and retraining of workers, urban renewal measures, the establishment of a Company of Young Canadians to undertake projects for economic and social development in Canada and abroad, and the establishment of a Canada Assistance Plan. This last will be a companion to the Canada Pension Plan, designed to assist people now retired, disabled, widowed or otherwise in need who will not be able to participate in the contributory pension plan. Provincial programs for persons in need will be financially supported by federal cost-sharing arrangements.

During 1964-65, public and voluntary agencies and interested individuals were actively engaged in the preliminary work for the Canadian Conference on Aging, sponsored by the Canadian Welfare Council, to be held in January 1966 in Toronto. The Special Committee of the Senate on Aging, formed in 1963 to study various aspects of the needs of older people including their housing, health and institutional care, social services, community participation and recreation, held hearings from February 1964 into December 1964. The report of the committee was in preparation at the time of writing (August 1965).

Of particular interest in the area of family welfare was the Canadian Conference on the Family, convened by Their Excellencies, Governor General and Madame Vanier, and held in Ottawa in June 1964. The Conference recommended the formation of an Institute of the Family to stimulate and foster study of the family, to constitute a medium of continuous action in favour of the family, as well as a meeting ground and channel of commu-

nication for groups and individuals actively concerned with the well-being of Canadian families. The Vanier Institute of the Family—L'Institut Vanier de la famille—was subsequently established and incorporated on Apr. 8, 1965.

PART I.—PUBLIC HEALTH

Provincial governments bear the major responsibility for health services in Canada, with the municipality often assuming considerable authority over matters delegated to it by provincial legislation. The Federal Government has jurisdiction over a number of health matters of a national character and provides important financial assistance to provincial health and hospital services. All levels of government are aided and supported by a network of voluntary agencies working in different health fields.

Section 1.—Federal Health Activities

The Department of National Health and Welfare is the chief federal agency in health matters but important treatment programs are also administered by the Departments of Veterans Affairs and National Defence. The Dominion Bureau of Statistics is responsible for collection, analysis and publication of national health statistics, the Medical Research Council and the Defence Research Board administer medical research programs, and the Department of Agriculture has certain health responsibilities connected with food production.

The Department of National Health and Welfare controls food and drugs, including narcotics, operates quarantine and immigration medical services, carries out international health obligations, and provides health services to Indians, Eskimos and other special groups. It advises on the visual eligibility of applicants for blindness allowances and co-operates with the provinces in the provision of surgical or remedial treatment for recipients of the allowances. Under the Public Works Health Act, supervision of health conditions is provided for persons employed on federal public works. Health counselling and medical supervision are provided for the federal Civil Service. The Department also administers the civil aviation medical program for the Department of Transport.

The Department serves the provinces in an advisory and co-ordinating capacity and administers grants to provincial health and national voluntary agencies. Administration of federal aspects of the Hospital Insurance and National Health Grant Programs has become a major activity during the past decade.

Co-ordination with the provinces on health matters is facilitated by the Dominion Council of Health, the principal advisory agency to the Minister of National Health and Welfare. Its membership includes the Deputy Minister of National Health, who acts as chairman, the chief health officer of each province, and five appointees of the Governor in Council. The Council meets semi-annually. Federal-provincial technical advisory committees of the Council deal with specific aspects of public health.

Subsection 1.—The Royal Commission on Health Services

Focusing on the theme that "all the fruits of the health sciences" should be made "available to all our residents without hindrance", the Royal Commission on Health Services, chaired by Chief Justice Emmett M. Hall of Regina and also including a nurse, a dentist, an economist, a financier and two physicians, brought out a two-volume report* in 1964 and 1965 setting out its findings and 256 detailed recommendations. Public hearings were conducted in every province, 406 briefs received and a number of special studies commissioned.

The terms of reference of the Hall Commission, as it became known, were to inquire into and report upon: methods for providing health services and their correlation and

* *Royal Commission on Health Services 1964—Vol. I.* \$10 and . . . *1965—Vol. II.* \$5. Queen's Printer (Catalogue Nos. Z1-1961/3-1 and Z1-1961/3-2, respectively).

improvement: personnel and training; physical plant; costs and methods of financing; medical research; priorities; and "such other matters as the Commissioners deem appropriate".

The central recommendation was that "comprehensive, universal, provincial programmes of personal health services, with similar arrangements for the Yukon and Northwest Territories" be introduced, covering medical services, prescription drug services, prosthetic services and home care services, as well as optical and dental services for recipients of public assistance and for children, and dental services for expectant mothers. It was also recommended that a Health Facilities Development Fund be set up to expand the physical plant of Canada's health industry, and that Professional Training Grants be offered to increase the number of trained personnel available.

Subsection 2.—National Health Grant Program

The National Health Grant Program, inaugurated in 1948, makes federal grants available to the provinces for the developing and strengthening of public health and hospital services. Changes were made over the years to provide additional funds, increase flexibility and meet changing circumstances. Some of the headings under which grants had been made were merged or discontinued and new headings were added (see Table 1). During the year ended Mar. 31, 1965, the following Health Grants were in force: Hospital Construction, Mental Health, Tuberculosis Control, Cancer, Medical Rehabilitation and Crippled Children, Professional Training, Public Health Research, Child and Maternal Health, and General Public Health.

Up to Mar. 31, 1965, aid for hospital construction had been approved for 117,015 beds and 14,901 bassinets for patients, 22,555 beds for nurses, and 918 beds for interns. Approximately 42,000 health workers had been trained or were undergoing special training, and more than 7,000 health workers were employed, with Health Grant assistance. The amount expended in 1964-65 totalled \$56,699,708 or 86 p.c. of the total available; over the entire 17 years of the program, 79 p.c. of the available money had been actually spent.

1.—Amounts Available and Amounts and Percentages Expended under the National Health Grant Program, by Grant, for the 17-year Period Ended Mar. 31, 1965 and for the Year Ended Mar. 31, 1965.

² and ⁶.

Subsection 3.—Hospital Insurance

The federal-provincial hospital insurance program, now established in all provinces and territories, covers 98.4 p.c. of the total population of Canada. This program was introduced under the federal Hospital Insurance and Diagnostic Services Act of 1957, by which the Federal Government shares with the provinces the costs of specified hospital services to insured patients. The choice of methods of financing and administering the program at the provincial level, and the choice of the types of service offered above the minimum stipulated in the Act, rest with provinces.

Federal legislation covers only services in institutions approved to provide acute, chronic and convalescent care. Tuberculosis and mental hospitals are excluded from the federal-provincial plan, as are institutions providing custodial care. However, the psychiatric and tuberculosis units of general hospitals are included.

The basic range of in-patient benefits that, under the Act, each province is required to provide includes standard ward accommodation and meals, nursing service, drugs and biologicals, surgical supplies, the use of operating and case rooms, diagnostic procedures (including X-ray and laboratory procedures) together with necessary medical interpretations, and the use of radiotherapy and physiotherapy facilities where available. The same benefits for out-patients, although authorized for assistance under the federal legislation, are not mandatory upon provincial plans. All provinces except one provide, under the plan, insured out-patient services. The pattern varies from province to province but among the services offered are emergency care following accidents, diagnostic services and therapeutic services, including minor surgical and medical procedures. Some provinces provide certain psychiatric out-patient services.

Provinces use different methods of administering and financing their programs; money raised through general revenues, provincial sales taxes and personal premiums may be used separately or in combination.* The Federal Government pays each province 25 p.c. of the per capita cost of in-patient services in Canada as a whole plus 25 p.c. of the per capita cost of in-patient services in the province, multiplied by the average for the year of the number of insured persons in the province. On a national basis, the federal contribution amounts to about 50 p.c. of sharable costs. However, for individual provinces the proportion of sharable costs met by the Federal Government varies, with a higher proportion of the cost of low-cost programs than of high-cost programs being met. Federal payments to the provinces under the program from July 1, 1958 to Dec. 31, 1964 totalled over \$1,700,000,000. During 1964, federal payments to the individual provinces and territories totalled \$408,000,000, divided as follows: Newfoundland, \$9,200,000; Prince Edward Island, \$2,000,000; Nova Scotia, \$15,500,000; New Brunswick, \$13,000,000; Quebec, \$117,200,000; Ontario, \$144,500,000; Manitoba, \$20,000,000; Saskatchewan, \$22,200,000; Alberta, \$29,600,000; British Columbia, \$34,000,000; Yukon Territory, \$330,000; and the Northwest Territories, \$560,000.

Tables 2 and 3 give data for hospitals listed in the federal-provincial hospital insurance agreements. The bulk of the hospitals listed in those agreements are "budget review" hospitals, which are subject to provincial budget-approval. Budget review hospitals include publicly owned general hospitals providing acute or short-term care and special hospitals such as pediatric, maternity, orthopedic and chronic hospitals. Also listed in the agreements are "contract" and federal hospitals. "Contract" hospitals are private and industrial hospitals that provide insured hospital care at a contractually agreed rate per patient day.

The 1,291 hospitals, in all three categories listed in the federal-provincial agreements, reported having a total of 129,158 beds and cribs set up at the end of 1963, a rate of 6.8 beds per thousand population. Provincial rates ranged from 5.0 in Newfoundland to 8.6

* Hospital insurance is financed in the following ways: (1) general revenues only—Quebec, Newfoundland, Prince Edward Island, New Brunswick, Yukon Territory and the Federal Government; (2) general revenues plus a daily charge at time of service—British Columbia, Alberta and the Northwest Territories; (3) sales tax only—Nova Scotia; (4) premiums, sales tax and other general revenues—Saskatchewan; and (5) premiums, with subsidies from general revenues—Ontario and Manitoba.

in Alberta, and territorial rates were even higher. The total number of patient-days per thousand population in 1963 also varied considerably from province to province; that for Canada was 1,993.4, considerably lower than those in Saskatchewan and Alberta but much higher than the rate in Newfoundland. In 1963, 90.1 p.c. of all patient-days in hospitals were paid for under the federal-provincial plan.

2.—Number of Beds and Crib in Hospitals Listed in Hospital Insurance Agreements, with Rate per 1,000 Population, by Province, as at Dec. 31, 1963

Province or Territory	No. of Hospitals Reporting	Beds and Crib	
		Number	Rate ¹

Alberta.....	155	3,374,968	2,402.1	3,116,612	1,979.7
British Columbia.....	111	3,392,515	2,001.5	2,808,885	1,652.5
Yukon Territory.....	5	26,626	1,775.1	20,126	257.5
Northwest Territories.....	26	74,145	3,089.4	42,596	413.0
Canada.....	1,296	37,667,120	1,993.4	33,942,627	1,718.9

¹ Per 1,000 total population; based on intercensal population estimates as at June 1, 1963.

² Per number of insured persons under provincial plans.

The operating cost of budget review hospitals in Canada in 1963, as shown in Table 4, including items of expense and costs of services not covered under the hospital insurance program, amounted to \$878,103,000. Salaries and wages accounted for 63.9 p.c. of that total; medical supplies for 3.1 p.c., drugs for 3.9 p.c., raw food for 5.6 p.c., other departmental supplies and expense for 16.2 p.c., and other expense items (consisting mainly of interest payments and depreciation allowances) for the remaining 7.4 p.c.

In 1963, the total per capita operating cost of budget review hospitals in Canada was \$46.47, ranging among the ten provinces from \$28.84 in Newfoundland to \$50.56 in Ontario. The provincial variations are due in part to differences in the number of patient-days per thousand population and in the range of hospital care that is provided.

¹ Includes fuel, electricity, water, insurance, replacements of bedding and linen, laundry supplies, housekeeping supplies, repairs to buildings, furniture and equipment, maintenance of physical plant, and office supplies and services.

² Includes other revenue fund expense.

³ Based on patient-days during year for adults and children.

⁴ Based on intercensal population estimates as at June 1, 1963.

Subsection 3.—Food and Drug Control

The Food and Drugs Act is a federal statute with provisions applying to the manufacture, advertising, packaging and sale of foods, drugs, cosmetics and medical devices anywhere in Canada. Wide powers are authorized under this legislation to maintain the safety, purity and quality of food and drug products and to prevent misrepresentation in labelling and advertising. There are prohibitions, for example, on the sale of food or drugs that do not meet prescribed standards, are harmful, adulterated, dirty, improperly stored, or manufactured under unsanitary conditions. The Act also prohibits the advertising of any food, drug, cosmetic or medical device as a preventive or cure for a number of serious diseases and also lists drugs that may be sold only by prescription.

Standards of safety and purity are maintained through constant and widespread inspection and laboratory research. The inspection of food-manufacturing establishments assures the production of clean, wholesome foods containing ingredients that meet recognized standards. Changing food technology requires the development of methods of laboratory analysis to assure the safety of new types of ingredients and packaging materials. The Food and Drug Regulations were amended in 1964 by the addition of sections listing chemical additives that may be used in foods, the amounts that may be added to each food and the underlying reason. The effect of new packaging and processing techniques on the bacteria associated with food spoilage is another matter of special concern. Since the Food and Drugs Act is intended for the protection of consumers, a section of the Food and Drug Directorate obtains consumer opinions, deals with individual consumer complaints and provides sound information on which consumers may base opinions.

Drug standards are subject to continuous review and testing. Detailed information on all new drugs must be reviewed by the Directorate to determine compliance with requirements before release for sale is permitted. In 1963 important regulations were issued, one setting standards operative in all drug manufacturing facilities and the second prescribing additional safeguards in the distribution of investigational drugs. Drug manufacturing requirements relate to sanitation of facilities, employment of qualified personnel,

testing to ensure standards of quality and safety at stated stages of processing, maintenance of records of testing performance, together with a system of control to enable a complete and rapid recall of any lot or batch of drugs from the market. The new controls over clinical trials and marketing of new drugs carry out provisions of the Food and Drugs Act amendment passed in 1962. Detailed information must be submitted to the Directorate concerning the method of manufacture, the tests applied to establish standards of safety and quality, and substantial evidence of the clinical effectiveness of the new drug for the purposes stated. Samples of the final product must also be submitted. Before putting a product into clinical testing, a manufacturer also must file complete data on the experience with the drug including any evidence of adverse side effects, and the qualifications of the persons to be engaged in its experimental use. If from this evidence a new drug is considered not in the interest of public health, the Minister may suspend the proposed clinical testing, in which case the manufacturer has the right to appeal the decision. Drugs expressly prohibited from sale are thalidomide and lysergic acid diethylamide, except under certain conditions as specified in the regulations, whereby sale by a manufacturer to an institution for clinical use or laboratory research by qualified investigators may be approved by the Minister. Any drug that can be classed as a sedative, hypnotic or tranquillizer is listed to be sold only on prescription. The licensing of persons dealing in certain drugs classed as barbiturates and amphetamines is required as well as the keeping of special records and the limitation of their use to medical purposes.

The Food and Drug Directorate also administers the Proprietary or Patent Medicine Act, which is concerned with the registration before marketing and the annual licensing of secret-formula medicines sold under proprietary or trade names.

Early in 1965 the Directorate initiated an adverse-drug-reaction reporting program in 16 teaching hospitals across Canada to recognize and investigate unexpected reactions to drugs. The co-operation of the medical, dental, veterinary and pharmaceutical professions was solicited in advising the Directorate of such reactions in private practice. Close liaison is maintained with the World Health Organization and other authorities in foreign countries for the prompt reporting of such reactions.

Regulation of the supply and use of narcotic drugs is carried out under the Narcotic Control Act, as revised in 1961. This legislation prescribes a maximum penalty of seven years with no minimum for illegal possession; a maximum penalty for trafficking of life imprisonment; and minimum and maximum penalties for illegal export and import of seven years and life imprisonment, respectively. Persons convicted of offences under the Act who are found to be drug addicts may be sentenced for treatment, for an indeterminate period, in institutions operating under the penitentiaries system and the National Parole Board service, when Part II of the Act comes into force.

Subsection 5.—Medical Services

The Department of National Health and Welfare provides nine types of direct medical service through the Directorate of Medical Services. These are described in the following paragraphs.

Indians and Eskimos.—Responsibility for the general welfare, education and medical care of Indians is shared with the Indian Affairs Branch of the Department of Citizenship and Immigration, and of Eskimos with the Department of Northern Affairs and National Resources. The Department of National Health and Welfare provides medical and public health services to registered Indians or Eskimos who are not included under provincial arrangements and who are unable to provide for themselves. A large volume of the service in treatment and health education is rendered to patients through departmental out-patient clinics staffed by medical and other public health personnel. In remote areas, the key facility is frequently the departmental nursing station, a combined emergency treatment and public health unit having two to four beds under the direction of one or two nurses: about 44 of these are operated throughout Canada.

Wherever practicable, there has been an increasing integration of Indians into provincial and municipal health agencies. The Department correspondingly reduces the number of hospitals and other facilities provided specifically for Indians. At present, the Department maintains 18 hospitals at strategic points and co-operates elsewhere with community, mission or company hospitals. Indians are now included under all provincial prepaid insurance plans for hospital care and other forms of insured medical care but in almost all cases the total cost of mental and tuberculosis care is directly borne by the Federal Government. Indian and Eskimo health workers are trained to give instruction in health care and sanitation.

Northern Health.—Because of the special problems in developing health services in the Far North, the Directorate of Medical Services has been given the responsibility of co-ordinating federal and territorial health care for all residents. In so doing, the Department undertakes the functions of a health department for the Council of the Northwest Territories and assists the territorial government of the Yukon Territory to provide certain health services. Close liaison is maintained with the federal departments directly responsible for administrative matters affecting these areas.

In the Yukon Territory, services for the total population administered through the Commissioner for the Yukon and provided on a cost-sharing basis with the Department of National Health and Welfare include complete treatment for tuberculosis, payment for services rendered at the Alberta cancer clinics, mental hospital care through arrangements with the Province of British Columbia, and medical care for indigent patients. Public health nursing services, measures for control of communicable diseases, and administration of the principal public hospital are primarily the responsibility of the Medical Services of the Department of National Health and Welfare. Similar services are provided in the Northwest Territories, the costs being shared by the Department of Northern Affairs and National Resources and the Department of National Health and Welfare. Indigent residents are eligible for medical, dental and optical services as well as for tuberculosis and mental care.

Sick Mariners.—The Department of National Health and Welfare provides compulsory prepaid medical, surgical, hospital and other treatment services to crew members of all foreign-going ships arriving in Canada and Canadian coastal vessels in interprovincial trade, and provides medical, surgical and treatment services on an elective basis to crew members of Canadian fishing and government vessels. Canadian seamen obtain their hospital care under the provincial hospital insurance plans.

Leprosy.—Since 1960, isolation and treatment of persons suffering from leprosy have been arranged in their home neighbourhoods. Under the provisions of the Leprosy Act, facilities for the diagnosis and treatment of leprosy are provided in a six-bed unit of the Hôtel-Dieu Hospital at Tracadie, N.B.

Quarantine.—Under the Quarantine Act, all vessels, aircraft and other conveyances together with their crew members and passengers arriving in Canada from foreign countries are inspected by the quarantine officers to detect and correct conditions that could lead to the entry into Canada of such diseases as smallpox, cholera, plague, yellow fever, typhus and relapsing fever. Fully organized quarantine stations are located at all major seaports and airports.

Immigration.—Under the Immigration Act and the Department of National Health and Welfare Act, the Immigration Medical Service conducts in Canada and other countries the medical examination of all applicants for immigration to Canada and also provides treatment for certain classes of persons after arrival in Canada, including immigrants who become ill en route to their destination or while awaiting employment.

Civil Service Health Counselling.—Health counselling is offered through major Medical Services units to federal employees throughout the country. This service is primarily diagnostic and advisory only but emergency treatment can also be given. The Civil Service Health Counselling Division also examines civilian aviation personnel and advises on standards of physical fitness required for them.

Aerospace Medicine.—Research on civil aerospace medicine is conducted by the Department in close liaison with the National Research Council, the Defence Research Board and the Royal Canadian Air Force Institute of Aviation Medicine.

Regulation of Hygienic Standards.—The Department of National Health and Welfare is responsible for regulating hygienic standards on federal property.

Subsection 6.—Radiation Protection

A comprehensive radiation protection program has been developed in Canada in response to the rapidly increasing use of radioactive materials, X-ray equipment and nuclear reactors in medicine, industry and research, and to increasing concern about radiation from atmospheric testing of nuclear weapons, from medical X-ray procedures and from natural sources.

Because of technical complexity in this new field and the early necessity of imposing national controls over dealings with uranium and by-product materials, the Federal Government has developed health and safety control procedures for the handling and use of all radioactive materials. This program is implemented through the close collaboration of federal and provincial health departments supported by special advisory committees.

Acting under the federal Atomic Energy Control Regulations, the Department of National Health and Welfare reviews all applications received for radioisotope licences and recommends appropriate health and safety conditions. The Department also provides services for measuring and recording the personal radiation exposures of workers handling X-ray, gamma-ray and neutron sources. Inspection of licensed establishments is carried out by federal or provincial inspection officers. Although there is no federal regulatory authority to provide health and safety supervision over the use of X-rays, the Department of National Health and Welfare has established a committee on the development of X-ray safety standards to recommend uniform standards and procedures throughout Canada. Five provinces (Nova Scotia, Quebec, Ontario, Saskatchewan and Alberta) have already enacted specific enabling legislation applicable to X-rays, and two (Nova Scotia and Saskatchewan) have issued regulations requiring registration of operators and/or equipment. The Department's personnel-radiation-monitoring service is available to X-ray workers and its reports are available to the appropriate provincial departments of health.

As a supplement to its monitoring and inspection activities, the Department of National Health and Welfare provides short-term training courses in radiation protection for those persons assigned local responsibility for day-to-day operations.

Special attention is given to the health and safety problems associated with the siting, design, construction and operation of nuclear reactors and charged-particle accelerators. Committees of the Atomic Energy Control Board, including federal and provincial representatives, review these matters.

A comprehensive nation-wide monitoring program has been developed to assess the exposure of the public to radiation from radioactive fallout from nuclear-weapons testing. The Department is assisted in the systematic collection of samples of air, precipitation, soil, wheat, milk and human bone by the Departments of Transport and Agriculture and pathologists in hospitals throughout Canada. Monthly reports of the concentration of such fallout components as strontium-90 and cesium-137 in these samples are published. Because of a unique food-chain cycle in the Far North, a special study of cesium-137 in the North has been added to the nation-wide program. Direct measurements of cesium-137 levels in living persons are made with a high-sensitivity detection system known as a

"whole-body counter". This system is also used in the follow-up of radiation workers whose bodies may have been exposed to internal contamination from leaky radioactive sources or as a result of an accident.

The Department of National Health and Welfare and the Ontario Department of Health also conduct a joint environmental monitoring program around nuclear reactor sites to ensure that the operation of the reactor does not result in the gradual build-up of radioactive contamination to levels of significance to the health of the people in that community.

Subsection 7.—Health Research and International Health

Health Research.—Health research in Canada is carried on in universities, hospitals, research institutes and government departments. In the universities, relevant research is done by departments of basic medical sciences, medical and public health schools or faculties and by such departments as genetics and psychology as well as in special departments or institutes of research (see also Chapter VIII, Sect. 4, Subsect. 3). Hospitals used for teaching medical students also carry on considerable research, as do some of the larger non-teaching hospitals and mental institutes.

The Department of National Health and Welfare, the Medical Research Council, the Department of Veterans Affairs and the Defence Research Board support extensive programs of research. Other important research centres include the Connaught Medical Research Laboratories, the Banting Research Foundation, the Charles H. Best Institute, the Institute of Microbiology and Hygiene, the Allan Memorial Institute and the Montreal Neurological Institute. Some non-governmental or voluntary agencies concerned with health generally, or with specific diseases, encourage and support research by various means including financial assistance.

International Health.—Canada actively assists and co-operates with the World Health Organization and the other specialized agencies of the United Nations whose programs have a substantial health component or orientation. Capital and technical assistance are provided to underdeveloped countries through the Colombo Plan and other bilateral aid programs. Health training is provided for a number of persons coming to Canada each year under the different technical co-operation schemes (see p. 164 and pp. 171-174); during 1964, 64 trainees arrived, bringing the total number of trainees in Canada during the year to 212. These persons were working in a wide range of health disciplines under the External Aid Program.

Canadian experts in health legislation, health administration and related areas undertook specific assignments abroad during the year and specialists in a number of clinical fields were provided in response to requests from the developing countries. Capital assistance, primarily through the provision of cobalt beam therapy units for cancer treatment centres in the Colombo Plan area, was continued.

At the Sixteenth World Health Assembly in May 1962, Canada was elected to name a person to serve for a three-year term on the Executive Board of the World Health Organization and in 1963 this officer was appointed Chairman of the Board. Canada's term of office on the Executive Board of UNICEF commenced at the beginning of 1962 and similarly extends over a three-year period.

To carry out Canada's obligations under the International Sanitary Conventions, the Department of National Health and Welfare maintains quarantine measures for ships and aircraft entering Canadian ports and provides accommodation and necessary medical care for persons arriving in Canada who require quarantine (see p. 293).

The Department is responsible for the enforcement of requirements governing the handling and shipping of shellfish under the International Shellfish Agreement between Canada and the United States and, at the request of the International Joint Commission, participates in studies connected with control of pollution of boundary waters between Canada and the United States as well as with problems caused by atmospheric pollution.

Other international health responsibilities include the custody and distribution of biological, vitamin and hormone standards for the World Health Organization and certain duties in connection with the Single Convention on Narcotic Drugs, 1961, and Canada's representation on the Narcotic Commission of the United Nations.

Section 2.—Provincial and Local Health Services

Provincial and local health services may be grouped into several broad categories: general public health services, primarily of a preventive nature; services for specific diseases or disabilities combining prevention and treatment; services related to general medical and hospital care; and services for disabled and chronically ill persons.

Subsection 1.—General Public Health Services

Provincial and local governments co-operate closely in providing community public health services. The autonomy of the provinces and their social, economic and geographic diversity make for some variety in legislative provisions, in financial arrangements and in the detailed division of functions between provincial health departments and local and voluntary agencies. Each province, however, offers all or nearly all of a basic range of public health services, which includes environmental health, occupational health, communicable disease control, maternal and child health, dental health, nutrition, health education and public health laboratories.

Environmental Health.—The control of factors in the environment that are harmful to physical health is a rapidly expanding area of public health activity. Much of the work in community sanitation involves traditional inspection duties essential to the maintenance of pure milk, water and food supplies, disposal systems and provision of sanitary conditions in public areas. Increasing industrialization and urbanization, however, have both magnified the old problems and imposed new responsibilities. Air pollution, water pollution, radiation exposure and the use of pesticides are emerging as major environmental problems, necessitating the co-operative efforts of governments and other agencies in research and in planning effective control measures.

Occupational Health.—Services designed to prevent accidents and occupational diseases and to maintain the health of employees are the common concern of provincial health departments, labour departments, workmen's compensation boards and industry management. Provincial agencies regulate working conditions and offer consultant and educational services to industry. All provinces have legislation (Factory Acts, Shop Acts, Mines Acts, Workmen's Compensation Acts) setting health safety standards for employment.*

Communicable Disease Control.—There are separate divisions of epidemiology or communicable disease control in six provinces; in the other provinces these functions are handled by other provincial medical consultants. Local health authorities undertake case-finding and diagnostic services in co-operation with public health laboratories, carry out epidemiological investigations and often participate in tuberculosis and venereal disease control measures. All provincial health departments organize immunization programs for the public against diphtheria, tetanus, poliomyelitis, whooping cough and smallpox. Through agreement with the Federal Government, live oral poliovirus vaccine (Sabin) as well as Salk vaccine is made available by provincial health departments for immunization against poliomyelitis. Other agents such as gamma globulin may be provided under certain conditions for protection against measles and infectious hepatitis.

Maternal and Child Health.—Most provincial health departments have maternal and child health divisions under medical direction or have made other administrative arrangements to provide consultant services in this field. In addition, six of the provinces have consultant nursing services within these divisions. Provincial divisions provide advisory

*See Chapter XVIII, Section 1, Subsection 2, for provincial labour legislation.

services to local health departments and to hospitals, conduct studies of local problems and needs, and assist in the training of health personnel. Through local health departments conducting generalized public health programs, maternal and child health services are available to a high proportion of the population. The basic staff consists of a medical officer of health, public health nurses and sanitation inspectors. Programs and services for mothers and children may include prenatal education, home visiting, child health conferences and school health services. Other health personnel—dentists, nutritionists, health educators and social workers—share interests in the promotion of family health.

Dental Health.—All provincial health departments have dental health divisions that administer programs varying under local conditions but directed almost entirely to health education and the care of children. Training of dentists and dental hygienists in public health, the operation of children's preventive and treatment clinics, and health education are primary concerns in all provinces. Water fluoridation projects involving a total of 4,050,100 people are in operation in eight provinces and in the Northwest Territories. Four provinces—Alberta, Manitoba, Ontario and Nova Scotia—have set up, in conjunction with their dental schools, special courses for dental hygienists. In all ten provinces clinical care is provided for children in remote rural areas. A locally sponsored plan in which the cost of dental services for children is shared by the community and the provincial health department is in operation in more than 90 communities in British Columbia.

Nutrition.—Services include technical guidance, education, consultation and research. In some provinces, school lunch programs are sponsored and dietary supplements distributed. Five provinces have special nutrition divisions; in other provinces, consultants in nutrition function under a broader grouping of departmental services.

Health Education.—A basic concern of provincial health authorities is to stimulate public interest in important health needs, and in most provincial health departments a division of health education is established for this purpose, directed by a full-time professional 'health educator'. The division may also provide consultative services to the management of the department, to local health authorities and to voluntary associations.

Public Health Laboratories.—The public health laboratory was one of the earliest provincial services developed to assist local public health departments in the protection of community health and the control of infectious diseases. Public health bacteriology (testing of milk, water and food supplies), diagnostic bacteriology and pathology are the principal functions of the laboratory service, with medical testing for physicians and hospitals steadily increasing in volume. Efforts to co-ordinate public health and hospital laboratory services and measures to bring laboratory facilities to rural areas are among the recent developments.

Subsection 2.—Services for Specific Diseases or Disabilities

Mental Health.—Treatment programs for the mentally ill have centred mainly around three types of facilities: the mental hospital, the psychiatric unit in the general hospital and the organized community mental health clinic. These facilities, however, no longer have separate and distinct functions. New emphasis on the role of the community and its resources in the treatment and rehabilitation of the mentally ill is affecting the whole program of in-patient care. Utilizing the basic clinical facilities of general hospitals and mental hospitals, the community program is extending its scope and usefulness through the provision of day-care centres, sheltered workshops, half-way houses, and foster home and boarding home care. More than 60 general hospitals in Canada have organized psychiatric units, providing bed accommodation for more than 2,000 patients. Further planning in community-based services concerns the development of small regional psychiatric hospitals from which a comprehensive community program will emanate. Examples of this type are the new 150-bed hospital in Yorkton, Sask., a 68-bed psychiatric hospital in Selkirk, Man., and the developing community facilities for in-patient, out-patient and day care in Ottawa, Sudbury and Windsor, Ont.

Special centres for the assessment and diagnostic evaluation of mentally retarded children are also being developed. Day-training schools or classes for the trainable retarded, sponsored by some 250 local associations of parent groups forming the Canadian Association for Retarded Children, are now organized throughout the land.

Most public mental hospitals provide care and treatment for all types of mental illness. New programs of recreational and industrial therapy and enlarged and modernized clinical and surgical facilities are examples of widespread improvements in mental hospital care that particularly benefit patients undergoing active treatment. More recently, planning has been undertaken to reassess the status of the long-term chronically ill patient. Since 1961 new legislation governing the admission and care of the mentally ill has been enacted in four provinces—Saskatchewan, Alberta, British Columbia and Manitoba—designed to promote easier and more informal methods of admission and discharge and to establish machinery guaranteeing periodic review of the medical certification of long-term patients.

A great part of the cost of care in mental hospitals is borne by the provincial governments, although a charge, according to ability to contribute, may be made in some provinces. Newfoundland and Saskatchewan provide complete free care; Manitoba covers minimum maintenance costs for all patients; in Nova Scotia the provincial hospital gives free care to patients requiring active treatment; and in Ontario mental-institution treatment is included in the hospital care insurance plan.

Tuberculosis.—The fight against tuberculosis is one of the major programs of all health departments. Free hospitalization and free drug treatment, both on an in-patient and domiciliary basis, is provided. In two provinces extensive BCG programs are in effect and in the other provinces this prophylactic is provided to groups at special risk. Case-finding programs in the form of community tuberculin and X-ray surveys, surveys of high risk groups, and the follow-up of all arrested tuberculosis cases are routine. These activities have resulted in a decline in the Canadian tuberculosis death rate of 83 p.c. since 1951. In 1963 the rate was 3.6 per 100,000 population. The number of beds set up in public sanatoria declined from a peak of 18,977 in 1953 to fewer than 8,000 in 1964.

Cancer.—Health departments and lay and professional groups working for the control of cancer have been concerned mainly with four aspects of the problem—diagnosis, treatment, research and public education. In cancer detection and treatment, specialized medicine, hospital services and an expanding public health program are closely related. There are programs operating under health departments in four provinces; four others have provincially supported cancer agencies or commissions. These sponsor the work of diagnosis and treatment in special clinics, located usually within the larger general hospitals. Under the provincial hospital insurance plans, the benefits pertaining to in-patient care in the treatment of cancer are essentially similar in ten provinces and include such special services as diagnostic radiology, laboratory tests and radiotherapy. Similar services for out-patients are covered either by hospital insurance or by federal-provincial cancer control grants. Comprehensive free medical programs for cancer patients are in operation in Saskatchewan and Alberta and for cancer in-patients in New Brunswick.

Veneral Disease.—Free diagnostic and treatment services are available in all provinces but the operation of government clinics is being increasingly superseded by the method of supplying free drugs to private physicians who are reimbursed for treatment of indigents on a fee-for-service basis.

Alcoholism.—Ontario, Manitoba, Alberta and British Columbia carry out research and education programs and operate centres for treatment, supported largely by public funds. Ontario, Saskatchewan and Alberta also have rehabilitation programs for alcoholic inmates of reform institutions. Legislation in Newfoundland, New Brunswick, Nova Scotia and Quebec authorizes the setting up of similar agencies to initiate research and education studies in those provinces.

Other Diseases or Disabilities.—Services for persons with chronic disabilities, such as heart disease, arthritis, diabetes, visual and auditory impairments and paraplegia have been developed largely by voluntary agencies assisted by federal and provincial funds. (See also pp. 300-301.)

Subsection 3.—Public Medical Care

Saskatchewan and Alberta operate province-wide medical care insurance programs. About half the population of Newfoundland receives physicians' services at home or in hospital under the provincially administered Cottage Hospital Medical Care Plan which is financed in part on a premium basis. Medical indigents not under the Plan may also receive care at provincial expense. In addition, all Newfoundland children under the age of 16 years are entitled to free medical and surgical care in hospital.

For several years Nova Scotia, Ontario, Saskatchewan, Alberta, British Columbia and Manitoba have supported the cost of providing certain personal health care services for specified categories of persons in need and receiving public assistance. In British Columbia and Ontario the beneficiaries include recipients of needs- or means-tested old age security, old age assistance, blindness and disability allowances, mothers' allowances, certain child welfare cases and unemployed persons in need (unemployables only in British Columbia); dependants are also usually enrolled. Alberta covers similar categories of persons now qualifying under a provincial needs test. Nova Scotia covers mothers' allowance recipients and their dependants, and blindness allowance recipients. Saskatchewan covers recipients of supplemental allowance to either old age security pensions or blindness allowances, aid to dependent families and provincial short-term assistance; old age assistance recipients are enrolled by the province, for hospital care and medical care benefits only, through the provincial health insurance programs. Manitoba covers aged and infirm persons requiring custodial care, recipients of blind persons' allowances, recipients of mothers' allowances and their dependants, and child wards. In all provinces, indigent persons not covered by these programs may have necessary care financed by the municipalities in which they reside.

Under the Ontario program, the principal service covered is physicians' care in the home and office, including certain out-of-hospital minor surgical procedures and prenatal and postnatal care. Basic dental care is available to the children of mothers' allowance recipients. The programs in Nova Scotia, Saskatchewan, Alberta, British Columbia and Manitoba provide for complete medical care in the home, office and hospital. In addition, all commonly used prescription drugs are included in British Columbia, Manitoba and Saskatchewan (although these carry a 50-p.c. co-charge limitation to long-term assistance recipients in Saskatchewan for non-life-saving drugs where financial hardship is not demonstrated). Dental care and optical care are covered in the four westernmost provinces, sometimes only on special authorization and/or with dollar limits. Other services that may be provided in these provinces include diagnostic tests, appliances, physiotherapy, chiropody, chiropractic treatment, home nursing and transportation for medical reasons.

In Alberta, Saskatchewan, Manitoba and Nova Scotia, where provincial welfare recipients only are covered, health services for eligible persons are financed wholly from provincial general revenues. In British Columbia, costs are shared on a 90-10 basis, with the municipalities assuming their 10-p.c. share on a basis proportionate to population; in Ontario, per capita contributions toward the cost of medical services for unemployed on relief are shared on an 80-20 basis with the municipality of residence.

Since July 1962, every person who has resided in Saskatchewan for three months (and is not entitled to receive medical services under other public programs) and has paid, or has had paid on his behalf, the required premium, is entitled to have payment made on his behalf from the Medical Care Insurance Fund for medical, surgical and obstetrical care, without limit, in his home, in the doctor's office and in hospital, from his physician-of-choice (including payment at specialists' rates for referred specialists' services). There are no restrictions relating to age or pre-existing conditions. Physicians may elect to receive payment in a number of ways; usually they choose to receive direct

payment from the Medical Care Insurance Commission at 85 p.c. of the 1959 Schedule of Minimum Fees of the College of Physicians and Surgeons of Saskatchewan (as amended) as payment in full, or their patients enrol voluntarily with an approved health agency, which pays the physician an amount equal to the amount paid to the agency by the Commission in respect of the physician's assessed account. The Saskatchewan program is financed almost wholly from personal premiums plus general revenue contributions. In 1964, premiums accounted for 16 p.c. and general revenue contributions for 82 p.c. of the Commission's total receipts. There were more than 879,000 persons covered by the Saskatchewan Medical Care Insurance Act at the end of June 1964, or about 93 p.c. of the provincial population. Most of those not covered were protected under other public programs, both federal and provincial.

On Oct. 1, 1963, Alberta's medical care plan became effective. It is designed primarily to help residents with low incomes who voluntarily purchase medical care insurance from approved non-profit and commercial agencies. The approved carriers must make available to all residents, with no restrictions relating to age or pre-existing health conditions, a program of insurance that provides the attendance of physicians in home, office or hospital, as well as surgical, specialist and general diagnostic services. Maximum premium rates, set by the province, must not be exceeded. The plan is financed completely from personal premiums but there is provision for government subsidization of the premium costs of low-income persons. The subsidies are set up as flat rates but usually amount to 50 p.c. of the premium for persons with no taxable income and 25 p.c. for persons with taxable incomes of from \$1 to \$500. All residents may insure medical services either through the doctor-sponsored Medical Services (Alberta) Incorporated or through approved commercial agencies; doctors are re-imbursed at 90 p.c. of their assessed fees by the former and at 100 p.c. by the latter. In May 1965, some 831,000 persons were covered by the Alberta medical plan, 57 p.c. of the provincial population. Another 162,000 persons, 11 p.c. of the population, had coverage for comparable benefits under special programs.

The British Columbia legislature passed, in March 1965, a Medical Grant Act allowing the government to establish a medical insurance care plan similar to the one operating in Alberta, in that purchase of insurance is to be voluntary, maximum premiums will be set, and no person may be refused insurance because of age or health conditions. The government may share the premium costs of certain persons but, instead of setting out flat rates, it will pay one half of the premium of persons with no taxable income and one quarter of the premium of persons with taxable incomes of from \$1 to \$1,000. The plan is scheduled to take effect on Sept. 1, 1965.

The Ontario legislature passed, in June 1965, an Act to establish a plan of medical services insurance. Under the plan, maximum premiums will be set by the government and insurance will be available to all, with no exclusions because of age or pre-existing health conditions. The premium costs to certain individuals, to be specified in the regulations, will be totally subsidized by the government and the government will act as the insuring agency for those persons. Persons who are ill, disabled or unemployed and are unable to continue payment of their premiums may apply for assistance to maintain their medical services insurance. The plan is scheduled to take effect on June 1, 1966.

Subsection 4.—Services for the Disabled and Chronically Ill

The success of rehabilitation programs for injured workers, war veterans, handicapped children and other disability groups has encouraged more recent efforts to extend rehabilitation services to all handicapped persons. By 1964, physical medicine and rehabilitation departments were established in some 66 hospitals, including 13 children's hospitals, and in six veterans hospitals. Complementing these were 48 independent rehabilitation centres, including 27 children's centres and four workmen's compensation centres. Hospital services available to in-patients and out-patients include physical medicine, physiotherapy, occupational therapy and social services; most of the children's hospitals and the teaching hospitals also supply speech therapy. The rehabilitation centres provide com-

prehensive medical, psychosocial and vocational services to more severely disabled persons who require intensive or long-term therapy. In addition, the children's hospitals and centres operate special education classes. Community agencies such as those providing vocational rehabilitation services or home care co-operate in the rehabilitation of disabled children and adults.

Most large general hospitals conduct special out-patient clinics for disabilities such as arthritis and rheumatism, diabetes, glaucoma, speech and hearing defects, heart diseases, orthopedic and neurological conditions. Voluntary agencies, which are concerned with specific disability groups such as arthritics, the blind, the deaf, children suffering from cystic fibrosis, haemophilia or muscular dystrophy, the mentally ill or retarded, or disabled persons generally, are also broadening their rehabilitation services. These agencies provide such services as the supply of personal aids and appliances, employment and education, and sheltered workshops and also participate in the provision of services for the homebound. More than 100 sheltered workshops were in operation in 1964, serving persons with a wide range of handicapping conditions. Organized home care programs, under either hospital or community sponsorship, have been established in the principal cities, providing nursing, homemaker, physiotherapy and other services to the disabled, the chronically ill and the aged in their own homes. Several provincial health departments have instituted home nursing services to residents of outlying districts.

Provincial health departments and voluntary agencies are developing service programs for the treatment and rehabilitation of physically and mentally handicapped children. Most of them have established registries of handicapped children of varying coverage in co-operation with physicians, health units, hospitals and other agencies. Such registries, which are increasingly useful sources of morbidity statistics including congenital anomalies, assist in the planning and co-ordination of rehabilitation services. In addition to medical rehabilitation, programs for handicapped children usually include family counselling, recreation, transportation and foster home care; travelling clinics extend periodic diagnostic and treatment services to outlying areas. Special schools for various groups of handicapped children are established by local school boards in the main cities but most of the nine residential schools for the deaf and the six for the blind are operated by the provincial education departments.

The establishment of three regional prosthetic research and training units in rehabilitation centres in Montreal, Toronto and Winnipeg, supported by National Health Grants amounting to \$200,000 a year, is a significant development. These centres and several juvenile amputee clinics in other cities are rehabilitating children with limb deformities or amputations. A federal-provincial program assists in the extraordinary rehabilitation, maintenance and counselling costs on behalf of children with thalidomide-induced defects.

The Federal Government, through its National Health Grants (see p. 287), assists the provinces in their rehabilitation programs. These grants are used to develop medical rehabilitation services and facilities, to support the training of medical rehabilitation personnel (through grants to university schools and student bursaries), to provide equipment and to finance research.

Section 3. —Hospital and Other Health Statistics

Statistical information on the health of Canadians is at present limited to the well established and highly standardized mortality, communicable disease and institutional statistics series, all of which have been available for a long period, and the recently established series covering operations under the federal-provincial hospital insurance program (pp. 288-291). Much statistical information is also available from provincial and other health sources.

Statistics on causes of death are given in the Chapter on Vital Statistics, pp. 262-265; those on hospital statistics in Subsection 1 following; and those on notifiable diseases in Subsection 2.

Subsection 1.—Hospital Statistics*

Hospitals in Canada are classified in two ways for statistical purposes—first by ownership, i.e., public, private or federal, and second by type, i.e., general, allied special (including chronic, convalescent, rehabilitation, maternity, communicable diseases and orthopedic hospitals), mental and tuberculosis. In addition, general hospitals are grouped by size in accordance with their rated bed capacity.

In 1964 there were 1,349 hospitals operating in Canada, having a combined rated bed capacity (excluding bassinets) of 204,592 or the equivalent of 10.6 per 1,000 population. General hospitals accounted for 107,703 beds, allied special hospitals for 21,218, mental hospitals for 67,411 and tuberculosis sanatoria for 8,260. Among the provinces, the ratio of general hospital beds per 1,000 population ranged from 4.7 in Quebec to 7.2 in Saskatchewan.

* Prepared in the Institutions Section of the Health and Welfare Division, Dominion Bureau of Statistics. Detailed information will be found in the following DBS publications: *Hospital Statistics, Vols. I to VII* (Catalogue Nos. 83-210 to 83-216); *Mental Health Statistics, Vol. III* (Catalogue No. 83-205); *Tuberculosis Statistics, Vol. II* (Catalogue No. 83-207); and *List of Canadian Hospitals and Related Institutions and Facilities* (Catalogue No. 83-201).

¹ Based on estimated population as at June 1, 1964.² Mental hospitals only; exclusive of psychiatric units in other hospitals.³ Tuberculosis hospitals only; exclusive of tuberculosis units in other hospitals.

Information concerning the number of hospitals operating and their bed capacities (Table 5) was available for 1964 at the time of preparation of this Subsection but the most recent figures available for Tables 6 to 16 were for 1963.

Aggregate estimated admissions of adults and children to all types of hospitals in 1963 numbered 3,090,048 or 164 per 1,000 population compared with 161 in 1962, and admissions to public general hospitals represented 89.7 p.c. of the total. On any particular day in 1963, there were 177,300 persons (adults and children) in Canadian hospitals compared with 172,900 in 1962. The occupancy rate in public general hospitals, at 81.4 p.c., was down slightly from the previous year and that in tuberculosis sanatoria continued its downward trend to 67.0 p.c. from 70.0 p.c. in 1962. The rate in mental hospitals, however, increased from 105.8 p.c. to 108.4 p.c. in the same comparison.

6.—Movement of Patients¹ and Patient-Days in Operating Public, Private and Federal Hospitals, 1959-63

¹ Adults and children.² Population estimates as at June 1.³ Based on rated bed capacity.⁴ Mental hospitals only; does not include psychiatric units in other hospitals.⁵ Tuberculosis hospitals only;

does not include tuberculosis units in other hospitals.

Average length of stay of adults and children in public general hospitals in 1963 was 10.2 days, the same as in 1962, and increased gradually from 6.9 days in hospitals with fewer than 10 beds to 14.2 days in those with 1,000 or more beds. Average stay in larger hospitals tends to be longer because of the availability there of specialized and referral services.

Paid hours of work per patient-day in public general hospitals averaged 13.2 in 1963 compared with 12.9 in 1962, and ranged from 8.9 hours in 10-24 bed hospitals to 15.6 hours in 1,000 or more bed hospitals. The number of persons employed full-time in all Canadian hospitals in 1963 was estimated to be 248,400. In general hospitals there were 184 full-time personnel for every 100 rated beds; among the provinces, the ratio was highest in Quebec at 209 and lowest in Prince Edward Island at 132.

8.—Paid Hours of Work per Patient-Day (Adults and Children), by Type of Hospital and by Province, 1963

NOTE.—These figures relate to accumulated paid hours for all persons for whom salaries are recorded and include worked time as well as paid vacation time, holidays and sick leave.

¹ Mental hospitals only; exclusive of psychiatric units in other hospitals.

² Tuberculosis hospitals only; exclusive of tuberculosis units in other hospitals.

In 1963, as part of the tuberculosis screening program, public general hospitals carried out, on the average, 32 routine chest X-rays per 100 persons admitted. The ratio of operating-room operations on in-patients was 44 per 100 admissions.

10.—Radiological Examinations and Operations Carried Out in Public General Hospitals, 1963

Revenues of public hospitals in 1963 were estimated at \$1,036,000,000 and expenditures at \$1,078,000,000. Most of the revenue of general hospitals (88.2 p.c.) was derived from in-patient earnings and the bulk of the expenditures was for salaries and wages (63.6 p.c.). Cost per patient-day was \$28.58 compared with \$26.36 in 1962. Hospitals of 1,000 or more beds recorded the highest cost per patient-day at \$35.34 and the ratio tended to diminish as hospital size decreased, falling to \$20.44 in the 10-21 bed size.

Subsection 2.—Notifiable Diseases and Other Health Statistics*

In terms of number of new cases, the major infectious diseases reportable on a national basis were, in 1963, the venereal diseases combined (22,199 cases), infectious and serum hepatitis (10,077 cases), and scarlet fever and streptococcal sore throat (9,920 cases). Despite its relatively high level, the incidence of scarlet fever and streptococcal sore throat was 57.6 p.c. below the peak reached in 1959; the rate of infection was 52.5 cases per 100,000 population, which compared favourably with the corresponding 1959 rate of 134.2. In proportion to population, the province most severely affected in 1963 was Prince Edward Island, where the rate was more than 42 times that for the country as a whole.

Year-to-year increases, which exceeded the rate of growth in the population at risk, occurred between 1959 and 1963 in the incidence of the venereal diseases, the rate of new infections rising from 97.3 to 117.5 per 100,000 population. As in 1961 and 1962, British Columbia contributed the largest number of cases, although the case-rate for that province (320.6 per 100,000 persons) was lower than those for the Yukon Territory and the Northwest Territories. Among the reportable types of venereal disease, gonorrhoea accounted for 87.4 p.c. of total cases nationally, and for 75.6 p.c. of the British Columbia cases.

The rate of viral hepatitis infections increased from 27.1 cases per 100,000 population in 1959 to 67.5 in 1961 and 1962 and then dropped to 53.3 in 1963.

In recent years the most significant decline in the incidence of a notifiable disease has been the falling off in reported cases of paralytic poliomyelitis. Contributing to the decrease have been the development of vaccines and mass inoculation and feeding programs undertaken by public health authorities. Only 123 new cases were reported during 1963; this was slightly higher than the 89 cases reported in 1962 but was still lower than for any other year since 1949, the first year statistics on this disease were compiled nationally.

* Prepared in the Public Health Section, Health and Welfare Division, Dominion Bureau of Statistics.

Subsection 3.—Numbers and Earnings of Privately Practising Physicians

Numbers.—According to a survey conducted by the Department of National Health and Welfare, there were 21,011 active civilian physicians in Canada in 1962; the 1962 ratio of 881 persons per physician continues the postwar trend of improvement in over-all physician supply. Table 17 shows the historical trend since 1901 and the provincial distribution for 1962. The ratio of 748 persons per physician for British Columbia in the latest year is the most favourable level of physician supply yet achieved by a Canadian province.

17.—Active Civilian Physicians and Population per Physician, 1901-62, and by Province, 1962

¹ Includes 63 not allocated by province.

Table 18 shows that the physicians of Canada are more highly concentrated in the larger centres of population than is the population generally, and that this concentration has been increasing for both the total population and physicians. In addition, the percentage increase of the 1962 total of physicians in centres of fewer than 10,000 population over that for 1951 was less (5.8) than the percentage increase over 1951 of the 1959 total in these areas (11.9), indicating a decrease in the total number of physicians in these areas during the 1959-62 period. Although the trends indicated in these data are slightly exaggerated by changes between censuses in the make-up of census metropolitan areas, it is clear that there is an over-all widening of the traditional disparity in availability of physician services between smaller localities and large urban centres.

18.—Percentages of Population and of Active Civilian Physicians in Centres of Over or Under 10,000 Population and Percentage Increases over 1951

Item	Percentages of Total			Percentage Increases Over 1951

⁴ Size of place as in 1961 Census.

Table 19 indicates little real change in recent years in the proportion of active civilian physicians who are engaged primarily in private practice, but an increased emphasis on specialization is indicated within both the private practice and "Other Work" groups. The increase between 1959 and 1962 in the proportion of physicians who were "interns, residents, fellows" is in line with the trend toward increased specialization and the longer training period involved.

19.—Percentage Distribution of Active Civilian Physicians by Nature of Major Work in which Engaged, 1954, 1959 and 1962

Nature of Major Work	1954 ¹	1959 (estimate)	1962 (estimate)
	p.c.	p.c.	p.c.
General private practice ²	43.2	39.3	37.7
Specialist private practice ²	29.1	34.7	35.7
Totals, Private Practice ²	72.3	74.0	73.4

Other Work—			
Non-specialist.....	8.5	5.7	4.7
Specialist.....	10.8	12.0	12.9
Grand Totals	100.0	100.0	100.0

¹ Data prior to 1959 did not take into account certifications by the College of Physicians and Surgeons of the Province of Quebec. Although designation as a "specialist" did not depend on the holding of formal specialist qualifications, specialization was nevertheless slightly understated in the data prior to 1959, most particularly in Quebec.

² Includes group practice and partnerships.

Earnings.—More than 95 p.c. of the earnings of privately practising physicians and surgeons in Canada were obtained from fees charged for individual items of professional service. As Table 20 shows, average gross earnings in 1963 from fees plus wages and salaries earned incidental to fee practice were \$28,367. This figure was 9 p.c. higher than in 1962 and 39 p.c. above the 1957 figure. The highest average gross earnings in 1963 were reported in Saskatchewan at \$34,031; in Alberta at \$30,902 and Ontario at \$30,442 they were substantially above the national average. Average gross incomes in the remaining provinces were below the national average and ranged downward from \$27,500 in British Columbia to \$21,034 in Newfoundland. Generally, throughout the seven-year period 1957-63, highest average gross earnings have been most consistently reported in Ontario and the westernmost provinces, with Alberta usually having the highest average of all.

The net returns to doctors, after deduction of the expenses of professional fee practice, reveal similar geographic patterns, as seen in Table 20. Net earnings for Canada as a whole averaged \$18,799 in 1963, 8.8 p.c. higher than in 1962 and about 49 p.c. above the 1957 figure. The highest provincial average net income was reported by Saskatchewan doctors at \$21,436 followed by Ontario doctors at \$21,227. The lowest average net income was reported in Newfoundland.

PART II.—PUBLIC WELFARE AND SOCIAL SECURITY

Responsibility for social welfare is shared by all levels of government. Comprehensive income-maintenance measures such as the Canada Pension Plan, old age security pensions, family allowances, youth allowances, and programs such as unemployment insurance and the National Employment Service where nation-wide co-ordination is required, are administered federally. Substantial federal aid is given to the provinces in meeting the costs of public assistance. The Federal Government also provides services for special groups such as veterans, Indians, Eskimos and immigrants.

The Department of National Health and Welfare is generally responsible for federal welfare matters: the Departments of Veterans Affairs, Citizenship and Immigration (Eskimos) and Northern Affairs and National Resources (Indians) also operate programs for specific groups. The Unemployment Insurance Commission is responsible for the operation of unemployment insurance and the National Employment Service is administered by the Department of Labour. Information on these items is given in other chapters of this publication (see Index).

Administration of welfare services is primarily the responsibility of the provinces but the provision of services is often assumed by local authorities, generally with financial aid from the province.

Co-ordination in welfare matters between different levels of government and between government and voluntary authorities will be facilitated by the newly established National Council of Welfare, an advisory body to the Minister of National Health and Welfare. The Council consists of the federal Deputy Minister of Welfare who acts as chairman, the provincial deputy ministers of welfare, and ten other persons appointed for three-year terms by the Governor in Council. The National Council of Welfare held its first meeting in Ottawa during April 1965.

Section 1.—Federal Government Programs

Subsection 1.—Canada Pension Plan

Canada Pension Plan legislation, enacted in 1965, provides an important new component in Canada's social security system. The Plan is designed to provide, for most members of the labour force, a social insurance system whereby each contributor builds up a right to a graduated retirement pension, the amount of which is related to his previous earnings pattern. The Plan also provides benefits to the disabled contributor and his dependent children and, at the contributor's death, a death benefit and benefits for his widow and orphaned children.

Retirement pensions under the Canada Pension Plan will come into effect according to the following staging. In 1967 contributors age 68 or over will be able to claim retirement pensions; contributors age 67 or over can do so in 1968, contributors age 66 or over in 1969, and contributors age 65 or over in 1970 and after.

Until the Plan is 10 years old the rates of retirement pension will be built up steadily. In 1967, after one year of contributions, the retirement pension will be 2.5 p.c. of a contributor's pensionable earnings. For anyone contributing for two years and retiring at age 67 or over in 1968, the pension will be 5 p.c. of his earnings, and so on, until the full benefit of 25 p.c. of pensionable earnings is first reached after 10 years of contributions.

Pensions for widows and disabled widowers, orphans' benefits and the death benefit will first be payable early in 1968. Pensions for disabled contributors and for their dependent children will first be payable in the spring of 1970.

Coverage under the Canada Pension Plan and the comparable Quebec scheme will be comprehensive. For administrative and constitutional reasons, there will be certain exemptions from coverage. Employees who earn \$600 or less in a year and self-employed persons who earn less than \$800 in a year will not pay contributions for that year.

The Canada Pension Plan will be financed by contributions based on earnings. The first \$600 of each person's annual earnings will be exempt from contributions. On earnings above that amount and below the ceiling, initially \$5,000 a year, the employee will make a contribution of 1.8 p.c. Employers will make a matching contribution. Self-employed people will pay the combined rate of 3.6 p.c. on annual earnings between \$600 and \$5,000 provided their total annual earnings are \$800 or more.

The contributory limits under the Canada Pension Plan will be adjusted with changing economic conditions. For the first two years of the plan the upper and lower limits are \$5,000 and \$600. For the next eight years these limits will be adjusted by means of a specially constructed pension index which reflects changes in the consumer price index. After the tenth year, the contributory limits will be adjusted according to changes in the earnings index which will be based on a long-term moving average of national wages and salaries. For purposes of calculating a contributor's pension, his earnings record for each

year will be adjusted at the time the benefit begins so that it bears the same relation to the contributory earnings upper limit in force at that time that his actual earnings bore to the upper limit prevailing in the year in which they were made.

In the calculation of a retirement pension, the contributor's earnings are averaged over the period from his age 18, or January 1966 if that is later, to his age 65 or until he claims a pension, if that is later. For each year beyond age 65 that a man continues to work and make contributions he will be able to exclude, after 1975, an additional low year. In order not to unduly penalize people whose earnings in some years are abnormally low through sickness or unemployment, the Plan allows them to exclude, in calculating their average earnings, periods equal to 15 p.c. of their remaining contributory periods.

The earnings-related retirement pension is designed for contributors who have retired from regular employment. Those continuing to work or taking up new employment after claiming a Canada retirement pension will have to pass a retirement test; the test will be effective from age 65 until age 70, at which time the retirement pension will become payable unconditionally. The retirement test is such that when earnings exceed \$900 a year, but not \$1,500, the pension for that year will be reduced by one half the excess. When earnings exceed \$1,500 a year, pension will be reduced by \$300 plus earnings in excess of \$1,500. No adjustment will be made to a pension for any month in which the pensioner's earnings do not exceed \$75 no matter what his earnings in any other month may be. Retirement test limits will be adjusted in future in the light of changing economic conditions.

A contributor who becomes disabled after making the required number of contributions will be entitled to a disability pension consisting of a flat rate component, initially \$25 monthly, and an earnings-related component amounting to 75 p.c. of the retirement pension otherwise payable to him. In calculating this pension, earnings are averaged over the period from age 18 or January 1966 until the date the disability pension becomes payable, the minimum period being 60 months. In addition, benefits will be payable for dependent children of a disability pensioner, that is, children under age 18 and children up to age 25 if in full-time attendance at school. The rate is \$25 for each of the first four eligible children and \$12.50 for each additional child.

A widow age 45 or over at the contributor's death, a disabled widow of any age and a widow of any age with dependent children will be entitled to a widow's pension consisting of a flat rate component, initially \$25 a month, and an earnings-related component equal to 37.5 p.c. of the retirement pension payable to her deceased husband. A widow who is not disabled and who is not caring for dependent children will have her pension reduced if she is under age 45 at the death of her husband; if she is under age 35, no pension is payable until she is 65. Since these widows' pensions include a flat rate component, a minimum number of contributions by the deceased contributor are required.

Benefits payable for orphans are equal in amount to the benefits provided to dependent children of a disability pensioner.

Women widowed of age 65 or over and widows reaching age 65 will receive pensions of 60 p.c. of their husbands' retirement pensions. Many widows of age 65 or over will also be entitled to retirement pensions of their own. At age 65 there are provided two alternative formulae for the re-calculation of the widow's pension, thereby providing retirement income that would best reflect the widow's particular circumstances.

A pension is also provided for the disabled widower if he was disabled at the time of his wife's death and was wholly or substantially maintained by her. The pension for a disabled widower under 65 years of age is \$25 plus 37.5 p.c. of his wife's retirement pension. For a disabled widower reaching age 65 or for a person becoming a disabled widower

after age 65, the rate of pension is 60 p.c. of his wife's retirement pension. Disabled widowers entitled to their own retirement pensions are provided with two alternative formulae for purposes of calculating their total retirement income. The disabled widower must continue to prove disability for the duration of his pension.

A lump sum death benefit is payable subject to the same qualifying conditions as pertain to other survivors' pensions. The amount of the benefit is six times the monthly retirement benefit that is being (or would be) paid to the contributor in the month of his death, but cannot exceed 10 p.c. of the contributory ceiling for that year.

Canada Pension Plan benefits, once they have commenced to be paid, will be adjusted in accordance with changes in the pension index.

The Department of National Health and Welfare will administer the Canada Pension Plan. Contributions will be collected by the Department of National Revenue. Employers will be responsible for deductions from their employees' earnings and for remitting these, along with their own contributions, to the Department of National Revenue. Self-employed persons will make payments directly at the time such people normally pay their income tax. The administration of the federal legislation will be co-ordinated with provincial legislation of a comparable nature. Social insurance numbers, which have already been issued to over 6,000,000 people, will be extended to all contributors under the Canada Pension Plan.

Appeals in connection with coverage and contributions may be made to the Minister of National Revenue. If a contributor is not satisfied, he may appeal further to the Pension Appeals Board whose decision is final except when any question of fact or law involves the operation of the Act in a province providing its own comprehensive pension plan. In this case a further appeal may be made to the Supreme Court of Canada. With regard to benefits, there is a three-stage appeal procedure: first to the Minister of National Health and Welfare; second, if the applicant is not satisfied with the Minister's decision, to a Review Committee; and third, to the Pension Appeals Board whose decision is final and binding.

The legislation provides authority for reciprocal agreements with other countries where there is a common interest in the portability of pensions and where a mutually satisfactory agreement can be attained.

Subsection 2.—Old Age Security

Under the Old Age Security Act of 1951, as amended, a universal pension of \$75 a month is payable by the Federal Government to all persons who meet the residence and age qualifications. The pension is payable in 1965 to those aged 70 or over but will be payable in 1966 to persons aged 69 or over, in 1967 to those aged 68 or over, and so on until by 1970 it will be payable to everyone aged 65 or more. In 1968 and succeeding years, the amount of the old age security pension will be increased in line with changes in the pension index developed for the Canada Pension Plan (see p. 317).

The old age security pension is payable to a person of attained age who has resided in Canada for ten years immediately preceding his application for the pension. Any gaps in the ten-year period may be offset if the applicant had resided in Canada in earlier years for periods of time equal in total to double the length of the gaps; in this case, however, the applicant must also have resided in Canada for one year immediately before his application for pension. A recent amendment authorizes the payment of the old age security pension to persons of attained age who have had 40 years of residence in Canada since age 18, thus making eligible for the pension those who have left Canada before reaching the qualifying age but who have spent virtually all of their working lives in

Canada. A pensioner may absent himself from Canada and continue to receive pension payments. If he has lived in Canada for 25 years since his 21st birthday, payment outside of Canada may continue indefinitely; if he has not so resided, payment is continued for six months, in addition to the month of departure, and is then suspended, to be resumed only with the month in which he returns to Canada.

The program is administered by the Department of National Health and Welfare through regional offices located in each provincial capital to which application is made for pension. It is financed on the pay-as-you-go method through a 3-p.c. sales tax, a 3-p.c. tax on corporation income and, subject to a limit of \$120 a year, a 4-p.c. tax on taxable personal income.

Subsection 3.—Family Allowances

The Family Allowances Act of 1944 is designed to assist in providing equal opportunity for all Canadian children. The allowances do not involve a means test and are paid from the federal Consolidated Revenue Fund. They do not constitute taxable income but there is a smaller income tax exemption for children eligible for allowances.

Allowances are payable in respect of every child under the age of 16 years who was born in Canada, or who has been a resident of the country for one year, or whose father or mother was domiciled in Canada for three years immediately prior to the birth of the child. Payment is made by cheque each month, normally to the mother, although any person who substantially maintains the child may be paid the allowance on his behalf. Allowances are paid at the monthly rate of \$6 for each child under 10 years of age and \$8 for each child age 10 or over but under 16 years. If the allowances are not spent for the purposes outlined in the Act, payment may be discontinued or made to some other person or agency on behalf of the child. Allowances are not payable for any child who fails to comply with provincial school regulations or on behalf of a girl who is married and under 16 years of age.

The program is administered by the Department of National Health and Welfare through regional offices located in each provincial capital. A Regional Director for the Yukon and Northwest Territories is located at Edmonton.

The Federal Government pays family assistance, at the rates applicable for family allowances, for each child under 16 years of age resident in Canada and supported by an immigrant who has landed for permanent residence in Canada, or by a Canadian returned to Canada to reside permanently. The assistance, which is payable monthly and for a maximum period of one year, is not payable for a child eligible for family allowances.

¹ Based on gross payment for March.

Subsection 4.—Youth Allowances

Legislation providing for a program of youth allowances was assented to on July 16, 1964 and became effective September 1964. The Federal Government does not provide youth allowances in Quebec which has its own program, but compensates that province by an amount equal to that which the Federal Government would otherwise have paid in allowances to Quebec residents.

Under the federal program, monthly allowances of \$10 are payable in respect of all dependent youths age 16 and 17 who are receiving full-time educational training or are precluded from doing so by reason of physical or mental infirmity. Both the parent or guardian and the youth must normally be physically present and living in a province other than Quebec. The allowance is not payable to a parent who does not reside in one of the nine provinces, even though his child may be attending school in Canada. A dependent youth may attend school in Quebec or outside Canada, or, if disabled, receive care or training in Quebec or outside Canada and still be considered eligible on the basis that he is a resident of one of the nine provinces but temporarily absent.

Allowances normally commence with the month following that in which family allowances cease and continue until the school year terminates. They are paid retroactively for the summer months on the commencement of the new school year. Allow-

ances for a disabled child not attending school, however, are payable continuously throughout the year. Should the youth leave school, leave the country permanently, cease to be maintained, take up residence in Quebec or die, the allowance will cease. Otherwise, the youth allowance continues until the end of the month in which the youth reaches age 18. Youth allowances are considered not to be income for any purpose of the Income Tax Act.

The program is administered by the Department of National Health and Welfare. The National Director of the family allowances and old age security programs also administers youth allowances, assisted by regional directors located in each of the provincial capitals.

The costs of youth allowances are met from the Consolidated Revenue Fund. For the seven months ended Mar. 31, 1965, the cost of youth allowances was estimated to be \$27,000,000. For the first full year of the program, that is the fiscal year ending Mar. 31, 1966, it is estimated that the cost will amount to \$48,000,000; additional funds will, of course, be expended in the form of compensation to the Province of Quebec. At the end of March 1965, youth allowances were being paid in respect of 398,037 children, excluding Quebec.

Section 2.—Federal-Provincial Programs

Subsection 1.—Canada Assistance Plan

Proposals for a Canada Assistance Plan that would complement the provisions of the Canada Pension Plan were announced in the Throne Speech on Apr. 5, 1965 and were discussed at a Federal-Provincial Conference of Ministers of Welfare on Apr. 8 and 9. Under the Plan, the Federal Government would be prepared to contribute, through comprehensive assistance programs adopted by the provinces, to the cost of assisting persons in need. Rates of assistance would be set by the provinces or their municipalities.

The plan would provide for extension of federal sharing to the costs of assisting needy mothers and of providing health care services to assistance recipients. Federal sharing would also cover expenditures for public assistance administration and for improving and extending welfare services for assistance recipients in order to encourage the development of services that would enable assistance recipients to achieve the greatest possible degree of self support.

Subsection 2.—Old Age Assistance

The Old Age Assistance Act of 1951, as amended, provides for federal reimbursement to the provinces for assistance to persons age 65 or over who are in need and who have resided in Canada for at least ten years or who, if absent from Canada during this period, have been present in Canada prior to the commencement of the ten-year period for double any period of absence. On reaching the eligible age a recipient is transferred to old age security. The federal contribution may not exceed 50 p.c. of \$75 a month or of the assistance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of assistance payable, the maximum income allowed and other conditions of eligibility.

For an unmarried person, total income allowed, including assistance, may not exceed \$1,260 a year. For a married couple it may not exceed \$2,220 a year or, when the spouse is blind within the meaning of the Blind Persons Act, \$2,580 a year. Assistance is not paid to a person receiving an old age security pension or an allowance under the Blind Persons Act, the Disabled Persons Act, or the War Veterans Allowance Act.

Recipients of old age assistance who are in need may receive supplementary aid under general assistance programs in the provinces. In certain circumstances, the Federal Government may share in such aid under the Unemployment Assistance Act (see p. 325).

	1961	100,184	50.56	20.57	30,657,396

¹ Maximum assistance sharable by the Federal Government was increased from \$55 to \$65 a month as of February 1962 and to \$75 as of December 1963.

Subsection 3.—Allowances for Blind Persons

The Blind Persons Act of 1951, as amended, provides for federal reimbursement to the provinces for allowances to blind persons age 18 or over who are in need and who have resided in Canada for at least ten years. The federal contribution may not exceed 75 p.c. of \$75 a month or of the allowance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of allowance payable and the maximum income allowed.

To qualify for an allowance a person must meet the required definition of blindness and have resided in Canada for ten years immediately preceding commencement of allowance or, if absent from Canada during this period, must have been present in Canada prior to its commencement for a period equal to double any period of absence. For an unmarried person, total income including the allowance may not exceed \$1,500 a year; for a person with no spouse but with one or more dependent children, \$1,980; for a married couple, \$2,580. When the spouse is also blind, income of the couple may not exceed \$2,700. Allowances are not payable to a person receiving assistance under the Old Age Assistance Act, an allowance under the Disabled Persons Act or the War Veterans Allowance Act, a pension under the Old Age Security Act or a pension for blindness under the Pensions Act.

Recipients of blindness allowances who are in need may receive supplementary aid under general assistance programs in the provinces. In certain circumstances, the Federal Government may share in such aid under the Unemployment Assistance Act (see p. 325).

¹ Maximum allowance sharable by the Federal Government was increased from \$55 to \$65 a month as of February 1962 and to \$75 as of December 1963.

Subsection 4.—Allowances for Disabled Persons

The Disabled Persons Act of 1954, as amended, provides for federal reimbursement to the provinces for allowances paid to permanently and totally disabled persons age 18 or over who are in need and who have resided in Canada for at least ten years immediately preceding commencement of allowance or, if absent from Canada during this period, have been present in Canada prior to its commencement for a period equal to double any period of absence. To qualify for an allowance a person must meet the definition of permanent and total disability set out in the Regulations to the Act which requires that a person must be suffering from a major physiological, anatomical or psychological impairment, verified by objective medical findings; the impairment must be one that is likely to continue indefinitely without substantial improvement and that will severely limit activities of normal living. The federal contribution may not exceed 50 p.c. of \$75 a month or of the allowance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of allowance payable, the maximum income allowed and other conditions of eligibility.

For an unmarried person, total income including the allowance may not exceed \$1,260 a year. For a married couple the limit is \$2,220 a year except that if the spouse is blind within the meaning of the Blind Persons Act, income of the couple may not exceed \$2,580 a year. Allowances are not paid to persons receiving allowances under the Blind Persons Act or the War Veterans Allowance Act, assistance under the Old Age Assistance Act, pensions under the Old Age Security Act, or mothers' allowances.

The allowance is not payable to a patient in a mental institution or a tuberculosis sanatorium. A recipient who is resident in a nursing home, an infirmary, a home for the aged, an institution for the care of incurables, or a private, charitable or public institution is eligible for the allowance only if the major part of the cost of his accommodation is being paid by himself or another individual.

Recipients of disability allowances who are in need may receive supplementary aid under general assistance programs in the province. In certain circumstances the Federal Government may share in such aid under the Unemployment Assistance Act (see below).

5.—Statistics of Allowances for Disabled Persons, by Province, Year Ended Mar. 31, 1965 with Totals for 1961-65

¹ Maximum allowance sharable by the Federal Government was increased from \$55 to \$65 a month as of February 1962 and to \$75 as of December 1963.

Subsection 5.—Unemployment Assistance

Under the Unemployment Assistance Act 1956, as amended, the Federal Government may enter an agreement with any province to reimburse it for 50 p.c. of the unemployment assistance expenditures made by the province and its municipalities to persons and their dependants who are unemployed and in need. All provinces and the two territories have signed agreements under the Act. The rates and conditions of assistance are determined by the provinces and, in some cases, by their municipalities. Payments to both employable and unemployable persons are sharable under the agreements, as are the costs of maintaining persons in homes for special care, such as nursing homes or homes for the aged. The Federal Government shares in additional assistance paid to needy persons in receipt of old age security pensions, old age assistance, blind persons' allowances, disabled persons' allowances and unemployment insurance benefits, where the amount of the assistance paid is determined through an assessment both of the recipient's basic requirements and of his financial resources.

¹ Includes dependants.

² Payment figures shown are for the months to which the claims made under the program relate and include amounts paid to the provinces by the Federal Government after the end of the fiscal year.

Subsection 6.—Fitness and Amateur Sport Program

The fitness and amateur sport program began in December 1961 when the Fitness and Amateur Sport Act, administered by the Minister of National Health and Welfare, came into effect, providing up to \$5,000,000 a year to be spent on the encouragement, promotion and development of active leisure pursuits for everyone in Canada. Although the federal, provincial and municipal governments provide the funds and resources, the programs are carried out almost entirely by non-governmental agencies. Under the Act, Canadian participation in active recreation and amateur sport can be promoted internationally, nationally, provincially and locally through financial assistance, technical guidance, the provision of teaching materials, assistance to training, research and the construction of facilities.

The National Advisory Council of Fitness and Amateur Sport advises the Minister of National Health and Welfare in fitness and amateur sport matters. Its 30 members are chosen for their interest and experience, with at least one member from each province. The Council studies and evaluates progress, recommends acceptance or rejection of applications for grants, and keeps in touch with national organizations with like interests.

The federal program has five elements. *Grants to National Organizations*, totalling more than \$1,000,000 a year, go to some 50 national fitness and sporting organizations to help train coaches, to improve standards of instruction, to increase participation in sports, to aid the holding of national and regional competitions, and to assist Canadian athletic teams at international competitions. *Grants for Athletic Events* of nation-wide interest assist in the holding of such events as the 1967 Pan-American Games in Winnipeg and the 1967 Canadian Winter Games in the Quebec area. *Grants for Training and Research* are made for graduate study in fitness and amateur sport, for research fellowships, and for scholarships and bursaries for undergraduate study in physical education and recreation. Grants are also made for research into matters related to fitness, and fitness research units have been established in some universities. The Canadian Documentation Centre on Fitness and Sport, located at the University of Ottawa, was established with the aid of funds from the program to provide a library and reference service. *Services of the Department of National Health and Welfare* include the provision of technical advice, training material and promotional aids. Visual aids for coaching, printed guides on particular sports and recreational activities, and technical information on the construction and use of facilities are being provided. "How To" kits, which include an illustrated

manual, a film to rouse interest in the subject and films in which techniques are demonstrated, as well as other films on sports and recreational activities, are available on loan from the Department's Fitness Film Library. Committees of the National Advisory Council meet frequently with the executives of sports organizations to discuss policy. A federal-provincial committee of government officials under the chairmanship of the Deputy Minister of Welfare advises on and co-ordinates governmental aspects of the program. The Department also co-ordinates work done by other federal agencies in fitness and amateur sport. Consultants of the Department collaborate with sports agencies and, on request, provide advice on the planning of activities and the use of funds. Grants to the Provinces of \$1,000,000 a year are made to those that enter into three-year cost-sharing agreements for provincial programs of fitness and amateur sports. The Federal Government meets 60 p.c. of the cost of projects and the full cost of the scholarships and bursaries. Applications for all grants at the provincial or local level are made in the first instance to the responsible provincial department.

The bulk of recreational activity occurs in the individual community and municipal recreation departments co-ordinate community effort, provide continuity for voluntary organizations, and make long-range recreational plans. Thus, most ideas originate in the municipal recreation departments where the needs of the communities are best known.

Subsection 7.—National Welfare Grant Program

The National Welfare Grant Program, established in November 1962, is designed to help develop and strengthen welfare services in Canada. For the year ending Mar. 31, 1966, \$1,500,000 was allocated to the program, an amount scheduled to grow at the rate of \$500,000 a year until an annual total of \$2,500,000 is reached. The program consists of a General Welfare and Professional Training Grant and of a Welfare Research Grant. Provincial governments, municipal welfare departments, non-governmental welfare and correctional agencies, universities and individuals may be the ultimate recipients of grants under one or more provisions of the program. Some are financed and administered entirely by the Federal Government; others require application through a provincial department of welfare, which actually makes the award on a cost-sharing basis with the Federal Government.

General welfare, bursary, training and staff development grants are shared provisions. General welfare grants provide funds for projects to improve welfare administration, to develop provincial consultative and co-ordinating services, and to strengthen and extend public and voluntary welfare services in child welfare, aging, general assistance and other welfare fields. Bursaries are provided for full-time graduate training at Canadian schools of social work, and training grants are available for employees of government and voluntary welfare agencies. Staff development grants provide support for a wide variety of staff training programs for personnel employed, or to be employed, in public and non-governmental welfare agencies.

The other provisions of the program are administered and financed by the Federal Government. Welfare scholarships are awarded, on the basis of annual nation-wide competition, for graduate study in Canadian schools of social work. Fellowships are awarded in the same way for advanced study at Canadian and foreign universities to applicants who have demonstrated leadership qualities and ability in the fields of administration, teaching and research in Canadian welfare. Teaching and field instruction grants assist Canadian schools of social work with the salaries of additional staff required to implement the welfare grant program.

Under the Welfare Research Grant, funds are provided for a variety of surveys, studies and research projects undertaken by public and voluntary welfare and correctional agencies, universities and research institutions.

¹ Includes payments made to schools of social work and to voluntary agencies located in the province.

Subsection 8.—Vocational Rehabilitation

The nation-wide vocational rehabilitation program, started in 1952, was consolidated and extended under the Vocational Rehabilitation of Disabled Persons Act, 1961. Under federal-provincial agreements to share equally the costs of co-ordination, assessment and provision of services to disabled individuals, of training personnel and of research, the provinces have developed comprehensive programs in co-operation with existing services. Approved services comprise medical, social and vocational assessment, counselling, restorative services, vocational training and employment placement. They are designed to assist individuals having a substantial physical or mental disability to become vocationally useful in gainful employment or in the home. A provincial co-ordinator of rehabilitation is responsible for the co-ordination and administration of vocational rehabilitation services to disabled individuals in each province. In 1965, the provincial staff employed in vocational rehabilitation totalled 230.

The National Co-ordinator of Rehabilitation in the federal Department of Labour administers the federal aspects of this program. The National Advisory Council on the Rehabilitation of Disabled Persons advises the Minister of Labour and is composed of representatives of the provinces, employers, labour, the medical profession, national voluntary agencies and the universities. In the year ended Mar. 31, 1965, federal-provincial expenditures under the program (exclusive of vocational training) totalled \$1,284,424. Full reports were received on 2,179 disabled persons rehabilitated during the year; before rehabilitation most of these persons and their dependants relied on private or public assistance for support at an estimated annual cost of \$1,500,000 but following rehabilitation the estimated amount earned by those gainfully employed was \$4,600,000.

In 1958, with the establishment of the Division on Older Workers, the Department of Labour's educational efforts designed to encourage a more favourable employment climate for older workers became centred in the National Co-ordinator's office. The functions of the Division include the development of a long-range educational program; the encouragement of research; the maintenance of liaison with employer and labour organizations and voluntary agencies in Canada and other countries; and the assembly and dissemination of information. The Division is becoming widely known as a central source of information on the employment problems of older persons.

Medical rehabilitation, vocational training and special employment services for the handicapped are available as integral parts of the federal-provincial rehabilitation program. The Technical and Vocational Training Assistance Act, administered by the

Department of Labour, provides for equal sharing by Canada and the provinces of the cost of approved programs for the training of disabled persons for gainful employment. During 1964-65 there were 3,981 disabled persons enrolled in various courses; federal payments amounted to \$655,000. Referrals for job placement are made to some 380 Special Services Officers in 144 local offices. Special placements of handicapped persons who required assistance in finding work in 1964-65 (including those referred from provincial rehabilitation authorities) numbered 22,198.

Other Federal Government programs providing direct services for particular groups are administered by the Department of Veterans Affairs for disabled, chronically ill and aged veterans, by the Department of Citizenship and Immigration for disabled and handicapped Indians, and by the Department of Northern Affairs and National Resources for the training and resettlement of disabled Eskimos and Indians within its jurisdiction.

Section 3.—Provincial Welfare Programs

Major welfare programs governed by provincial legislation include mothers' allowances, general assistance and social allowances, services for the aged, and child care and protection. In most provinces responsibility for a number of the programs is shared by the provinces and their municipalities. Provincial administration of welfare services is carried out through the department of public welfare in each province; several departments have established regional offices to facilitate administration and to provide consultative services to the municipalities.

Provincial departments of public welfare are placing increasing emphasis on standards of administration and on rehabilitative services for social assistance recipients. All provinces continue to extend and improve services on behalf of older citizens and efforts are being made to assess their particular needs. In Ontario, for example, a Select Committee on Aging was established on May 8, 1964 to enquire into problems of major concern to older citizens and to make appropriate recommendations to the Legislature.

The main efforts in child welfare have been directed toward improvement of standards and greater flexibility of services, with particular emphasis on preventive casework services for children in their own homes, development of specialized children's institutions, group-living homes, and the finding of adoption homes for all children in need of them.

The public services are supplemented by those of an impressive number of voluntary agencies whose interests include the welfare of families and children and of groups with special needs, such as the aged, recent immigrants, youth groups and released prisoners. Welfare councils and social planning councils contribute to the planning and co-ordinating of local welfare services. Local voluntary agencies and institutions may receive public grants, depending on the nature and standard of the services they render, although, with the exception of the semi-public children's aid societies, their main support may be from united funds or community chests, or from sponsoring organizations.

Subsection 1.—Mothers' Allowances

All provinces make provision for allowances to needy mothers. A number of provinces include such allowances in a broadened program of provincial allowances to several categories of persons with long-term need or have incorporated this legislation with general assistance within a single Act, while continuing separate administration. In British Columbia, on the other hand, aid is provided to needy mothers under the general assistance program on the same basis as to other needy persons.

Subject to conditions of eligibility which vary from province to province, mothers' allowances or their equivalents are payable from provincial funds to applicants who are widowed, or whose husbands are mentally incapacitated or are physically disabled and unable to support their families. They are also payable to deserted wives who meet

specified conditions; in several provinces to mothers whose husbands are in penal institutions, or who are divorced or legally separated; in some, to unmarried mothers; and in Ontario, Quebec and Nova Scotia to Indian mothers. Foster mothers are eligible under certain circumstances in most provinces.

The age limit for children is 16 years in most provinces, with provision made to extend payment for a specified period if the child is attending school or if he is physically or mentally handicapped. In all provinces applicants must satisfy conditions of need and residence but the amount of outside income and resources allowed and the length of residence required prior to application vary, the most common period being one year. One province has a citizenship requirement.

8.—Mothers' Allowances, by Province, as at Mar. 31, 1964 with Totals for 1960-64

¹ Includes dependent fathers assisted under the General Welfare Assistance Act. ² An additional 3,275 families with 9,774 children were assisted under Part III of the Public Welfare Act; cost of allowances for this group is not available separately. ³ Caseload merged with social assistance; no separate figures available. ⁴ Exclusive of British Columbia.

Subsection 2.—General Assistance

All provinces make legislative provision for general assistance on a means or needs test basis to needy persons and their dependants who cannot qualify for other forms of aid, and some provinces include those whose benefits under other programs are not adequate. Where necessary, the aid may be for maintenance in homes for special care. Besides financial aid for the basic needs of food, clothing, shelter and utilities, a number of provinces also provide incapacitation or rehabilitation allowances, counselling and home-making services, and post-sanatorium care. This assistance is administered by the province or by the municipalities with substantial financial support from the province, which, in turn, is reimbursed by the Federal Government under the Unemployment Assistance Act for 50 p.c. of the provincial and municipal assistance given (see p. 325).

The provincial departments of public welfare have regulatory and supervisory powers over municipal administration of general assistance and may require certain standards as a condition of provincial aid. Length of residence is not a condition of aid in any province, but the residence of the applicant as defined by statute determines which municipality may be financially responsible for his aid. This rule does not apply in three provinces; British Columbia and Saskatchewan have equalized municipal payments and Quebec does not require its municipalities to contribute to general assistance costs. Provinces with unorganized areas take responsibility for aid in these districts. Under the federal Unemployment Assistance Act, all provinces have agreed that residence shall not be a condition of assistance for applicants who move from one province to another. For persons without

provincial residence (usually a period of one year), aid may be given by the province or the municipality and a charge-back may or may not be made to the province or municipality of residence.

The formula for provincial-municipal sharing of costs is determined by the province. A substantial proportion of the costs of aid given to needy persons is borne by the province through the assumption by the province of responsibility for aid to certain categories of persons and through reimbursement of municipal expenditures.

A number of provinces provide provincially administered allowances to persons with long-term need: persons who are unable to support themselves because of mental or physical disability or because of their age, mothers with dependent children and, in two provinces (Ontario and Quebec), needy widows and unmarried women of 60 years of age or over. Municipalities are reimbursed for costs of aid given under municipally administered programs in amounts that vary by province from 40 p.c. to 100 p.c. In Nova Scotia and New Brunswick, the province also reimburses the municipalities for 50 p.c. of the costs of administration and, in British Columbia, the province shares with the municipalities expenditures on the salaries for social workers. In Newfoundland all aid is provincially administered.

Subsection 3.—Living Accommodation for Elderly Persons

In all provinces, homes for the aged and infirm are provided under provincial, municipal or voluntary auspices. These homes are required to meet standards set out in provincial legislation relating to homes for the aged, welfare institutions, or public health. Voluntary homes are usually provincially inspected and in some provinces must be licensed.

Most of the provinces make capital grants toward the construction or renovation of homes for the aged by municipalities or voluntary organizations and exempt homes for the aged from municipal taxation; some guarantee the repayment of loans made for the construction of homes. Most provinces also make provision for capital grants to municipalities, voluntary organizations, or limited-dividend companies for the construction of low-rental housing for the elderly. These projects are usually built under Sect. 16 of the National Housing Act, which provides for long-term low-interest loans to limited-dividend companies constructing low-rental self-contained or hostel accommodation for the elderly. Units for the elderly may also be included in low-rental public housing projects for families built under Sect. 35 of the National Housing Act. Three provinces guarantee the repayment of loans made for the construction of low-rental housing, and one province pays an annual maintenance grant for such housing.

In some provinces efforts are made to place well, elderly people in small proprietary boarding homes. Elderly persons who are chronically ill may be cared for in chronic or convalescent hospitals, private or public nursing homes and some homes for the aged. All provinces contribute to the maintenance of needy persons in homes for the aged or other homes for special care, and these costs are shared by the Federal Government under the Unemployment Assistance Act (see p. 325).

The Province of Ontario has given an impetus to the provision of recreational centres for the elderly through the passing in 1962 of the Elderly Persons Social and Recreational Centres Act. This Act provides for a provincial grant of up to 30 p.c. of the cost of constructing or acquiring a building for use as a centre if the local municipality contributes 20 p.c. of the cost.

Subsection 4.—Child Care and Protection

Child welfare services, which include child protection and care, services for unmarried parents and adoption services, are provided in all provinces under provincial legislation and are administered by a division of child welfare within the provincial department of welfare. The program may be administered by the provincial authority or the responsibility may be delegated to local children's aid societies, that is, to voluntary agencies with

boards of directors, operating under charter and under the general supervision of provincial departments; in Quebec, child welfare services are administered by recognized voluntary agencies and institutions, religious and secular. In Newfoundland, Prince Edward Island, Saskatchewan and, to a large extent, in Alberta, they are administered by the province; in the larger urban centres of Alberta there is some delegation of authority to the municipality. In Ontario and New Brunswick, a network of local children's aid societies, operating under statutory authority, is responsible for the services. In Nova Scotia, Manitoba and British Columbia, services are administered by local children's aid societies in the heavily populated areas and by the province in other areas.

Children's aid societies and the recognized agencies in Quebec receive substantial provincial grants and sometimes municipal grants and in many areas they also receive support from private subscriptions or from community chests or united funds. Maintenance costs for children in care of a voluntary or public agency may be borne entirely by the province—as in Alberta, Saskatchewan, Manitoba, Prince Edward Island and Newfoundland—or partly by the municipality of residence and partly by the province.

The child welfare agencies, provincial or private, have the authority to investigate cases of alleged neglect and, if necessary, to apprehend a child and to bring the case before a judge upon whom rests the responsibility of deciding whether in fact the child is neglected. When neglect is proven, the court may direct that the child be returned to his parent or parents, under supervision, or be made a ward of the province or a children's aid society or, in Quebec, be placed under the authority of a suitable person or agency whose services may involve casework with families in their own homes, or care may be provided in foster boarding homes, in adoption homes or, for children who need this form of care, in selected institutions. Children placed for adoption may be wards or they may be placed on the written consent of the parent. Adoptions, including those arranged privately, number about 13,000 annually.

Child welfare agencies make use of the small selective institution for placement of children who are forced to be away from their own homes for a short period or who may need preparation for placement in foster homes, and emphasis is increasingly being placed on group-living homes. The development of small, highly specialized institutions, which function as treatment centres for emotionally disturbed children, is of particular significance. Institutions for children are governed by provincial child welfare legislation or by special statutes dealing with welfare institutions, and by provincial or municipal public health regulations. The institutions are generally subject to inspection and in some provinces to licensing, and are usually required to make reports to the province on the movement of children under their care. Sources of income may include private subscriptions, provincial grants, and maintenance payments on behalf of children in care, payable by the parents, the placing agency or the responsible municipal or provincial department.

Services to unmarried parents include casework services to the mother and possibly to the father, legal assistance in obtaining support for the child from the father, and foster-home care or adoption services for the child. Support for unmarried mothers may be obtained under general assistance programs. In many centres, homes for unmarried mothers are operated under private or religious auspices.

Day nurseries for the children of working mothers are established only in the larger centres and chiefly under voluntary auspices. Licensing is required in five provinces but Ontario is the only province with a Day Nurseries Act.

Section 4.—International Welfare

Canada plays an active role in a number of international agencies concerned with social welfare development. These include the United Nations Social Commission, which studies and reports on world social conditions, including such special aspects as levels of living, community development, social services and social defence. Canada is a member of the Executive Board of the United Nations Children's Fund (UNICEF) which provides

assistance to mothers and children in less-developed countries. Other international agencies with welfare interests, in whose work Canada participates, include the International Labour Organization (see Index) and the International Social Security Association. Through the Colombo Plan and other bilateral aid programs, Canada provides social welfare assistance as well as other kinds of help to developing countries (see pp. 171-174).

In addition to these activities and contributions by the Canadian Government, Canadian voluntary agencies are also active in providing aid to developing countries and participating in international discussions of welfare matters.

This work, whether governmental or voluntary, has taken on new significance in the United Nations Development Decade, with the growing realization throughout the world that progress depends upon people as much as upon machines and materials. Having pioneering experience in many fields of social development, Canada is equipped to give special assistance in the promotion of human welfare abroad.

PART III.—HEALTH AND SOCIAL WELFARE EXPENDITURES

Section 1.—Government Expenditures on Health and Social Welfare

In the six years ended Mar. 31, 1959-64, expenditures of all levels of government on health and social welfare rose from \$2,821,000,000 to \$4,087,000,000, an increase of almost 45 p.c. If these figures are adjusted to take account of the growth in population, the increase in per capita expenditures—from \$164 to \$215—was somewhat less at about 31 p.c. Government expenditures may also be measured in relation to major economic indicators; on this basis, annual government expenditures on health and social welfare rose over the 1959-64 period from 11.1 p.c. to 12.3 p.c. of the net national income and from 8.4 p.c. to 9.3 p.c. of the gross national product. The federal share of health and social welfare expenditures fell from 73.9 p.c. in 1958-59 to 68.5 p.c. in 1963-64, the provincial share rose from 22.2 p.c. to 28.5 p.c. and municipal outlays declined from 3.9 p.c. to 3.0 p.c.

Of considerable interest is the growing proportion of government expenditures on health and social welfare taken up by health programs; in 1958-59 such programs accounted for \$624,000,000 or 22 p.c. of the total and in 1963-64 for \$1,365,000,000 or almost 34 p.c.

An outline of the principal components for 1963-64 shows the magnitude of the major programs and services—family allowances payments amounted to \$538,000,000, old age security payments to \$808,000,000, unemployment insurance benefits to \$366,000,000, veterans pensions and allowances to \$173,000,000 and \$83,000,000, respectively, and payments from the Prairie Farm Emergency Fund to \$10,000,000. These income-maintenance programs were entirely the responsibility of the Federal Government.

Federal-provincial income-maintenance programs required expenditures of \$78,000,000 for old age assistance, \$7,000,000 for blindness allowances, \$40,000,000 for disabled persons allowances and over \$214,000,000 for unemployment assistance, the latter including some municipal expenditure. Workmen's Compensation Boards spent \$112,000,000 on cash benefits for pensions and compensation and the provincial governments spent about \$43,000,000 on mothers' allowances. Welfare services for Indians and for veterans and the national employment service accounted for \$38,000,000 at the federal level and child welfare services required an expenditure of almost \$51,000,000 by provincial governments.

In the field of health, federal grants to the provinces under the Hospital Insurance and Diagnostic Services Act totalled \$392,000,000 and grants for hospital construction and general health grants to the provinces and municipalities amounted to \$53,000,000. The Federal Government spent \$29,000,000 on its Indian and Northern Health Services

and \$46,000,000 on hospital and treatment services for veterans. Provincial expenditures on hospital care are estimated to have totalled \$620,000,000, and \$80,000,000 was spent on other health services. Workmen's Compensation Boards paid \$48,000,000 for medical aid and hospitalization, and municipal governments spent \$79,000,000 on health.

¹ Estimated.

Section 2.—Expenditures on Personal Health Care

Expenditures made on personal health care services, for the purposes of this Section, include the amounts spent by hospitals and the amounts received by physicians, dentists, pharmacists for prescription services, and by other paramedical professionals in the provision of health care and treatment directly to individuals. No attempt is made to include expenditures on public health, or public or private capital expenditures such as the building or extension of hospitals or other health facilities. Also excluded are the cost of administration of public health programs and other technical services as well as the cost of administering voluntary profit or non-profit health insurance plans. On the other hand, expenditures by the three levels of government on behalf of individuals are included.

Canadians spent an estimated \$1,993,000,000 in 1963 on personal health care, which is almost two and a half times the \$804,000,000 they spent in 1954. The annual rates of increase varied from 8.2 p.c. in 1955 to 13.6 p.c. in 1956, their average being 10.6 p.c. The per capita expenditure, which was \$52.59 in 1954, rose to \$97.40 in 1962 and an estimated \$105.47 in 1963. The population increase during the period was 23.6 p.c.

The proportion of the gross national product represented by expenditures on personal health care was 3.2 p.c. in 1954 and 4.6 p.c. in 1963. Thus, one in every \$22 of production in Canada in 1963 was for personal health care goods and services as compared with one in every \$31 nine years previously.

Payments received by physicians and surgeons for providing personal medical care services comprise about 23 p.c. of total expenditures on personal health care, and were \$456,000,000 in 1963.

2.—Expenditures on Personal Health Care, 1954-63

NOTE.—Figures exclude expenditures on public health and expenditures for capital purposes.

Year	Hospital Services					Physicians' Services	Prescribed Drugs ^{2,6}	Dentists' Services	Other ^{4,7}	Total ⁴

¹ Includes gross expenditures of public and private acute, chronic and convalescent hospitals in 1954-57, and in non-participating provinces, in 1958-60; includes gross expenditures of budget review and contract hospitals in 1961-63 and, in participating provinces, in 1958-60; excludes expenditures of mental, tuberculosis and federal hospitals.

² Includes gross expenditures of public and private hospitals; excludes expenditures of federal hospitals.

³ Includes acute, chronic, convalescent, mental and tuberculosis hospitals of the Department of National Health and Welfare and the Department of Veterans Affairs; excludes hospitals of the Department of National Defence.

⁴ Items may not add to totals because of rounding.

⁵ Sold by retail drugstores only.

⁶ Estimated.

⁷ Includes estimated expenditures for services of private duty nurses, chiropractors, osteopaths and optometrists; excludes all employees of hospitals.

PART IV.—NATIONAL VOLUNTARY HEALTH AND WELFARE ACTIVITIES

A number of national voluntary agencies carry on important work in the provision of health and welfare services, planning research and education, supplementing the services of the federal and provincial authorities in many fields and playing a leading role in stimulating public awareness of health and welfare needs and in promoting action to meet them. The functions of twenty important voluntary agencies are described in the 1962 Year Book at pp. 270-274.

Voluntary Medical Insurance.—About 10,800,000 Canadians, or 56 p.c. of the population of Canada, had voluntarily secured some protection against the costs of physicians' services at the end of 1964. This protection was provided by 62 non-profit plans with an enrolment of 6,450,000, and 79 private companies giving coverage to an estimated 5,250,000 persons; overlapping enrolment in the two groups amounted to about 900,000. The 10,800,000 net total was 4,900,000 above the 1955 figure, which represented only 38 p.c. of the population.

The non-profit plans took in about \$191,600,000 in premiums and \$4,300,000 in other revenue in 1964, paid out \$174,000,000 in benefits and \$13,500,000 for administration, and were left with a surplus of approximately \$8,400,000. Thus, for every dollar

of premiums, 91 cents were paid out in benefits, which amounted to approximately \$29.67 per person covered. In 1955, benefit payments had been \$11,400,000, representing 89 cents of the premium dollar and amounting to only \$13.17 per person.

Profit-making private companies wrote \$119,700,000 of premiums for health protection in 1964. They paid out \$92,000,000 in claims.

PART V.—VETERANS SERVICES*

The Department of Veterans Affairs administers most of the legislation known collectively as the Veterans Charter and also provides administrative facilities for the Canadian Pension Commission, which administers the Pension Act and Parts I to X of the Civilian War Pensions and Allowances Act; for the War Veterans Allowance Board, which administers the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act; and for the Secretary General (Canada) of the Commonwealth War Graves Commission.

The principal benefits now available to veterans are medical treatment for those eligible to receive it, land settlement and home construction assistance, educational assistance for the children of the war dead, veterans insurance, general welfare services, unused re-establishment credit, disability and widows pensions and war veterans allowances. The work of the Department, except the administration of the Veterans' Land Act, is carried out through 17 district offices and five sub-district offices in Canada and one district office in England; the benefits of the Veterans' Land Act are administered through seven district offices and 25 regional offices across Canada.

In the Department's continuing efforts to foster the memory of Canada's war dead, ceremonies were held in Europe in June 1964 commemorating Canadian participation in and honouring the dead of both World Wars. During the 1964 Royal Visit, Her Majesty the Queen, accompanied by His Royal Highness the Prince Philip, laid a wreath on Canada's 1914-1918 National War Memorial in Ottawa, to commemorate Canada's dead of all wars. Commemoration ceremonies were also held in April 1965 to mark the heroic stand of the Canadian Expeditionary Force against the first gas attacks at St. Julien, Belgium, in April 1915. On May 17, 1965, a new 75-bed Veterans Home was opened in Saskatoon, Sask., replacing buildings erected a quarter of a century earlier. On May 24, 1965, the Queen's Scarf, awarded for conspicuous gallantry under fire in the South African War, became part of the Canadian heritage when it was presented to the Governor General of Canada in a moving ceremony on Parliament Hill. The Scarf, one of eight crocheted by Queen Victoria shortly before her death, was won by Private Richard Rowland Thompson, originally of Cork, Ireland, who served with the Canadian Forces in the South African War and was the only member of the Canadian Forces so honoured. The Scarf now rests in the Canadian War Museum at Ottawa.

Section 1.—Pensions and Allowances

Disability and Dependants Pensions

Canadian Pension Commission.—The Canadian Pension Commission administers the Pension Act (RSC 1952, c. 207, as amended) and Parts I to X of the Civilian War Pensions and Allowances Act (RSC 1952, c. 51, as amended). The members of the Commission are appointed by the Governor in Council who may also impose upon the Commission duties in respect of any grants in the nature of pensions, etc., made under any statute other than the Pension Act. It reports to Parliament through the Minister of Veterans Affairs.

* Prepared by the Department of Veterans Affairs, Ottawa.

The Commission has district offices in principal cities across Canada with a Senior Pension Medical Examiner in charge and also is represented by a Senior Pension Medical Examiner in London, England, located in the district office of the Department of Veterans Affairs in that city.

The Pension Act.—Previous issues of the Year Book contain information on the development of Canadian pension legislation together with yearly statistics of numbers and liabilities.

The Pension Act makes provision for the payment of pensions in respect of disability or death resulting from injury or disease incurred during or attributable to service with the Canadian Navy, Army or Air Force in time of war or peace. Provision is also made for supplementing, up to Canadian rates, awards of pension to or in respect of Canadians for disability or death suffered as a result of service in the British or Allied Forces during World War I or World War II, or payment of pension at Canadian rates in cases where the claim has been rejected by the government of the country concerned.

Appropriation Act No. 10, Schedule D (SC 1964-65, c. 34), which received Royal Assent Dec. 2, 1964, made provision for the following increases in rates under the Pension Act, retroactive to Sept. 1, 1964: basic rates of pension for disability and death increased; maximum rate of attendance allowance increased from \$1,800 to \$3,000 per annum; rate of clothing allowance for leg amputations increased from \$96 to \$108 per annum and for arm amputations from \$42 to \$48 per annum; maximum rate of clothing allowance authorized for pensioners who wear appliances that cause excessive wear and tear of clothing increased from \$96 to \$108 per annum; and maximum pension payable to a parent in cases in which pension is in payment to a widow or divorced wife or a woman eligible by virtue of Section 36(4) of the Act increased from \$576 to \$636 per annum. The total estimated increase in annual liability as a result of these increases was about \$17,500,000.

Awards to disability pensioners and their dependants and to widows and their dependants, as well as rates of clothing allowance for leg and arm amputations, are statutory and adjustments to the new rates were made by Treasury Branch without reference to the Commission. However, the other increases in rates necessitated a review of over 8,600 cases.

The following gives a comparison of the new basic rates with those formerly in effect and applies to all ranks up to and including Colonel and equivalent ranks:—

<i>Item</i>	<i>Annual Rate Formerly in Effect</i>	<i>Annual Rate Effective Sept. 1, 1964</i>
	\$	\$
Man with 100 p.c. disability ¹	2,160	2,400
Additional Pension, if Married—		
Wife.....	720	768
One child.....	324	360
Two children.....	564	624
Each additional child.....	192	216
Widow.....	1,656	1,824
One child.....	648	720
Two children.....	1,128	1,248
Each additional child.....	384	432

¹ For assessments lower than 100 p.c., the awards are proportionately less.

Slightly higher rates of personal pension are payable for ranks above those mentioned and although these were not increased, as the additional pension for a wife and children remains the same for all ranks, a married disability pensioner who held a higher rank at the time the disability was incurred will benefit by the increased additional pension.

Attendance allowance, which is payable to a pensioner who is totally disabled, helpless and in need of attendance, and which varies from a minimum of \$480 to the new maximum

of \$3,000 depending on the degree of attendance required, is paid in addition to pension. Although a pensioner must be totally disabled to receive this allowance, the disability resulting in the need of attendance may be non-pensionable.

The Civilian War Pensions and Allowances Act, Parts I to X, makes provision for the payment of pensions to or on behalf of persons who during World War II served in certain civilian groups that were closely associated with the war effort and who suffered injury or death as a result of such service; these include merchant seamen, saltwater fishermen, auxiliary services personnel, ferry pilots of the RAF Transport Command, firefighters who served in Britain, etc.

1.—Pensions in Force under the Pension Act as at Dec. 31, 1964

Service	Disability		Dependant		Disability and Dependant	
	Pensions in Force	Liability	Pensions in Force	Liability	Pensions in Force	Liability
	No.	\$	No.	\$	No.	\$

War Veterans Allowances and Civilian War Allowances

War Veterans Allowance Board.—The War Veterans Allowance Board is a quasi-judicial body, consisting of eight members, including a Chairman and a Deputy Chairman, appointed by the Governor in Council. The Board administers the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act and reports to Parliament through the Minister of Veterans Affairs. A detailed outline of the Board's functions and responsibilities is given in the 1961 Year Book, p. 302.

War Veterans Allowances.—The purpose of the War Veterans Allowance Act is to provide an allowance to otherwise eligible veterans, widows and orphans who, because of age or incapacity, are unable to derive their maintenance from employment and have insufficient means. Since its inception on Sept. 1, 1930, the Act has been amended 12 times, the last time in 1964. This latest amendment, which was effective Sept. 1, 1964, provided for increases in the rates of allowances and in the income ceilings. The present rates are as follows:—

<u>Item</u>	<u>Monthly Rate</u>	<u>Annual Income Ceiling</u>
	\$	\$
Single.....	94	1,596
Married.....	161	2,864
One orphan.....	60	1,008
Two orphans.....	105	1,608
Three or more orphans.....	141	2,016

The increases in the single and married ceilings permitted the removal of the anomaly that existed prior to Sept. 1, 1964, whereby recipients over the age of 70 were permitted an exemption of a portion of Old Age Security Pension as income and, therefore, had a greater annual income ceiling than those under the age of 70. The restrictions governing personal property and real property are shown in the 1962 Year Book, p. 289. Application for an allowance is made to the District Authority of the regional district in which the applicant resides. There are 19 such District Authorities and their functions and responsibilities are described in the 1963-64 Year Book, p. 325.

During 1964, the War Veterans Allowance Board dealt with 3,760 recipient cases comprising appeals and referrals from District Authorities, Treasury Officers and others. The Board conceded service eligibility to 518 allied veterans who were applicants for War Veterans Allowances; 982 appeals were heard of which 531 were declined, 244 allowed and the remainder deferred or withdrawn; and eligibility to widow applicants under certain sections of the War Veterans Allowance Act was allowed in 140 cases and disallowed in 21 others. The District Authorities considered 12,000 applications, approving 8,581 and declining 3,429. To ensure continued eligibility, 91,794 recipients were either interviewed or had their financial circumstances examined. At Dec. 31, 1964, there were 83,013 recipients of War Veterans Allowances made up of 55,297 veterans, 27,430 widows and 286 orphans; 517 of the total resided outside Canada. The annual liability for all recipients was \$96,324,969.

Civilian War Allowances.—Part XI of the Civilian War Pensions and Allowances Act provides an allowance to certain groups of civilians who performed meritorious service in a theatre of actual war during World War I or World War II and to those who are in receipt of a pension under Parts I to X of the Act. Allowances are also payable to the widows and orphans of such civilians. The service requirements of these civilians are outlined in the 1963-64 Year Book, p. 326. The personal property limits and the real property limits are the same as those in the War Veterans Allowance Act. The rates of allowances and the annual income ceilings are identical to those in the War Veterans Allowance Act (see p. 338).

During 1964, the War Veterans Allowance Board dealt with 430 cases, including appeals and referrals from District Authorities, Treasury Officers and others. The Board conceded service eligibility to 277 applicants for Civilian War Allowances; 27 appeals were adjudicated of which 10 were allowed, 12 disallowed and the remainder deferred or withdrawn. The District Authorities adjudicated 439 applications, approving 268 of them and declining the remaining 171; and, in connection with continued eligibility, 1,013 recipients were reviewed in respect to their financial circumstances. At Dec. 31, 1964, there were 821 civilians, 204 widows and six orphans in receipt of Civilian War Allowances, a total of 1,031 recipients of whom five were resident outside Canada. The annual liability for all recipients was \$1,386,598.

Veterans' Bureau

The Veterans' Bureau, which is a branch of the Department of Veterans Affairs, assists former members of the Armed Forces and their dependants and former members of the various auxiliary organizations, such as merchant seamen, firefighters and others, in preparing and presenting claims to the Canadian Pension Commission; it has been in operation for 34 years. The Chief Pensions Advocate, who heads the Bureau at Ottawa, is assisted by pensions advocates, most of whom are lawyers located in the departmental district offices. The pensions advocates appear as counsel for applicants before the Appeal Boards of the Commission and, in addition, advise pensioners and applicants upon any provision of the Pension Act or phase of pension law or administration that may have a bearing on pension claims. No charge is made for the services of the Bureau.

During 1964, the Veterans' Bureau submitted 6,423 claims to the Canadian Pension Commission for adjudication, of which 33 p.c. were wholly or partially granted. These included 1,411 claims presented to Appeal Boards of the Commission. During the year, 1,208 straight entitlement claims were submitted to the Commission, based on service in World War I and peacetime, of which 161 were wholly or partially granted; claims based on service in World War II and Korea numbered 2,916, of which 943 were wholly or partially granted; and of the 888 miscellaneous claims submitted, 447 were wholly or partially granted.

Section 2.—Welfare Services

Welfare services for veterans and, where appropriate, their dependants are provided by the Welfare Services Branch. These include the administration of assigned statutes; the conducting of field work and reporting for other branches of the Department, the Canadian Pension Commission, the War Veterans Allowance Board and Services Benevolent Funds; and the provision of a rehabilitation and welfare program of advice and counselling including referral where indicated to other public or private agencies, veterans organizations, etc.

War Service Grants.—War service gratuities payable under the War Service Grants Act to veterans of World War II and the operations to restore peace in Korea are now payable only in cases where delayed application is acceptable. Re-establishment credit payable under the same Act is available up to Oct. 31, 1968. Payment of the credit, except for a balance of \$50 or less, is not made in cash to the veteran but is released on his behalf for specified purposes. Up to the end of 1964 a total of \$314,979,100 had been paid out and unused balances amounted to \$8,855,909.

2.—Re-establishment Credits Paid, by Required Purpose, 1963 and 1964

Purpose	1963	1964	Purpose	1963	1964

			Totals	395,085	307,872

Assistance Fund.—Recipients of benefits under the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act living in Canada may be granted help from this Fund provided their total income is lower than the maximum permitted by the Act. Assistance may be granted as a monthly supplement based on shelter, fuel, food, clothing, personal care and specified health costs. Single awards may also be made to meet unusual or emergency needs. Following is a summary of activities during 1963 and 1964. As monthly supplements may be continued from year to year, the number assisted in a given period is greater than the number applying.

Item	1963	1964

Proportion of expenditures given in monthly grants.....	p.c. 92	93
Persons in receipt of monthly supplements.....	No. 14,743	15,519

Education Assistance to Children.—The Children of War Dead (Education Assistance) Act provides help in the form of allowances and the payment of fees for the post-secondary education of children of those whose deaths have been attributed to military service. Assistance is restricted to children attending, in Canada, educational institutions which require secondary school graduation, matriculation or equivalent standing for admission. These include, in addition to universities and colleges, such facilities as

hospital schools of teaching and institutes of technology. From its inception in July 1953 to the end of 1964, expenditures totalled \$4,506,401, of which \$2,221,301 was spent in allowances and \$2,282,100 in fees. By the end of 1964, 3,541 children of Canada's war dead had been approved for training. Of these, 1,203 had successfully completed training—170 had obtained degrees in arts and science, 175 in education, 85 in engineering and applied science, 25 in social work, 15 in medicine, 17 in law, 76 in other university faculties, 336 in nursing, 185 in teaching and 119 in administrative and technological fields. At the same date there were 707 university undergraduates and 208 students in non-university courses receiving assistance.

Returned Soldiers Insurance.—The Returned Soldiers Insurance Act (SC 1920, c. 54 as amended) provided eligibility to contract for life insurance with the Federal Government up to a maximum of \$5,000 to any one veteran of World War I. No policies have been issued since Aug. 31, 1933. There were 48,319 policies issued during the eight years in which the Act was open amounting to \$109,299,500 and of these there were 7,087 in force with a value of \$15,158,286 on Dec. 31, 1964.

Veterans Insurance.—The Veterans Insurance Act (RSC 1952, c. 279 as amended) enabled veterans following their discharge and widows of those who died during service to contract with the Federal Government for a maximum of \$10,000 life insurance. Veterans with active service in Korea were extended eligibility to contract for this insurance by virtue of the Veterans Benefit Act 1954.

The period of eligibility to apply for this insurance will cease Oct. 31, 1968. To Dec. 31, 1964, 52,707 policies in the amount of \$171,390,000 had been issued and of these, 29,028 policies with a value of \$92,088,552 were in force.

Rehabilitation and Welfare.—Welfare officers at Departmental District Offices work closely with other branches of the Department, other public agencies at all levels and private agencies and organizations in assisting veterans and their dependants to deal with problems of social adjustment, particularly those associated with physical disabilities or the disabilities of increasing age. The latter are occurring more frequently, of course, as the age of the veteran population increases. Vocational rehabilitation is assisted through training assistance available to disability pensioners and by close collaboration of departmental welfare officers with officers of the National Employment Service and provincial rehabilitation and re-training facilities. Sheltered workshops operated at Toronto and Montreal and home assembly work in other centres produce poppies and memorial wreaths and crosses associated with Remembrance Day observances. Finished products are sold to the Dominion Command of the Royal Canadian Legion.

Section 3.—Treatment Services

Treatment Activity.—The Treatment Services Branch of the Department of Veterans Affairs provides medical, dental and prosthetic services for entitled veterans throughout Canada. Service is also provided for members of the Armed Forces, the Royal Canadian Mounted Police, and the wards of other governments or departments at the request and expense of the authorities concerned. Prosthetic services are described in detail in the 1961 Year Book, pp. 291-292.

The primary responsibility of the Branch is to provide examination and treatment to disabled pensioners for their pensionable disabilities. Other main groups of veterans receiving treatment are war veterans allowance recipients (but not their dependants), veterans whose service and need make them eligible for domiciliary care, and veterans whose service and financial circumstances render them eligible for free treatment or at a cost adjusted to their ability to pay. If a bed is available, any veteran may receive treatment in a Departmental hospital on a guarantee of payment of the cost of treatment. The pensioner receives treatment regardless of his place of residence but service to other

veterans is available in Canada only. Where Departmental facilities are not available, treatment may be received at the expense of the Department in an outside hospital by a doctor of the veteran's choice.

Under the federal-provincial hospital insurance program, DVA hospitals are recognized for the provision of insured services to veterans. Any necessary premiums may be paid on behalf of veterans in receipt of war veterans allowance. The Veterans Treatment Regulations remain the authority for the treatment of veterans (and others) in DVA institutions and elsewhere under Departmental responsibility, regardless of whether or not the hospitalization is at the expense of the insurance plan.

Medical Staff and Training Programs.—Many of the professional staffs of Departmental active treatment hospitals are employed on a part-time basis; in the main they are recommended for appointment by the Deans of Medicine of the universities with which the hospitals are affiliated. Most members of the medical staffs are engaged in teaching and private practice, and hold appointments on the medical faculties of the various universities. In the active treatment institutions, medical teaching programs are maintained, which are considered essential to attract highly qualified professional men and thus ensure the highest quality of medical care. All active treatment hospitals have been approved by the Royal College of Physicians and Surgeons of Canada for postgraduate teaching in medicine and surgery, and the majority are approved also for advanced postgraduate training in the various specialties. An extensive intern-resident program is in effect in the medical specialties as well as in other fields such as physiotherapy, occupational therapy, dietary, psychology, laboratory and medical social services. A school for the training of nursing assistants is operated at Camp Hill Hospital in Halifax. The school has an annual capacity of 70 and graduates are offered employment in other Departmental hospitals.

Medical Research.—During 1964, there were 87 projects in progress under the clinical research program. This program is varied but in the main deals with conditions affecting aging, which the Department is in a special position to investigate. Self-contained clinical investigation units have been set up in active treatment hospitals located at Montreal, Toronto, London, Winnipeg and Vancouver. (See also p. 295.)

Hospital Facilities.—Treatment is provided in 11 active treatment hospitals located at Halifax, N.S., Saint John, N.B., Quebec City, Montreal and Ste. Anne de Bellevue in Quebec, Toronto and London in Ontario, Winnipeg, Man., Calgary, Alta., and Vancouver and Victoria B.C.; also in a health and occupational centre at Ottawa, Ont., and in two domiciliary care homes located at Saskatoon, Sask., and Edmonton, Alta. The rated bed capacity of these institutions at Dec. 31, 1964 was 8,823 beds. It should also be noted that in Ottawa both acute and chronic cases that require definitive treatment are admitted to the National Defence Medical Centre. An additional 571 beds are available in veterans pavilions situated at St. John's, Nfld., Regina, Sask., and Edmonton, Alta. Pavilions are owned by the Department but are operated by the parent hospital, and medical staffs are provided by the Department.

Section 4.—Land Settlement and House Construction

The Veterans' Land Act 1942 (RSC 1952, c. 280 as amended) provides financial, technical and supervisory assistance to World War II and Korean Force veterans to enable them to engage in agriculture on a full-time or part-time basis; to acquire and operate commercial fishing establishments; to acquire, build and improve homes; and to settle on provincial, federal and Indian reserve lands.

The Act was amended in June 1965. Provision was made for substantially higher ceilings in the various categories of loans—from \$20,000 to \$40,000 for full-time farmers on economic farm units, from \$12,000 to \$18,000 for small family farmers, from \$10,800 to

\$16,000 for small-holders (part-time farmers), and from \$12,000 to \$18,000 for veterans building houses under Part II of the Act. These new loan ceilings make the assistance available under the Veterans' Land Act comparable to that provided under contemporary legislation for non-veterans, such as the Farm Credit Act and the National Housing Act. Other amendments provide for the financing of secondary enterprises—tourist facilities, farm equipment repair shops, etc.—for the small family farmer; the payment of debts "reasonably incurred"; the embodiment of the balance of previous loans in new farm loans; and authority for the Director to assist veterans in the initial financing of an establishment by the repayment of re-establishment credit or rehabilitation grants.

During 1964, over \$41,000,000 in public funds was spent on behalf of 5,372 veterans. From commencement of operations to the end of 1964 almost \$645,000,000 had been spent on repayable loans and advances and non-repayable grants. Of this amount over \$290,000,000 had been repaid, \$92,000,000 had been earned by veterans as grants, \$42,000,000 had been earmarked for grants yet to be earned, and \$213,000,000 in repayable loans was outstanding. A total of almost \$86,000,000 in interest had been received, of which \$8,500,000 was received in 1964. At Dec. 31, 1964, there were more than 51,000 accounts under administration as compared with 52,000 a year earlier.

¹ Includes 1,758 civilian purchaser accounts.

Veterans who have been settled on the basis of having repayable contracts are classified under four categories: commercial farmers whose income from farming provides a good living; small family farmers whose farm incomes are supplemented by earnings from outside employment; part-time farmers, generally referred to as small-holders, whose main or sole source of income does not relate to the property; and commercial fishermen. Prior to the 1962 amendments to the Act, it was not possible to make additional loans to settled veterans other than commercial farmers. Since such loans were authorized, 828 have been made to small family farmers, of which 330 were made in 1964, and 4,705 were made to part-time farmers and commercial fishermen including 1,368 made in 1964.

The advisory, supervisory and appraisal services of the field staff are important functions of the Administration, both at the time of settlement and subsequently. These field services are provided by a staff of credit advisers, settlement officers, field officers and construction supervisors, who are highly trained in agriculture, appraisal and construction. During 1964, more than 3,800 comprehensive advisory reports were made to assist veterans

in their farming operations and over 9,300 annual reporting visits were made to discuss operations and to plan for the next year. During the year, 4,192 properties were appraised for veteran settlement.

At the end of 1964, 5,290 veterans were insured under the VLA group life insurance plan to protect the repayment of their contract. From the inception of the plan to the end of 1964, 15 insured veterans had died and a total of \$94,001 had been paid out in benefits.

Section 5.—Commonwealth War Graves Commission

The current Charters of the Commonwealth War Graves Commission consist of two documents—the Original Charter of Incorporation dated May 21, 1917 and the new Supplemental Charter dated June 8, 1964. Under these Charters the Commission is entrusted with the marking and maintenance in perpetuity of the graves of those of the British Empire and Commonwealth Armed Forces who lost their lives between Aug. 4, 1914 and Aug. 31, 1921 and between Sept. 3, 1939 and Dec. 31, 1947 and with the erection of memorials to commemorate those with no known grave.

The Canadian High Commissioner in London, England, is the official Commission member for Canada, the Minister of Veterans Affairs is the Agent of the Commission in Canada, and the office of the Secretary-General of the Canadian Agency is in the Veterans Affairs Building, Ottawa.

PART I.—FORMAL EDUCATION*

Section 1.—The Current Education Situation

With the exception of the Second World War years, the proportion of the gross national product used for education has increased steadily over the past quarter-century, rising from 2.6 p.c. in the late 1920's to level off somewhere between 5 p.c. and 6 p.c. in the mid-1960's. This increase in expenditures on education reflects such changes as larger though fewer schools at the elementary-secondary level, the rapid increase in the number of trade and technical institutes, the increase in the number of colleges and universities, and the rapid expansion of most campuses; it also reflects rising salaries for teachers, a trend that has levelled off at the elementary-secondary level but continues in higher education. In fact, this growth relates to educators and the general public becoming aware of the changes in technology and science, the rapid population increase, urbanization, greater longevity and more leisure, and other changes now having a considerable effect on society.

Acknowledgment of the simple convention that each person ought to have as much schooling as his talents justify is stimulating change throughout education—in the expansion of kindergartens, the provision of special services for atypical pupils, expansion of trade and technical education facilities, interest in dropouts, greater variety in post-secondary schools, courses and retraining, as well as expansion of both the undergraduate and graduate university levels. The concept is often related to ideas of national progress, even to national survival, and has been generally accepted at a time when business, industry and government are all demanding more highly skilled workers and professionals.

Academic and vocational education and training account for about 2.3 p.c. of the net annual expenditure of the Federal Government, 27.8 p.c. of provincial expenditure and 30.4 p.c. of municipal expenditure. This outlay has, in part, increased public interest in education, although economists have stimulated interest in the economic aspects of education

* Prepared in the Education Division, Dominion Bureau of Statistics.

related to production and manpower. At the same time, greater concern about resources throughout industry has resulted in more interest in faculties graduating scientists and engineers.

Education facilities are expanding at all levels. At the higher education level, enrolment of full-time university students in 1963-64 was 158,388, a figure 12 p.c. above that of the previous year; in addition, part-time students numbered some 57,000. The numbers being graduated each year with first degrees has advanced in proportion to enrolments and those with second and third degrees are increasing even more rapidly. New institutions of higher education are being established in all provinces or present institutions are expanding, or both. Commissions in British Columbia and New Brunswick resulted in the establishment of new institutions in the former and a reorganization in the latter. Quebec's Royal Commission is considering the best organization of institutions to meet the needs of the province and has recommended the establishment of post-secondary institutes. In Ontario, a committee of the presidents of the universities considered the situation and, following their recommendations, the provincial government established a Department of University Affairs under the Minister of Education. Similar interesting developments and expansions are going on in the other provinces, whether to provide for junior colleges, to provide special faculties or institutes, or to place emphasis on graduate faculties. The 'trimester' system is being adopted by the new Simon Fraser University in British Columbia and Waterloo University in Ontario plans to expand its two-shift, work-study program into appropriate fields other than engineering.

At the elementary-secondary level, there is considerable activity in the field of curriculum and class organization. For example, Quebec has proposed a six-year elementary course in which pupils progress chronologically but with streaming, except that some pupils may include a remedial year at year four and finish after seven rather than six years. Saskatchewan also is in the act of revamping its curriculum into a 3-3-3-3 plan providing for three streams in each unit continuing throughout with no failures. Ontario supports a Curriculum Institute and the other provinces are seeking more efficient methods of instruction and revising content; innovations include the Initial Teaching Alphabet, the Cuisinaire method and the new mathematics.

That the education level of the Canadian population is rising is shown by the census figures of numbers of persons in school and percentages of the total population in school. The population aged 5-14 increased by 55.6 p.c. from 1951 to 1961 but the percentage at school rose by 71.7 p.c.; similarly, the population increase for ages 15-24 was 21.9 p.c. compared with an increase in school attendance of 94.1 p.c. The relative percentage increase for ages 15-24 varied among the provinces from 42.5 in Saskatchewan to 125.0 in Quebec and 279.4 in the Yukon and Northwest Territories. Since over 95 p.c. of pupils remain in school until the end of compulsory schooling, large increases can be expected only if those 16 years of age or over stay in school longer. It is interesting to discover that the situation is improving and to note the number of persons 20-34 years of age who were enrolled in school in 1961:—

Age Group	Persons in School	Level at which Enrolled		
		University	Secondary	Elementary
	p.c.	p.c.	p.c.	p.c.
20-24 years.....	8.0	61.2	34.6	4.2
25-29 ".....	1.8	56.5	31.7	11.8
30-34 ".....	1.0	40.0	40.0	20.0

From age 35 on, less than 1 p.c. of the population were at school but, of a total of 1,391,134 persons aged 65 or over, 3,685 reported that they had enrolled in school classes during the census year. This did not refer to occasional attendance, attendance at meetings, etc.; the DBS report *Participants in Further Education in Canada* states that about one adult in 25, or some 426,340 persons, took courses or attended series of meetings during the

year 1959-60. Of these, about 42 p.c. took vocational courses and 14 p.c. took academic courses leading to a high school certificate or university degree. The remainder were enrolled in general or cultural subjects.

In the participation survey, about 60 p.c. of those reporting were males; the median age was 31 years. It was also found, as with other somewhat similar studies, that those who seem to need additional education most are the least likely to enrol. More than 80 p.c. of the persons enrolled reported secondary or university education and about 40 p.c. of those with at least some university participated in further education.

According to the 1961 Census, of those aged 20-29 at school, about 70 p.c. were men and 30 p.c. women; for succeeding age groups the percentage of women increased. About 1.6 p.c. of Canadian adults reported no schooling and most of these lived in rural non-farm areas. A large proportion of those whose education ended in the elementary grades lived on farms. At the other end of the schooling hierarchy, about 3.0 p.c. of adults possessed university degrees and another 3.1 p.c. had some university education. As might be expected, almost 90 p.c. with degrees were found in urban centres. About 80 p.c. with some university education lived in urban centres where about 70 p.c. of the adult population was found.

It is safe to assert that more Canadians are staying in school longer, decade by decade, and that the proportion completing secondary education has reached the point where decisions will have to be made to determine whether or not those who wish further education will find junior or community colleges, other post-secondary schools or university places available. At present, the demand for university and technical school graduates exceeds the supply and competition for the graduates by the university itself, by government and by industry is growing, particularly for graduates in engineering and science.

Section 2.—Administration and Organization of Education

In establishing the legal framework for Confederation under the British North America Act, the provinces retained responsibility for formal education within their borders. Thus Canada has ten provincial education systems and, although they have much in common, each is unique in some ways. Most divergent are Quebec, which has in reality two systems under the same provincial government department—the one essentially French-speaking and Roman Catholic, the other English-speaking and Protestant; and Newfoundland, which has a denominational organization under a single department. In addition, Yukon Territory has its own system patterned largely on British Columbia and the schools of the Northwest Territories are administered from Ottawa by the Federal Government.

Each province has established a Department of Education with a Cabinet Minister at its head. Under him is a Deputy Minister who is a civil servant and in charge of the staff of division heads for such areas as elementary, secondary, vocational and adult education, and heads or supervisors of teacher education, curriculum, audio-visual education, etc. These, with the registrar, accountant, subject supervisors, etc., assisted by their staffs, carry on the work of the department. The inspectors or superintendents maintain liaison between the department and the school boards and teachers. In each province the school law or laws, together with the regulations issued by the Departments of Education form the legal basis for school organization and administration.

As already mentioned, each province has unique and outstanding features too numerous to mention here. The systems may be of 12 or 13 years and the organization may be a 3-3-3-3, 3-4-5 or 6 or follow some other scheme. Larger units may have been introduced and transportation provided or the unit may still be the rural school district in the farm area. Teacher education may be all conducted on university campuses, with teachers being enrolled toward a degree, or teachers' colleges may be quite separate from the university and the course provided generally of one year's duration.

All provinces are now providing trade schools and institutes of technology, which may be found under one roof or in separate buildings. It seems likely that, with more youth staying longer in school, provision will be made for more terminal courses for those students who do not wish to continue to university or who cannot meet entrance requirements. Some provinces have legislation providing for the establishment of junior or community colleges, which may perform at least three functions: to act as selective feeder colleges for the universities; to provide technical and other terminal courses; and to provide a wide variety of courses for the out-of-school population who are interested in being upgraded, following cultural pursuits or taking other courses.

Elementary and Secondary Education

Within the framework of each provincial jurisdiction, public, elementary and secondary education is administered by local education authorities operating under a Schools Act. These school boards or boards of education are responsible for establishing and maintaining schools, employing teachers, providing necessary transportation for pupils, and budgeting for the money required to build and operate the schools. Operating costs are met from local taxation supplemented by provincial grants. Building costs may be financed from current income but more commonly through debentures. School board members may be all elected, all appointed, or some elected and some appointed. The number of members varies from three in most of the small rural districts to five, seven, or even twelve or more for urban centres.

Traditionally, rural municipalities were divided into small school districts or sections of 16 or more square miles. In almost all provinces these have been or are being replaced by larger units of administration in order to provide better school facilities, improved administration and greater equalization of costs.

The public school system normally provides 12 or 13 years or grades depending on the province. Patterns for elementary and secondary levels are 6-2-3, 6-2-5, 6-3-2, 6-4-2 and 7-3-3 but the 6-3-3 pattern is the most commonly followed. The generally accepted entrance age to regular classes is six years, although the number of public and private kindergarten classes is increasing markedly.

In several provinces, Roman Catholic or Protestant minorities may organize separate schools within the public school system and in all provinces religious groups, private organizations and individuals may establish private elementary and secondary schools. Many of these schools, which are small in number except in Quebec, tend to place considerable emphasis on character-building and cultural subjects; nevertheless, in general, they follow the provincial curriculum fairly closely and prepare students for university or for entrance into the business world. Private schools in Quebec, most of which are operated by various orders of the Roman Catholic Church, are more numerous than in the other provinces.

In all provinces, increasing provision is being made for children in need of special programs, particularly in the cities where larger numbers warrant such attention. There are in Canada six schools for the blind and 13 for the deaf and in a number of centres classes for the hard-of-hearing and for those with poor vision. Special classes are also provided in most larger centres for other physically handicapped children, hospitalized and homebound children, educable and trainable retardates, and the emotionally disturbed. In addition, a limited number of classes are conducted for mentally gifted children. In most larger urban centres bright pupils are grouped into separate classes where they may advance more rapidly or be provided with an enriched program of studies; slow learners are also grouped in order that they may be given special attention suitable to their abilities.

As might be expected there is considerable variety in curriculum from province to province and, although there is some interest in the possibility of a uniform program of study across Canada, such changes as are made tend to make the curricula more varied and more applicable to the individual needs of the students.

Parent-teacher and home and school organizations are numerous and active across Canada, working toward better schooling and giving community leadership in many areas connected with child instruction and welfare.

The divergent systems of Newfoundland, Quebec and the Territories are discussed separately below.

Newfoundland.—The topographical and economic influence of the Island influenced the development of education as did pockets of settlers establishing themselves in outposts which were relatively self-sufficient. Active leadership of the churches and homogeneity of the village populations provided a minimum of overlapping of denominations except in a few industrial areas or the larger cities. A Royal Commission is considering the efficiency of the present organization with a view to increasing the education level of the Island's population.

The present system is predominantly denominational although there are amalgamated and community schools operated by the Department of Education. The schools are administered on a local basis by the five largest denominational groups—Roman Catholic, Anglican, United Church, Salvation Army and Pentecostal Mission. These operate under five superintendents, each in charge of the schools of his faith, and a member of the Department. Local boards, including the local clergymen as members, select teachers, pay salaries from government grants and look after the school property. All schools follow the provincial course of study and examinations, scholarships and diplomas are determined by an interdenominational body representing the major denominations and the Department.

Quebec.—Quebec's education system operates on a unique working compromise which was reached after nearly a century of struggle on the part of two cultures, both of which recognized education as fundamental to their way of life. Two distinct publicly administered systems operate under a common Act of the Legislature. About seven eighths of the population is Roman Catholic and the remainder forms the non-Roman Catholic, predominantly Protestant, system. Organization of the non-Roman Catholic schools is similar to that in the other provinces, whereas the Roman Catholic system is patterned somewhat after the French education system and is unique in Canada. The difference in religion is accentuated by the difference in language—teaching in most Roman Catholic schools is carried out in French and in the Protestant schools, with perhaps one or two exceptions, in English. Private schools are financed and administered by private organizations and comprise schools for infants, elementary and secondary schools, classical colleges, commercial schools and institutions giving courses at university level. Public schools are maintained through local taxes supplemented by provincial subsidies and are administered by school commissions whose members are elected in accordance with the Education Act; they are free and accessible to all children of school age.

Up to and including grade 7 in the Roman Catholic public schools, classes consist of pre-school and elementary courses; and about 1 p.c. of these are for exceptional children (retarded, slow-learning and high-ability accelerated pupils), a program growing in importance. The secondary program in grades 8 to 11 includes general, scientific, classical, special and college-preparatory divisions. In addition, there are occupational courses in grades 8 and 9, and secondary vocational programs in grades 8 to 11 covering commercial, industrial, agricultural, home economics and family institute courses, with provision for a grade 12 in the commercial section. For pre-university students there is a grade 12 which corresponds to the first year of university or fifth year of the *collège classique* which many students enter after completing year 7 and continue for eight years of further study to earn the *Baccalauréat*. The English-language Roman Catholic schools follow similar programs in elementary and secondary education. The Protestant public schools provide a seven-year elementary and four-year secondary course leading to the High School Leaving Certificate, which gives access to university. Some Protestant secondary schools provide a grade 12, from which graduates may proceed to second year university.

In Quebec, education has recently been undergoing rapid change and the trend is to provide an organization more closely resembling that in the other provinces in which there is a unified governmental authority at the provincial level. Following the recommendations of the Royal Commission of Inquiry on Education (constituted early in 1961 and issuing the first volume of its report early in 1964), the Quebec Legislature in the Spring of 1964 passed "Bill 60" providing for the creation of a new administrative structure for Quebec's education system. The Department of Youth and the Department of Public Instruction were replaced by a Department of Education. The former Minister of Youth was appointed Minister of Education and the former head of the Planning Bureau in the Department of Youth was named Deputy Minister. The latter is assisted by two Associate Deputy Ministers—one for the Roman Catholic sector and the other for the Protestant sector. Also abolished by the new Act is the Council of Public Instruction (and its Catholic and Protestant Committees of 44 and 22 members, respectively), which long constituted the real authority over the separately administered Catholic and Protestant public school systems. In its stead, as a purely consultative body in education policy-making, a representative body entitled the Superior Council of Education was set up as of July 1964; its purpose is to provide a channel of communication between the public and the Ministry and assist in keeping the education system in constant contact with the evolution of society.

"Operation 55", a three-year plan to organize the Province of Quebec into 55 school regions to provide academic and vocational education, was launched on Sept. 10, 1964. The mapping of the regions was followed by the creation of regional planning committees and by the installation of regional school boards.

The Yukon and Northwest Territories.—In the Yukon Territory, the school system is operated by the Territorial Government through a superintendent and staff at Whitehorse responsible to the Commissioner of the Territory who, in turn, receives instructions from the Minister of Northern Affairs and National Resources in Ottawa. The Education Division of the Northern Administration Branch of the Department of Northern Affairs and National Resources offers advice on education policy to the Minister and Territorial authorities. All schools, both public and separate, with the exception of the Carcross Indian Residential School (operated by the Indian Affairs Branch of the federal Department of Citizenship and Immigration in co-operation with the Territorial Government) and St. Mary's School (a quasi-private school operated by the Roman Catholic Church in Dawson) come under the direct ownership and operation of the Government of the Yukon Territory. Although there is provision for three types of schools in the Yukon—public, separate and Indian—most of the Indian children attend either the public or the separate schools. In 1961, the population was 16,000 of whom 2,200 were Indians. By choice, the schools of the Yukon follow the British Columbia education curricula.

In the Northwest Territories (the Districts of Mackenzie, Franklin and Keewatin) the school system is operated by the Education Division of the Northern Administration Branch of the Department of Northern Affairs and National Resources by agreement with the Government of the Northwest Territories. The Federal Government, as the operating agency, finances school operation and receives from the Territorial Government the pupil cost for pupils who are neither Indian nor Eskimo. Enrolment for the 1964-65 term included 2,639 Eskimos, 1,319 Indians and 2,749 others, a total of 6,707 in the Northwest Territories and Arctic Quebec combined. Yellowknife public and separate school districts and Hay River separate school district are financed partly by local taxation and partly through grants-in-aid from the Federal and Northwest Territorial Governments. Inspection and supervisory services are provided by the Education Division. Alberta education curricula, subject to increasing modifications, are prescribed for the schools of the North-

west Territories. Expansion is taking place in school accommodation and basic elementary and secondary education is being provided for all children in the Territories and for Eskimo children in northern Quebec, as well as vocational training for them and for young adults showing interest and special aptitude. The program, which is an integrated one for the children of all races in the North, provides for the construction of schools and student residences, curricula designed for a northern environment, bursaries and other student aids, and special vocational training projects appropriate to both local craftsmanship and mechanical trades in such fields as construction, transportation and mining.

Higher Education

Canada not only is a bilingual country but also has two cultural traditions. As a consequence, two somewhat different systems of higher education have developed. One, originally patterned on the French system before the secularization of higher education in France, with the majority of the institutions under control of Roman Catholic orders or groups, has in recent years adapted more and more to such North American higher education traditions as may be considered to exist while still retaining French characteristics. The other system was originally designed more according to English, Scottish and United States practices, instruction being given in English and the institutions controlled by a variety of groups—religious denominations, governments and private non-denominational bodies. Institutions comprising a third small group and giving instruction to both English-speaking and French-speaking students are operated or controlled mainly by Catholic groups. The first such bilingual institution to be established, the University of Ottawa, developed from a Catholic college opened in Ottawa in 1848. In 1965, the University of Ottawa, still bilingual, was reorganized under a non-denominational board of governors.

Large universities, with numerous faculties and provision for graduate study in many fields, are comparatively recent phenomena. Until the middle of the nineteenth century, higher education in Canada included little more than arts and theological training. From that time, more instruction in science and certain professional fields was gradually introduced. Graduate studies, to judge by the number of earned doctorates, did not acquire importance until after 1920. Only for the past 20 years or so have more than 100 earned doctorates been granted annually.

Women today comprise about 27 p.c. of full-time university enrolment; the first women students were enrolled around 1870-80 and by 1920 they accounted for 15 p.c. of the total enrolment. Most universities are co-educational, although there are numerous private Roman Catholic arts colleges for men or for women.

As there is no federal ministry of education, national planning for higher education has been hampered. Each province makes plans for the future of higher education within its own boundaries although the Federal Government does contribute to higher education costs. In addition, various national organizations attempt to study and influence certain aspects of higher education at the national level. An example of the latter is the announcement in 1963 by the Canadian Universities Foundation* of a commission to study the financing of higher education in Canada, with particular reference to the decade ending in 1975. The Commission released its report in October 1965. The study was financed by a \$100,000 Ford Foundation grant and approximately the same contribution from Canadian business and industry.

Civil legislation regarding the establishment of new institutions, or changes in existing ones, is usually enacted by provincial legislatures, except for federal military colleges and a few institutions originally established by Act of the Canadian Parliament. Once an

*On Aug. 1, 1965, the Canadian Universities Foundation became the Association of Universities and Colleges of Canada.

institution is legally chartered, control is vested in its governing body, the membership of which is indicated in the charter. The chain of authority runs from the board of governors through the president (or *recteur*) to the senate and deans to the faculty as a whole. The composition of the board of governors varies according to the type of institution. Provincial universities normally have government representation; church-related institutions have clergymen. Nearly all boards have either direct representation from the business community, other organizations and representation of alumni, or are advised by these groups through advisory boards or committees. The size of the board varies from a very few to over forty. It has ultimate control of the university and normally reserves to itself complete financial powers including the appointment of the president and most other staff. On occasion there will be faculty representation on the board, and recently there have been attempts on the part of faculty groups of many institutions to obtain greater representation on the boards of governors. The senate usually has academic matters delegated to it by the board. It is responsible for admission, courses, discipline and the awarding of degrees, and is composed mainly of faculty, although there may be alumni and representatives of non-academic groups.

Although there are variations, most students enter a university or the *cours collégial* of a college *classique* after the completion of from 11 to 13 years of elementary and secondary schooling. In from three to five years, courses of instruction lead to a bachelor's degree in arts, pure science and such professional fields as engineering, business administration, agriculture and education. Courses in law, theology, dentistry, medicine and some other fields are longer—usually requiring for admission completion of part or all of a first-degree course in arts or science. For those pursuing graduate studies and research, the second degree is normally the master's or *licence*—at least one year beyond the first degree—and the third is the doctorate, normally requiring at least two additional years beyond the second degree.

Most universities state their requirements for admission to first-degree courses in terms of the certificates of completion of secondary schooling issued by the department of education of the province in which they are located. As a general rule, they accept equivalent certificates from other provinces and countries as qualification for entrance. Universities in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Ontario (in a few cases) and British Columbia admit students at the junior matriculation level, after 11 or 12 years of schooling. Those in the other provinces admit only at the senior matriculation level, which is one year more advanced.

Trade and Technical Education and Training

Increasing use of automated processes in business and industry is resulting in a shrinking market for unskilled and semi-skilled workers. Early school dropouts are finding it increasingly difficult to find suitable employment and many are now trying to acquire in their adult years the general education or training in the skilled trades that they missed in their youth. Those persons still in the regular school system are tending to remain longer and go farther in the system, partly because of the changing attitudes of society toward education and partly for economic reasons.

Hand in hand with this growing demand for better educational facilities, educators are striving to provide comprehensive programs at all levels to meet the needs not only of the university-bound but also of the great majority who require adequate preparation for early entry into the labour force. It is now accepted that vocational education for adults as well as for youths is a public responsibility which must be provided, as needed, throughout man's working life. Education of this nature is of national concern and has a direct impact upon material prosperity, the national economy and the standard of living.

The pattern of vocational education in Canada varies from province to province and there are variations within the provinces. However, there are three basic types of institute offering vocational education—secondary schools, trade schools and post-secondary institutes of technology. Many municipal school boards provide vocational courses as part of the regular secondary school program in technical or composite-type schools. Students in these schools get some general vocational training or training in certain specific fields, such as typing or auto-mechanics, along with instruction in general academic or cultural subjects.

Trade schools, on the other hand, are open only to those who have passed the provincial school-leaving age and have left the regular school system. These schools offer specialized training and their purpose is to develop competent tradesmen. Courses at the trade level do not usually require high school graduation; the grade level demanded, which varies according to province or trade, ranges from grade 8 to grade 12.

The third type, the institutes of technology, operate at a higher level of training. Enrolment in the institutes presupposes high school graduation or at least high school standing in such relevant subjects as mathematics and the sciences. Graduates from institutes of technology are awarded diplomas of applied arts or diplomas of technology and form an essential link between professional engineers or administrators on the one hand and qualified craftsmen on the other. Most of the institutes of technology and trade schools across Canada are provincially operated.

In addition to the vocational education and training provided by these three types of publicly operated schools, many private business colleges and trade schools offer a wide variety of business, trade and technical courses, some through correspondence. Vocational education is also carried out under a system of apprenticeship training. Such training is given mainly on the job, with classes taken at the trade schools either during the evening or on a full-time basis during the day for periods ranging from three to 10 weeks a year.

Recognizing the importance of a high level of occupational and technical competence in the economic development of the country, the Federal Government through the Technical and Vocational Training Branch of the Department of Labour assists the provinces in the development of programs of technical education at different levels—for youth preparing to enter the labour market, for trade and other occupational training and re-training of adults (pre-employment and up-grading courses), and for advanced technical training. To this end, the Technical and Vocational Training Assistance Act was passed by the Federal Government in 1960 to provide financial assistance to the provinces for vocational training. The following specific measures were agreed upon by the federal and provincial governments: (1) a capital assistance program; (2) nine other programs covering technical and vocational high school training, technician training, trade and other occupational training, training in co-operation with industry, training of the unemployed, training of the disabled, training of technical and vocational teachers, training for federal departments and agencies, and student aid; and (3) an Apprenticeship Training Agreement.

The need for further research into the whole field of manpower needs prompted the later addition of a tenth program to the nine mentioned under (2) above. This program—manpower requirements and manpower training research—is designed to stimulate and encourage research projects undertaken in the provinces for providing information relating to technical and vocational training and manpower requirements, including the improvement of training programs and methods and the determination of manpower requirements. The federal contribution is 50 p.c. of provincial expenditures.

The capital assistance program, under which the Federal Government pays 75 p.c. of the provincial expenditure up to a specified total for each province, has given a tremen-

dous impetus to the development of training facilities. During the period Apr. 1, 1961 to Mar. 31, 1965, projects valued at over \$801,000,000 were approved, which, when all completed, will provide a total of 251,451 new places for students, most of whom will be enrolled in two- or three-year courses. These included the construction of 353 new high schools with facilities for vocational training plus major additions to 87 such schools; construction of 60 new trade schools and enlargement of 85 existing trade schools; and construction of 17 new technical institutes plus major additions to 21 existing institutes. In addition, 114 minor projects were undertaken involving extension to existing schools. The additional facilities are summarized by province as follows:—

<i>Province or Territory</i>	<i>New Schools</i>	<i>Major Projects Involving Additions to Existing Schools</i>	<i>Minor Projects Involving Additions to Existing Schools</i>	<i>New Student Places</i>

In addition to assisting financially with the provision of physical facilities for training, the Federal Government shares in the operating costs of the various programs conducted under the Technical and Vocational Training Agreements, including the Apprenticeship Training Agreement. These programs are closely correlated with the common objectives of training the country's labour force at all levels below university and in all fields.

Of particular concern is the need to up-grade both the educational and vocational competence levels of those already in the labour force. The Federal Government undertakes to share the expenditures made by employers in developing and operating approved training programs for their employees, particularly basic training for skill development, re-training of technologically displaced persons, and apprenticeship training; higher level and other training projects are also encouraged. A Manpower Consultative Service has been established to assist industry with problems encountered in the fields of manpower training and employment and to take part in the manpower research program.

A limited survey of organized training programs for apprentices, technicians, first-line supervisors and skilled tradesmen in such fields as manufacturing, transportation and communications, mining, quarrying and oil wells, and public utilities was conducted by the Dominion Bureau of Statistics in 1963 in co-operation with the Economics and Research Branch of the Department of Labour. Results revealed that almost 17 p.c. of the establishments surveyed conducted some organized training programs, with an incidence of 8 p.c. for establishments employing from 15 to 50 persons and 25 p.c. for those with 50 or more employees. In addition to the establishments that reported some form of organized program for their staffs, many others indicated that they gave tangible encouragement to individual employees by contributing to the payment of fees for courses or by other means.

Correspondence Courses

During 1963-64, approximately 130,000 children and adults in Canada were taking some type of correspondence course. Correspondence courses were used mainly by children in remote areas living far from a school, by ill or disabled children unable to attend school, by employed adults preferring correspondence courses to night school study, and by inmates of correctional institutions.

Academic correspondence courses at the elementary and secondary level were provided by the Department of Veterans Affairs (which offers courses to veterans, members of the Armed Forces, civil servants and inmates of federal penitentiaries) and by the provincial departments of education. During 1963-64, about 40,000 adults were taking correspondence courses from these two sources. In addition, 11,259 children were taking a complete grade by correspondence and 13,592 others were attending day school classes and taking some of their courses by correspondence.

Vocational correspondence courses are provided by the Department of Veterans Affairs, the provincial departments of education and private trade and business schools. During 1963-64, 14,124 Canadians registered for vocational correspondence courses with the provincial departments of education and the Department of Veterans Affairs, and 30,312 took courses offered by private trade or business schools.

At the university level, 6,703 students were registered for correspondence courses giving credit toward a degree or diploma, and 13,009 were taking non-credit courses of a social, cultural or professional interest.

Federal Contributions to Education

Some 24 Federal Government departments or agencies contribute in one way or another to education. Interest in education in the provinces by the Federal Government stems from its realization of the contribution of schooling to production, services and trade, and the benefits from research. The chief contributions are therefore sums or grants to assist the provincial departments with their vocational programs and grants to the universities. The University Grants Program is administered by the Canadian Universities Foundation* with amounts based on a rate of \$2 per head of population, the provincial portions being allocated to the universities according to their full-time enrolment. The student loans program is operated under the Canada Student Loans Act (SC 1964, c. 24), assented to July 28, 1964, when \$40,000,000 was set aside to enable full-time students to borrow up to \$1,000 annually, interest-free for five years—the \$5,000 or less to be repaid with interest commencing six months after the student has graduated. The loan scheme is operated by the chartered banks with the students being approved for loans by the universities and institutes of technology. The Federal Government guarantees the loans and pays the interest while the student is attending college. The amount allocated will be increased year by year in proportion to the increase in the number of persons 18-24 years of age.

Under the Technical and Vocational Assistance Act (SC 1960-61, c. 6), the Federal Government, until 1975, contributes 75 p.c. of the total spent by a province on buildings and equipment for approved projects as determined under the agreements between the federal and provincial governments which cover some ten programs. These programs cover high school vocational classes, trade schools, institutes of technology, organized training on-the-job, apprenticeship, rehabilitation, management education, etc., (see also p. 353). As already mentioned, (p. 354), the capital expenditure for vocational training in the provinces during the period Apr. 1, 1961 to Mar. 31, 1965 totalled over \$801,000,000; of this amount, over \$471,000,000 came from the federal coffers.

The Federal Government through the Canada Council in 1957 provided an amount of \$100,000,000, half of which was to be distributed among the universities for specified building and equipment purposes, similar to the distribution of grants. Interest from the remaining \$50,000,000 was to be used to assist in the development of the arts, humanities and social sciences mainly through scholarships (see p. 382).

* On Aug. 1, 1965 the Canadian Universities Foundation became the Association of Universities and Colleges of Canada.

Other contributions are more indirect and include scholarships, research grants and reports or services of value to the school. Research grants are made by the National Research Council, the Defence Research Board, the Department of National Health and Welfare, the Department of Labour and other agencies. Some Departments such as Agriculture, Health and Welfare, etc., provide materials and publications of value in the school programs and the National Museum, the National Gallery, the National Film Board and the Canadian Broadcasting Corporation contribute directly or indirectly to various school programs (see pp. 373-382).

More directly, the Federal Government is responsible for the education of the Eskimos, Indians and white persons in the Territories (see p. 350), the Indians on the reserves, prisoners in penitentiaries, members of the Armed Services and their dependants and in-service training for permanent personnel. It also assists in citizenship training and other out-of-school informal education activities.

External Aid.*—Some six thousand university students, the majority in the graduate schools, come to Canada each year from some 150 countries although the largest number are from the United States. The number has been steadily increasing year by year at about the same rate as Canadian university enrolment growth and annually represents about 6 p.c. of the total. The number of such students is about the same as the number of Canadians studying abroad of whom, again, the majority are graduate students.

Canada's External Aid Office is responsible for the operation and administration of external assistance programs, including educational assistance to Commonwealth and other countries. Since 1960, such assistance consisted of provision of 261 teachers including teacher college personnel, 61 university staff members sent out individually or in teams, and 119 technical advisers in vocational education, health and welfare, government administration and other areas as well as the provision of such services as television facilities, film units, farm forums and radio broadcasts. Some 4,500 persons under the UN agencies and Commonwealth scholars have been trained in Canada since 1950 and the number trained annually has more than doubled during the period. It is hoped that those trained will return to develop training facilities within their own countries.

From 1960 to 1964 Canada's expenditures on capital projects abroad amounted to about \$1,280,000 and some \$4,000,000 was earmarked for such projects for the two years following. Major projects include Canada Hall, a residence for the University of the West Indies in Trinidad; technical equipment to schools in Malaysia and Tanganyika; and audio-visual equipment, handicraft supplies and other teaching aids to various countries.

In 1964, under the Commonwealth Scholarship and Fellowship Plan which began in 1960, some 234 Commonwealth students were brought to Canada (see also p. 173).

Canada has a number of voluntary agencies interested in aiding students from other countries, several of which receive some assistance from the Federal Government. Among these are the Canadian University Service Overseas, the African Students Foundation, and the World University Service of Canada.

Section 3.—Statistics of Schools, Universities and Colleges

Elementary and secondary schools may be classified as either publicly controlled or private. The publicly controlled schools include: the public and separate schools under local school boards—by far the most numerous group; provincial schools which at this level are limited mainly to trade schools, correspondence courses, and special schools for

* See also pp. 171-174.

the blind and deaf; and federal schools for Indians, for children in the Northwest Territories, and for the children of members of the Armed Forces overseas. Private schools may be academic, business (commercial), trade, technical, correspondence or even a combination of these.

Institutions of higher education may be provincial, church, independent universities and colleges, or federal military colleges. In addition there are institutes of technology, teachers' colleges, theological institutions and schools for such specialized fields as nursing, agriculture, paper-making, fisheries, graphic and fine arts, languages, etc. Some of these are provincial and some private.

Continuing or adult education takes a variety of forms and reaches all levels from the basic English courses provided for newly arrived immigrants to courses of university level, and from formal courses to popular lectures and musical and theatrical performances. Most organized classes for adults operate under the auspices of universities, colleges, local school boards, churches or community organizations.

Table 1 shows full-time enrolment at all levels each year for the period 1955-56 to 1964-65 and Table 2 shows the number of schools, teachers and pupils for all types of education institutions, classified by province, for the school year 1963-64. In all types of schools the number of pupils has been increasing. The increase was first noticed at the elementary level some six years after the birth rate began to rise during the war years. About eight years later the children born during the War were entering high school and four years later they began entering university. The number of teachers is rather closely related to the number of students although the trend is toward larger classes. On the other hand, the number of schools has remained fairly constant, the increase caused by the construction of new and larger schools in urban areas being counterbalanced by the closing of many one-room rural schools.

¹ Day, residential and hospital schools administered by the Federal Government. ² Also included with "Higher Education". ³ Under Programs 3, 4, 5, 6 and 8 of the Federal-Provincial Agreement, for fiscal year 1963-64.

⁴ Includes indentured apprentices taking full-time, part-time and correspondence courses.

⁵ Included under "Publicly sponsored vocational courses".

⁶ Included with Nova Scotia.

⁷ Includes enrolment in courses sponsored by public libraries, business colleges, teacher-training institutions and Federal Government departments not distributed by province.

An attempt has been made to tabulate total expenditure on education, including formal education at all levels, vocational training of all types and also expenditure on cultural activities related to education such as adult night classes, fine arts and handicraft courses, and libraries, museums and art galleries. Such expenditure for the year 1961 is presented in Table 3, classified by source. Details of income of school boards for publicly controlled elementary and secondary schools for the years 1959-61 are given at p. 365 and financial statistics for universities and colleges at pp. 369-370.

¹ Includes the Yukon and Northwest Territories.

² Capital grants from the Federal Government are included in above items.

³ Limited to reported expenditures of public funds.

⁴ Included in "Elementary and Secondary—Public schools".

⁵ Includes capital costs from current funds.

Subsection 1.—Elementary and Secondary Schools

Control.—Direct control and operation of public schools is by school boards, which operate under school laws and regulations. Through amalgamations and consolidations, schools are now operated by boards of larger units, local boards within larger units, independent boards for rural schools, towns or cities, and some by official trustees appointed by the province in lieu of a board. As their designations imply, private schools are administered by private organizations and federal schools by federal authorities.

Table 4 gives the number of active public school boards in each province as at January 1965 and indicates the type of board, the number of official trustees and the number of board members elected or appointed to these boards.

4.—Active School Boards and School Trustees, by Province, as at January 1965

¹ Based on data reported by the Department of Education—some for 1964 and some for 1965. In January 1965 the number of independent local boards was substantially reduced.

² Boards of Education, all members of Toronto Metropolitan Board.

Enrolment.—Table 5 shows enrolment of all elementary and secondary pupils in Canada and in Department of National Defence schools overseas, and classifies them by grade. Private schools and schools for Indian and Eskimo children are included in these figures. Enrolment in private schools accounted for 4 p.c. of the total 1963-64 enrolment at the elementary and secondary levels. Schools operated by Federal Government departments, that is, schools for Indian children, schools in the Territories and overseas schools for children of Service personnel, accounted for about 1 p.c. of the total.

School enrolment has been increasing in recent years much more rapidly than the general population. Annual rates of increase in total school enrolment for the four most recent years ranged from 3.8 p.c. to 5.0 p.c.; the country's population during the same period increased annually by amounts varying from 1.8 p.c. to 2.4 p.c.

¹ Includes Ungava District of Quebec.² Total for Yukon Territory was 3,338 pupils.

Teaching Staffs.—Between the school years ended in 1944 and 1964 the number of teachers in the publicly controlled schools of the ten provinces increased 146 p.c. from 75,440 to 185,273. The number of men teachers increased 286 p.c. and the number of women teachers 110 p.c.

In 1964, in nine provinces (excluding Quebec), 84 p.c. of the teachers had at least senior matriculation and one year of teacher-training, and an additional 8.5 p.c. had one year less schooling. Median experience in the eight provinces outside of Quebec and Ontario has increased slowly from 6.7 years in 1944 to 8.2 years in 1964, despite the large number of new teachers each year. Many of these have been recruited by the cities, where the median experience has declined from a high of 16.7 years in 1946 to 13.4 years in 1954 and 8.9 years in 1964.

Between 1944 and 1964 the median salary for all teachers in the nine provinces other than Quebec increased 330 p.c. from \$1,098 to \$4,722. That for teachers in one-room schools increased 256 p.c. from \$924 to \$3,290. Naturally, the rate of increase from one year to the next has fluctuated considerably, ranging from 16.8 p.c. between 1947 and 1948 to 2.4 p.c. between 1962 and 1963. The increase between 1963 and 1964 was 4.4 p.c. as compared with 2.4 p.c. between 1962 and 1963.

¹ Fully qualified at the elementary level are teachers with junior matriculation and two or more years, or senior matriculation and one or more years of professional training. At the secondary level they are teachers with junior matriculation and four or more years, or senior matriculation and three or more years of schooling, of which one year was professional training.

² Comprises teachers and principals instructing or supervising kindergarten and elementary grades only, and those instructing or supervising both elementary and secondary grades in rural schools with five or fewer classes. Teachers and principals in Ontario are classified as elementary according to the provincial *Report of the Minister, 1962*.

³ Comprises teachers and principals instructing or supervising secondary grades only, and those instructing or supervising both elementary and secondary grades in urban centres and in rural schools with six or more classes. Teachers and principals in Ontario are classified as secondary according to the provincial *Report of the Minister, 1962*.

Financial Support.—Table 7 shows details of the income of public school boards for the years 1959-61. In most provinces, local taxation is the most important source of revenue followed by provincial government grants. In 1961, all other sources of income accounted for less than 4 p.c. of total current revenue. Newfoundland differs significantly

from other provinces in its method of school finance. Local taxation is non-existent outside of four School Tax Authorities and provincial grants are the major source of income, with other sources accounting for 11.9 p.c. of current revenue.

Usually school boards requisition the local municipalities for the sums needed to balance their budgets after taking account of provincial grants and other income. Exceptions to this rule are mostly in areas where there is no municipal organization and where the school boards assess and levy taxes themselves. School taxes are levied on land and buildings and, in some cases, on improvements and personal property. Several provinces have taken steps to equalize real property assessment.

Only four provinces collect and publish figures for debenture indebtedness, although it is the usual practice in all provinces, except Newfoundland, for boards to finance new construction, at least in part, by issuing debentures. Provincial aid toward capital expenditures may take the form of a percentage of total cost, a fixed amount per classroom or assistance with debenture debt charges. Many provinces guarantee debentures issued by school boards and others assist in marketing them.

7.—Income of School Boards for Publicly Controlled Elementary and Secondary Schools, by Province, Years Ended Mar. 31, 1959-61

NOTE.—The receipts shown in this table do not include any amounts raised by loans or the sale of bonds or debentures as all revenue of this nature must be repaid ultimately with money raised by local taxation. Figures from 1914 are given in the corresponding table of previous Year Books beginning with the 1936 edition.

Subsection 2.—Universities and Colleges

Institutions.—In 1960-61 there were in Canada 354 institutions of higher education offering one or more years of degree-credit courses—304 under the control of religious bodies (264 Roman Catholic), 23 under provincial government control, three under Federal Government control, and 24 under private non-denominational control. These institutions were distributed by province as follows:—

Province	Active Degree- Granting Institutions	Other Institutions	Total
	No.	No.	No.
Newfoundland.....	1	2	3
Prince Edward Island.....	1	1	2
Nova Scotia.....	9	7	16
New Brunswick.....	6	4	10
Quebec.....	8	204	212

Manitoba.....	3	7	10
Saskatchewan.....	5	12	17
Alberta.....	2	9	11
British Columbia.....	3	5	8
TOTALS.....	59	295	354

Enrolment.—Full-time university-grade enrolment continues to increase year by year and indications are that enrolments may well be double the 1964-65 figure of 178,238 in about seven years. Table 8 shows full-time enrolment by province for the academic years ended 1962-65. In addition to full-time students, there were about 64,000 part-time university-grade students (including over 7,000 graduate students) in attendance during the regular 1964-65 winter session and nearly 7,000 students taking university-grade credit correspondence courses.

¹ All theology enrolment included as undergraduate.

Foreign enrolment has risen considerably during the past decade, with a larger proportion of students from countries other than the United States and Britain coming to Canadian institutions, as shown in Table 9. In 1963-64 about one of every 17 full-time university students in Canada was a resident of a country other than Canada. The United States of America, Hong Kong, Trinidad and Tobago, India, and Britain each accounted for over 500 students while France, Pakistan, Malaysia, Viet-Nam, Nigeria and Jamaica contributed from 100 to 400 each. About 150 other countries or territories were represented in the figures.

Finances.—Table 13 gives a ten-year series of the finances of Canadian universities. Since 1954 they have received more than one half of their revenue from government grants and a very small amount from municipal councils. Beginning with the academic year 1951-52, the Federal Government has provided university grants to help meet current operating costs. These grants were originally paid on the basis of 50 cents per head of population in each province and the eligible institutions received their share of the provincial allotment according to the number of full-time students in undergraduate and graduate courses. The rate of grant was increased to \$1.00 per capita in 1956-57, to \$1.50 in 1958-59 and to \$2.00 in 1962-63. The Province of Quebec did not accept this grant for the years up to 1955-56. From 1956-57 to 1959-60 the payments refused by Quebec were held in trust by the Canadian Universities Foundation,* which administers the fund. In 1960-61 the Quebec Government and the Federal Government negotiated a new tax-sharing agreement under which Quebec provides its own grants and is reimbursed by an abatement of corporation tax. Table 14 gives details of the federal grants for each of the academic years ended 1963-65.

The Federal Government also provides assistance to universities through the University Capital Grants Fund which is administered by the Canada Council. The original amount in the fund was \$50,000,000 (interest and profits to Mar. 31, 1964 increased it to over \$65,000,000), to be granted in amounts not exceeding 50 p.c. of specific building or capital equipment projects, having regard to the population of each province. Up to the end of March 1964, a total of over \$54,000,000 had been authorized. Grants are paid in four equal instalments spread over the period of construction so that there is a time lag between approval and payment.

The Canada Council was also endowed with an additional \$50,000,000 (raised by \$10,000,000 Apr. 3, 1965), the interest on which is available for the provision of scholarships or other assistance in the fields of the arts, humanities and social sciences (see also pp. 382-383).

*On Aug. 1, 1965 the Canadian Universities Foundation became the Association of Universities and Colleges of Canada.

Subsection 3.—Vocational Education

Table 15 summarizes the data on full-time vocational training classes. The duration of these classes may vary from three weeks taken annually by indentured apprentices at provincially operated trade schools, to two-year vocational high school courses or three-year post-secondary courses offered in provincial institutes of technology. Numerous skills are taught, ranging from short courses in welding or typing to extended courses for instrument technicians or aircraft maintenance men. Students taking two-year or three-year vocational courses in public secondary schools may, upon completion, enter employment or may continue other formal training in a trade school or an institute of technology.

In addition to the full-time vocational courses, a great variety of part-time instruction is offered by both public and private institutions as an alternative to full-time training or as an attraction to the individual interested in a hobby.

¹ Enrolment figures based on fiscal year. ² Excludes 2,248 full-time students in one-year preparatory courses at institutes of technology. ³ In addition, there were 13,205 part-time students and 291 students taking correspondence courses. ⁴ Excludes 16,719 part-time students and 32,245 students taking correspondence courses from private trade schools and business schools. ⁵ Excludes some 19,000 part-time students.

Subsection 4.—Adult Education

Universities and colleges, federal, provincial and municipal governments, and a wide variety of private schools, employers and organizations provide for adult education activities in Canada. National voluntary organizations assist in co-ordinating these efforts, the most important being the Canadian Association for Adult Education and l'Institut canadien d'éducation des adultes.

Annual DBS surveys from 1957-58 to 1962-63 show pronounced increases in enrolment in courses for credit toward a high school diploma or a university degree, and substantial enrolments in vocational adult courses. Enrolments in courses on social and other cultural subjects did not increase as rapidly but each year account for important portions of the total enrolment.

In 1962-63, 92 universities and colleges reported a total course enrolment of 216,692, of which 40.7 p.c. was for credit toward a university degree and 28.3 p.c. was in professional training and refresher courses. Informal study included community development groups, fine arts, literature and language classes, current events study groups and marriage preparation courses. Federal and provincial government departments conducted or assisted municipal boards to conduct courses with a total enrolment of 694,705, of which 16.4 p.c. was in academic subjects for credit toward a high school diploma and 52.5 p.c. in vocational courses. Government agencies also sponsored public health courses, language and citizenship classes for new Canadians, French-English conversation groups, leadership training and fine arts courses. Other sponsors who reported, as indicated in Table 16, brought the total enrolment to 1,077,185.

In addition to organized classes and courses, sponsors of adult education arranged public lectures, film showings, exhibits, performances and similar activities, which drew a total attendance of almost 4,000,000. Institutions and agencies offering programs of adult education prepared television and radio programs, information materials, and exhibits for fairs and conferences. The National Film Board and the Canadian Broadcasting Corporation co-operated with other sponsors in the production of program materials and adult education agencies provided consultative services to organizations and individuals.

PART II.—CULTURAL ACTIVITIES RELATED TO EDUCATION

Section 1.—The Arts and Education*

Fine Art Schools, Galleries and Organizations.—Fine art (architecture, painting and drawing, commercial and decorative arts, graphics, ceramics and sculpture) appears as an elective subject of the faculty of arts in a number of universities, where it may be taken as one of five, six or more subjects for a year or two. Five universities offer a Bachelor of Fine Arts degree:—

University of Alberta, Edmonton, Alta.
 University of Manitoba, Winnipeg, Man.
 Mount Allison University, Sackville, N.B.
 Dalhousie University, Halifax, N.S.—in affiliation with the Nova Scotia College of Art.
 University of Toronto, Toronto, Ont.—B.A. with Honours in Fine Art, and also a Master's degree.

Eight universities offer a Bachelor of Arts degree with a major in fine art:—

University of Alberta, Edmonton, Alta.
 University of British Columbia, Vancouver, B.C.
 McMaster University, Hamilton, Ont.
 Mount Allison University, Sackville, N.B.
 Queen's University, Kingston, Ont.
 University of Saskatchewan, Saskatoon, Sask.
 Sir George Williams University, Montreal, Que.
 University of Windsor, Windsor, Ont.

There are many schools of art with varying academic requirements for admission. These offer diploma or certificate courses and are concerned largely with the technical development of the artist. Among those widely known are:—

Nova Scotia College of Art, Halifax, N.S.
 École des Beaux-Arts, Quebec, Que.
 École des Beaux-Arts, Montreal, Que.
 School of Art and Design, Montreal Museum of Fine Arts, Montreal, Que.
 University of Manitoba School of Fine Arts, Winnipeg, Man.
 School of Art, Regina Campus, University of Saskatchewan, Regina, Sask.
 Alberta College of Art, Calgary, Alta.
 Institut des Arts Appliqués, Montreal, Que.
 Vancouver School of Art, Vancouver, B.C.
 Kootenay School of Art, Nelson, B.C.

Courses in these schools vary in length with the requirements of the individual student but may extend over as many as four years. In some of these schools fine crafts as well as fine arts are taught. Summer schools of art are sponsored by some of the foregoing institutions, by universities and by various independent groups. One of the more important summer schools is the Banff School of Fine Arts, affiliated with the University of Alberta. Two booklets published by the Canadian Cultural Information Centre provide details on courses in the fine arts—*Facilities for Study in the Arts in Canada* and *Some Summer Courses in the Arts in Canada*.*

Public art galleries in the principal cities perform valuable educational services among adults and children. Children's Saturday classes, conducted tours for school pupils and adults, radio talks, lectures and concerts are features of the programs of the various galleries. Many of these institutions supply their surrounding areas with travelling exhibitions and some range even farther afield. Several organizations such as the Maritime Art Association, the Atlantic Provinces Art Circuit, the Western Canada Art Circuit, the Art Institute of Ontario and the Queen's Art Circuit have been founded to carry out this sort of travelling

*Further information on this subject may be obtained from the Canadian Cultural Information Centre, 56 Sparks St., Ottawa.

program on a regional basis. The National Gallery of Canada conducts a nation-wide program of this nature and is the third largest circulating agency in North America. Several galleries maintain an art-lending or rental service.

Among the principal public art galleries are:—

Beaverbrook Art Gallery, Fredericton, N.B.
 Montreal Museum of Fine Arts, Montreal, Que.
 National Gallery of Canada, Ottawa, Ont.
 Public Library and Art Museum, London, Ont.
 Art Gallery of Toronto, Toronto, Ont.
 Art Gallery of Hamilton, Hamilton, Ont.
 Willistead Art Gallery, Windsor, Ont.
 Winnipeg Art Gallery, Winnipeg, Man.
 Kitchener-Waterloo Art Gallery, Kitchener, Ont.
 Mendel Art Gallery, Saskatoon, Sask.
 Edmonton Art Gallery, Edmonton, Alta.
 Vancouver Art Gallery, Vancouver, B.C.
 Art Gallery of Greater Victoria, Victoria, B.C.
 Fathers of Confederation Art Gallery and Museum, Charlottetown, P.E.I.

Other important collections of art are housed in arts councils and university galleries. Among university galleries are:—

Fine Arts Gallery of the University of British Columbia, Vancouver, B.C.
 University of Alberta, both Calgary and Edmonton, Alta.
 Norman Mackenzie Art Gallery of the University of Saskatchewan, Regina, Sask.
 Agnes Etherington Art Centre, Queen's University, Kingston, Ont.
 McIntosh Memorial Art Gallery, University of Western Ontario, London, Ont.
 Hart House, and Sigmund Samuel Canadiana Gallery of the University of Toronto, Toronto, Ont.
 Owens Museum of Fine Arts, Mount Allison University, Sackville, N.B.
 St. John's Memorial University Art Gallery, St. John's, Nfld.
 Creative Art Centre of the University of New Brunswick, Fredericton, N.B.
 Sir George Williams University Art Gallery, Montreal, Que.
 Dalhousie University Art Gallery, Halifax, N.S.

Three of the more important galleries connected with arts councils are the St. Catharines and District Arts Council, St. Catharines, Ont., the Glenhyrst Arts Council, Brantford, Ont., and the Art Gallery of the Calgary Allied Arts Centre, Calgary, Alta.

Other Fine Art Organizations.—Among the leading art organizations of national scope, exclusive of museums and art galleries, are:—

Association of Canadian Industrial Designers
 National Design Council
 Canadian Conference of the Arts
 Canadian Council for the Environmental Arts
 Canadian Society for Education through Art
 Canadian Group of Painters
 Canadian Guild of Potters
 Canadian Handicrafts Guild
 Canadian Museums Association
 Canadian Society of Graphic Art
 Canadian Society of Painter-Etchers and Engravers
 Canadian Society of Painters in Water Colour
 Canadian Society of Landscape Architects
 Federation of Canadian Woodcarvers
 Royal Canadian Academy of Arts
 Royal Architectural Institute of Canada
 Sculptors' Society of Canada
 Town Planning Institute of Canada
 Canadian Centre for Films on Art
 Community Planning Association of Canada.

The National Gallery of Canada.—The beginnings of the National Gallery of Canada are associated with the founding of the Royal Canadian Academy of Arts in 1880.

The Marquis of Lorne, then Governor General, had recommended and assisted the founding of the Academy and among the tasks he assigned to that institution was the establishment of a National Gallery at the seat of government. Until 1907 the National Gallery was under the direct control of a Minister of the Crown but in that year, in response to public demand, an Advisory Arts Council consisting of three laymen was appointed by the government to administer grants to the National Gallery. Three years later, the first professional curator was appointed.

In 1913, the National Gallery was incorporated by Act of Parliament (RSC 1952, c. 186) and was placed under the administration of a Board of Trustees appointed by the Governor General in Council; its function was to encourage public interest in the arts and to promote the interests of art throughout the country. Under this management, the Gallery increased its collections and developed into an art institution worthy of international recognition. Today, the Gallery administration comes under the aegis of the Secretary of State. The Board of Trustees, now composed of nine members representing all sections of Canada, meets twice annually.

In 1960, the Gallery entered a new era in its history when the entire national collection and the staff and equipment necessary to its maintenance were transferred to new modern quarters—the Lorne Building in downtown Ottawa—and, for the first time, the Gallery had adequate well-lighted space for hanging its permanent collection and for displaying travelling exhibitions.

The Gallery's collections are of indisputable taste and quality. They have been built up along international lines and give the people of Canada an indication of the origins from which their own tradition is developing. The collection of Canadian art, the most extensive and important in existence, is continually being augmented by the purchase of works from the Biennials of Canadian Art and other sources. The collections include many Old Masters, among which are twelve acquired from the famous Liechtenstein collection; extensive war collections; the Massey collection presented to the Gallery during 1946-50 by the Massey Foundation; a collection of French paintings; prints and drawings; and diploma works of the Royal Canadian Academy. The prints and drawings collection consists of more than 5,000 items.

The services of the Gallery include the operation of a reference library open to the public which contains more than 10,000 volumes and periodicals on the history of art and other related subjects; the operation of an Exhibition Extension Service which prepares and circulates travelling exhibitions, provides educational services such as lectures offered to the general public across Canada, and organizes guided tours for visitors to the Gallery at Ottawa; the production of publications, films, reproductions, didactic exhibitions and other aids to art appreciation; and assistance to Canadian artists participating in important international exhibitions such as the Biennials held in Paris, Venice and São Paulo. The Conservation and Scientific Research Division of the Gallery, which had been handling requests for technical information on works of art from public and private collections across Canada, was in 1964 renamed the National Conservation Research Laboratory. A major function of the Laboratory is the conservation of the national art collection. Studies are conducted also on the effects of environment on works of art, the durability of artists' materials and the scientific identification of artistic techniques. The services of the Laboratory are offered to government departments and other art museums.

Performing Arts Schools.—Music, the most widespread of the performing arts (which also include opera, drama, ballet and dance) is a degree course in a number of universities. The following offer degree courses:—

- Acadia University, Wolfville, N.S.—B.A. with music major, and Mus. B.
- University of Alberta, Calgary and Edmonton, Alta.—B.A. major and Mus. B.
- Brandon College, Brandon, Man.—B. Mus. (Education)
- University of British Columbia, Vancouver, B.C.—B.A. major and B. Mus.
- Laval University, Quebec, Que.—B. Mus.
- University of Manitoba, Winnipeg, Man.—B.A. major and B. Mus.
- University of Montreal, Montreal, Que.—B. Mus. and D. Mus.

McGill University, Montreal, Que.—B. Mus.
 University of Moncton (affiliated college Notre Dame d'Acadie), Moncton, N.B.—B. Mus.
 Mount Allison University, Sackville, N.B.—B.A. major
 Queen's University, Kingston, Ont.—B.A. major
 University of Toronto, Toronto, Ont.—B. Mus., M. Mus. and D. Mus.
 University of Western Ontario, London, Ont.—B.A. major
 St. Francis Xavier University (affiliated College Mount St. Bernard), Antigonish, N.S.—
 B.A. major
 Université Saint-Louis, Edmundston, N.B.—B. Mus.
 University of Saskatchewan, Saskatoon, Sask.—B.A. major, B.Ed. music
 Université de Sherbrooke, Sherbrooke, Que.—B.A. major (affiliated Collège du Sacré-
 Coeur).

Advanced instruction in music is also given at the Conservatoire de Musique et d'Art Dramatique in both Montreal and Quebec, and at Mount Royal College, Calgary, Alta.

Opera may be studied at the Royal Conservatory Opera School of the University of Toronto; advanced students work in close collaboration with the Canadian Opera Company. Opera is also taught at the Conservatoire de Musique et d'Art Dramatique and the Banff School of Fine Arts (summer), Banff, Alta.

A Bachelor degree with specialization in drama may be obtained at Queen's University and the Universities of Alberta, Saskatchewan and British Columbia. Advanced instruction is also given during the summer at the Banff School of Fine Arts.

The University of Toronto has recently announced its first chair of drama, although it does not expect to offer degrees immediately. The University of British Columbia hopes to offer a postgraduate degree in theatre leading to the M.A., classes to begin in the academic year 1965-66. Some graduate courses are offered at the University of Saskatchewan, and the University of Alberta, in the academic year 1964-65, initiated a full degree course in drama.

The National Theatre School of Canada offers complete practical training for talented students. It is bilingual, winter courses being held at Montreal, Que., and summer at Stratford, Ont. Three years are required for the acting course, and two for the technical and production studies. The Manitoba Theatre School at Winnipeg, and the Medhurst Theatre School and the New Play Society Theatre School at Toronto, are also of importance.

The National Ballet School at Toronto is the only residential ballet school in Canada. It offers academic studies together with practical instruction. Professional instruction is also offered by two other major Canadian ballet companies, Les Grands Ballets Canadiens, Montreal, and the Royal Winnipeg Ballet, Winnipeg. The Canadian School of Ballet is located in Kelowna, B.C., and advanced ballet training is given during the summer at the Banff School of Fine Arts.

Section 2.—Museums and Education

Modern museums, in Canada and elsewhere, are breaking away from the old concept of being mere repositories and are assuming an important role as educational and cultural centres. They have an advantage over other agencies of education in that they are able to provide, for study and exhibition, actual, original objects as well as descriptions and pictures of such objects. Canadian museums of history and science offer many educational services to the public through exhibits, guided tours, lectures, and scientific and popular publications. The following museums have staff members who are specifically charged with organizing programs in education and providing extension services:—

Nova Scotia Museum, Halifax, N.S.
 McGill University Museums, Montreal, Que.
 National Museum of Canada, Ottawa, Ont.
 Royal Ontario Museum, Toronto, Ont.
 Saskatchewan Museum of Natural History, Regina, Sask.

Other museums that conduct educational and extension programs using the regular curatorial and administrative staff are:—

The New Brunswick Museum, Saint John, N.B.
Museum of the Province of Quebec, Quebec, Que.
The Manitoba Museum, Winnipeg, Man.
Provincial Museum of Natural History and Anthropology, Victoria, B.C.

Direct work with schools may involve the holding of classes within the museum or visits of museum lecturers, with exhibits, to the schools. More informal are the guided tours for visiting school classes, the lending of specimens, slides, filmstrips or motion picture films to schools, and the training of student-teachers in the educational use of the museum. A number of museums have special programs for children, not directly associated with school work. These include Saturday lectures and film showings, activity groups, nature clubs and field excursions.

For adults, museums offer lectures, film showings, and guided tours, the latter usually available throughout the year. Staff members may be sent to give lectures to service clubs, church groups, parent-teacher associations, and hobby clubs. The latter, such as naturalists' groups, mineral clubs and astronomy societies, may use the museum as their headquarters. Travelling exhibits are prepared for showing at local fairs, historical celebrations and conventions. At least seven Canadian museums have conducted regular radio or television programs and others have made occasional contributions. Some historical museums stage annual events during which the arts, crafts or industries represented by the exhibits are demonstrated to the public.

The National Museum of Canada.*—The National Museum originated in the Geological Survey of Canada and its early history is inseparable from that institution. The first united Parliament of Upper and Lower Canada met in Montreal in 1841. In July of that year the Natural History Society of Montreal and the Literary and Historical Society of Quebec petitioned the Government to carry out a geological survey. As a result, a resolution was passed in the Estimates on Sept. 10 to defray the expenses of a Geological Survey of the Province of Canada.

William E. Logan was appointed the first director of the Geological Survey in 1842. He and his assistant, Alexander Murray, undertook their first field work in 1843, and their collections formed the humble beginnings of the National Museum. Logan was much more than a mere geologist and his interests extended to other branches of natural science. His diaries contain accurate drawings of named plants. He wrote in his annual report for the year 1852-53: "It may be a consideration whether a growing country like Canada could not afford to anticipate what future importance may require in the nature of a national museum and at some future time not far distant, erect an appropriate edifice especially planned for the purpose."

In the meantime, the officers of the Geological Survey continued to collect for the geological museum. In 1856, Elkanah Billings, a palaeontologist, was added to the staff, the first of a number of specialists, and the legislation passed that year to continue the work of the Geological Survey specified the establishment of a geological museum, open to the public, to exhibit specimens, books and instruments.

In 1874, the practice of recording the number of visitors to the Museum was commenced; from May 1874 to April 1875 the number of visitors was 1,017 and by the year ended April 1896 it had reached 31,595. In 1874, the distribution of specimens of minerals, rocks and other natural history objects to schools was started with a donation to the Board of School Teachers of Elora, Ont. The first organized Museum lecture program was undertaken in 1912, with a series of lectures for young people after school; by 1915, Saturday morning lectures for children and evening lectures for adults—both features of the Museum program today—were in operation.

*Prepared by Dr. A. W. Billfield, Director, Natural History Branch, and Dr. R. Glover, Director, Human History Branch, National Museum of Canada, Ottawa.

The scope of the Museum was enlarged in the "Act to make better provision respecting the Geological and Natural History Survey of Canada and for maintenance of the Museum in connection therewith", of Apr. 28, 1877. In that Act the Survey was instructed "to study and report upon the flora and fauna of the Dominion" and "to continue to collect the necessary materials for a Canadian museum of natural history, mineralogy and geology". As early as the Act of 1856, the Geological Survey of Canada had been authorized "from time to time" to distribute publications relative to the Survey. From this authority developed the Museum's celebrated series of scientific bulletins presenting the researches of its staff.

The Act of 1877 established the Geological Survey and the Museum on a continuing basis and permitted the appointment of specialists in connection with natural history research. John Macoun was appointed to establish the division of biology in 1882. He was an eminent botanist who had accompanied the expedition of Sanford Fleming to explore Western Canada in 1871. Macoun's report of 1874 laid the groundwork for the establishment of western Canadian agriculture. He also published a catalogue of Canadian birds. In 1895 under the third Director of the Geological Survey, George M. Dawson, the Museum entered the field of Canadian anthropology.

Prior to 1880, the Museum occupied several buildings in Montreal but that year the Geological Survey moved to Ottawa, occupying the former Clarendon Hotel on Sussex Street. Construction of the Victoria Memorial Museum building was started in 1904 and the Geological Survey moved in in 1910. The Museum began an expanded program of research and exhibition under the direction of R. W. Brock, then Director of the Geological Survey of Canada. Unfortunately this program was curtailed during World War I because the burning of the Parliament Buildings, in 1916, forced Parliament to occupy the Museum building until 1919. Later, expansion of the exhibition halls was handicapped by the Museum sharing its building with the National Gallery of Canada and the Geological Survey of Canada.

However, in 1927, the Governor General in Council gave authority "to designate the museum branch of the Department of Mines as the National Museum of Canada". In 1950, the National Museum of Canada was transferred to the Department of Resources and Development (now the Department of Northern Affairs and National Resources) and in 1964 it was transferred to the Department of the Secretary of State. Since the end of the Second World War, particularly after the appointment of Dr. Frederick J. Alcock as Chief Curator, the Museum has increased its research, education and exhibition staff in order to play a more important role in the cultural life of Canada and perform the tasks properly assigned to the National Museum of Canada. A new National Museum building will be constructed in the heart of Ottawa within the next few years.

The responsibilities of a great museum include the collection, preservation, storage and study of objects related to the various disciplines that fall under its purview. The next step is the undertaking of research by specialists in those fields and the publication of their findings to increase the total knowledge of their subjects. Typically, museums exhibit items from their collections as intrinsically beautiful displays and also to teach the public the scientific background to the subjects. This leads to the educational program of museums which usually includes lectures, workshops, guided tours for children and activity groups, travelling exhibits, loans, library service, and radio and television programs.

The National Museum of Canada is now organized to present all these facets for the enjoyment and education of the people of Canada. It is divided into two Branches—the Human History Branch and the Natural History Branch. The Human History Branch contains the Divisions of Archaeology, Ethnology and Folklore, and History, together with the Canadian War Museum and the National Aviation Museum. The Natural History Branch contains the Divisions of Zoology, the National Herbarium, and Geology and Palaeontology. Services common to both Branches are concerned with exhibitions, educational, technical and administration functions. In 1964-65 the staff

totalled 183, including 40 administrative and professional personnel, 81 technical, operational and service personnel, 32 clerical personnel and 30 casual and prevailing rate employees.

The 1965 field research program in natural history included seven expeditions to various parts of Canada. The work included the conclusion of an investigation of the mammals of the northern Yukon Territory, studies of the avifauna of western Quebec and the eastern slope of the Rocky Mountains in southwestern Alberta, the conclusion of studies of the herpetofauna of the Prairie Provinces and the mollusc fauna of the Hudson Bay drainage. The fishes of the Prince Rupert district were studied, as were the vascular plants of British Columbia. In addition, several taxonomic studies of certain invertebrate animal groups were sponsored at Canadian universities.

The exhibition program in 1964-65 included the completion of a full-sized cougar diorama and a smaller sage grouse group. Work was started on three small bird dioramas—Rocky Mountain alpine birds, Point Pelee spring migrants and a Lake Erie hawk migration—as well as on a full-sized Gatineau beaver group. The West Coast Indian exhibit was renovated and the Iroquois and Plains Indians exhibits were almost completed. Plans were laid for the exhibition halls to be built for the new National Museum Building, scheduled for completion by the end of 1968. The education program continued with weekly lectures for adults, Saturday morning film programs for children, the junior nature club, the school loan collection, children's classes, guided tours, and the Canadian collection of nature photographs. During 1964 the National Museum recorded 271,897 visitors, the Canadian War Museum 206,365, the National Aviation Museum 125,212, and the National Aeronautical Collection at Rockcliffe 22,891.

During the past five years there has been a marked growth in the research carried out by the Human History Branch. Much of this is done under contract by scholars whose work is wholly or partly financed by the Museum, on the understanding that the Museum shall receive their collections and the right to publish their reports. This system has proved valuable in forging links between the National Museum and universities or other museums, and in developing archaeology and ethnology in Canada as well as in enriching the national collection and the Museum's publications. The 1964 field research program in human history included a wide variety of work all across the country by Museum staff or by scholars under contract to the Museum. Among the projects undertaken or assisted by the Archaeology Division were research on the extinct Beothuk Indians of Newfoundland, research on the Debert palaeo-Indian site in Nova Scotia, a survey of the Temiscouata region of Quebec and various studies in Ontario, southern Keewatin and all provinces west of Ontario. The work of the Ethnology Division included studies of the Micmac language spoken in the Maritime Provinces, of songs and oral traditions in British Columbia and of stories connected with Eskimo "legend carvings" at Povungnituk, Que. The Division sponsored a conference at the Museum on Algonkian linguistics which was attended by specialists in this field from all over the Continent. Much work was also done in planning future exhibits for all fields of human history.

The exhibition program in 1963-64 included the completion of the Hall of Canadian Mammals and the renovation of the exhibits of small mammals and the Hall of Birds. The exhibition program continued with weekly lectures for adults, Saturday morning film programs for children, the junior nature study club, the school loan collection, children's classes, guided tours, and the Canadian collection of nature photographs.

Section 3.—The Educational and Cultural Functions of the Canadian Broadcasting Corporation

Many hours of educational and semi-educational programs are broadcast annually by the Canadian Broadcasting Corporation's radio and television facilities. Whether these programs are directed to children or adults, entertainment is combined with information

whenever possible. Spoken-word programs, presented as readings, talks, discussions, documentary programs, dramatizations or in forms combined with music, cover a very wide range of interests.

Programs of an adult education nature are presented frequently by the CBC English Networks, and co-operation in program planning is received from various educational organizations. The CBC is an active participant in the Joint Planning Commission, a body established by the Canadian Association for Adult Education for exchange of information and co-ordination of plans for adult education in Canada.

Citizens' Forum, a series broadcast on radio and television for many years by the CBC, uses discussions, public debates and small seminars to describe important issues of the day. *Citizens' Forum*, or *The Sixties* as it is known on television, is arranged jointly by the Canadian Association for Adult Education and the CBC. Its French counterpart, *Place publique*, is planned in co-operation with l'Association canadienne de l'éducation des adultes. Similar types of broadcasts are prepared specially for rural listeners under *National Farm Radio Forum* which is arranged by the CBC in co-operation with the Canadian Federation of Agriculture and the Canadian Association for Adult Education. This unique educational program involves listening groups who continue the discussion of the topic at the conclusion of the program and funnel their opinions to provincial and national centres for use and distribution. Other daily service and educational programs are provided for farmers. *Country Calendar* and *Country-time* are weekly half-hour television programs of a service and educational nature designed to keep farmers and the general public in tune with agricultural conditions and developments. *Le réveil rural* on radio and *Les travaux et les jours* on television are French-language counterparts of the English farm programs.

In addition to *Citizens' Forum*, the regular television program *CBC Newsmagazine* presents weekly interview and documentary programs. *Caméra '65* on the French television network reports on national and international events and actualities. A series of English television documentaries and dramatizations, entitled *Explorations*, examines questions in the fields of sociology and history. Special programs on the Winter Conference of the Canadian Institute on Public Affairs are also broadcast. This three-day weekend conference examines sociological questions in open meetings and group discussions.

For a little more than a decade, the summer evening sessions of the Couchiching Conference have been broadcast. This week-long conference, organized jointly with the Canadian Institute on Public Affairs, examines Canadian and international affairs in open meetings and group discussions. Other radio programs of an educational nature are *Science Review*, which focuses on important discoveries in the field of the natural sciences and their branches, and *L'Université radiophonique internationale*, a French network series of talks exchanged with other countries on cultural and scientific subjects.

The French network series, *Fémina*, is presented five times a week for women listeners. The French network also broadcasts a number of weekly programs dealing with fine arts, music, literature, theatrical arts, sciences, religion and philosophy under the auspices of Le Service des émissions éducatives et d'affaires publiques.

Take Thirty, a week-day television show for women, has a different 'flavour' on each program—entertainment and interviews of performers; travel topics and features on events in Canada and abroad; cooking, child care and household management; discussions on social problems; and interviews with men and women from the sporting world. The closest radio counterpart of *Take Thirty* is *Trans-Canada Matinée*.

In addition to its school and pre-school broadcasts and other entertaining and informative children's programs on radio and television, the CBC has given time to higher education through co-operation with universities in Toronto, Montreal and Ottawa to broadcast television series locally under the title *Live and Learn*. These programs have been designed to give a general appreciation of academic subjects such as physics, chemistry, literature and psychology. Experimentally, the University of Toronto and the CBC have produced *Beginning Russian*, through which viewers could prepare themselves for university course

credits; other experiments in the production of courses for university credits are in progress in Montreal. CBC Radio's *University of the Air* presents lectures by professors distinguished in their particular fields.

English network radio and television schedules of the CBC have always reflected the many facets of Canadian culture, the basic principles of a national broadcasting service in this country being that a national service must be a complete service for all sections of the population, link all parts of the country, be Canadian in content and character, and serve the two main language groups and the various geographical regions. *The Learning Stage*, which deals with literature, sociology, science, music, labour relations, philosophy, ecology, creative processes, theatre, arts, ethics, political science and French, is broadcast on CJBC Monday to Friday. This is the only English program to be presented on the French-language CBC station in Toronto.

As the centenary of Confederation draws near, the CBC has taken steps to share in celebrating the occasion in 1967. During the past three years, there has been an increase in the number of CBC programs devoted to Canadian ideals and heritage. Special programs have been produced for radio and television covering all phases of Canadian history, bringing, through dramatic documentary productions, the story of Canada to Canadians from coast to coast. Radio and television profiles of Canada's political leaders have given new life to the pages of the country's history and future programming plans include co-operation with the National Film Board in producing many more dramatic documentaries and biographies over the next few years. A start has been made on an oral-history project for which outstanding Canadians in many walks of life are presenting personal reminiscences on audiotape and film for future use.

Section 4.—The Educational and Cultural Functions of the National Film Board

The National Film Board, an agency of the Federal Government, was established by Act of Parliament in 1939 and reconstituted by the National Film Act in 1950. In the years since its establishment, the Board has grown from a supervisory body over Canadian Government motion picture activities to a national documentary film-producing and -distributing organization whose films about Canada are seen wherever people may freely assemble. The Board produces and distributes filmstrips and still photographs on Canadian themes in accordance with its primary function outlined in the Act "to initiate and promote the production and distribution of films in the national interest". Films are produced primarily in the English and French languages and, whenever possible, foreign language versions are prepared to increase the usefulness of Board films in foreign countries.

The 16mm. community film program is based on a nation-wide system of film circuits, film councils and libraries, strongly supported by organizations and individuals engaged in community activities. There are more than 700 national, provincial and community film distribution outlets from which thousands of 16mm. prints are available for public use throughout the country. These prints are acquired for circulation by purchase or by loan from the Board.

A large part of the 16mm. community film audience is reached through classroom showings, indicating progress in the development of audio-visual aid programs in Canadian schools and universities. Another noticeable trend is the more selective use of films by community organizations and groups for particular purposes. This is attributed in part to the availability of Board productions which present series of film studies related to central themes, and to the availability of a broad range of topics which include individual films particularly suited to group objectives and programs.

Films produced by the Board are shown in commercial theatres and on television in Canada and abroad and newsreel features are also issued regularly for theatrical and television purposes. Distribution of theatrical subjects is arranged by contract with commercial distributing organizations.

Series of original films are shown regularly over English-language and French-language television networks in Canada. Individual films from the Board's extensive general library are available to CBC and privately operated stations. Abroad, because of expanding television facilities in many countries, Board films are seen by audiences which could not otherwise be reached.

In addition to commercial distribution through theatres and television in other countries, 16mm. print circulation is carried on through posts of the Departments of External Affairs and Trade and Commerce, through National Film Board territorial offices at London in England, Paris in France, New York, Chicago and San Francisco in the United States, New Delhi in India, and Buenos Aires in Argentina, as well as through libraries operated by various education agencies. Hundreds of prints of National Film Board films are also sold in other countries each year. Exchange agreements are in effect between the Board and government film-producing organizations in other lands; this means that films of various nations are freely exchanged with those of Canada, aiding international understanding.

The National Film Board maintains a library of more than 150,000 still photographs, which are available at nominal cost to magazines, newspapers and other periodicals wishing to present current information about Canada.

Section 5.—The Canada Council

As a result of recommendations made by the Royal Commission on National Development in the Arts, Letters and Sciences, appointed in 1949, the Canada Council was established in 1957 to promote the study and the enjoyment of, and the production of works in the arts, humanities and social sciences. A sum of \$100,000,000 from the public treasury was granted to the Council, one half of which was placed in a University Capital Grants Fund to assist institutions of higher learning to expand their building facilities in the arts, humanities and social sciences, and the remainder set up as an Endowment Fund, the current annual income from which is approximately \$3,150,000. In addition, the Canadian Parliament on Apr. 3, 1965, approved an unconditional grant of \$10,000,000 to the Council to meet the Council's most pressing needs in the arts, the humanities and the social sciences over the next few years. The Council expects to use the \$10,000,000, and the interest earned on it before it is spent, over the next three years to add to the income from its Endowment Fund.

The Council is made up of 19 members appointed by the Governor in Council for terms of three years, plus a chairman and a vice-chairman who are selected for five-year terms. Members are ineligible for reappointment during the 12 months following their second consecutive term on the Council. The organization must meet at least three times a year to consider applications made to it by organizations and individuals across the country. The day-to-day administrative work is carried out by a permanent staff in Ottawa.

University Capital Grants Fund.—A major responsibility of the Council has been toward Canada's institutions of higher education. The Fund, which is now nearing depletion, has enabled the Council to make grants to universities and other institutions of higher learning by way of capital assistance in respect of building projects in connection with the arts, humanities and social sciences, with the following limitations: (1) a grant for any one project may not exceed one half the total expenditure made in respect of that project; (2) in any province the aggregate of the grants made may not exceed an amount that is in the same proportion to the aggregate amount credited to the University Capital Grants Fund as the population of the province (latest census) is to the aggregate population of the provinces in which there is a university or other similar institution of higher learning. By Mar. 31, 1965, almost \$56,250,000 had been authorized for payment by the Council to 81 institutions for a wide variety of buildings. Libraries, classrooms and residences claimed the major share.

Aids to Individuals.—Because in 1957 less than 10 p.c. of the graduate fellowships available in Canada were for studies in the humanities and social sciences, the Canada Council allocated over \$1,000,000 from the income of the Endowment Fund to the establishment of a scholarship and fellowship program to assist in meeting the rapidly growing needs of the future for university teachers. In seven years, almost 3,500 scholars have been aided through awards at the master's, doctorate and postdoctorate level. As a further stimulus to academic pursuits, grants are made to universities to enable them to bring outstanding lecturers to their campuses and travel grants are awarded to permit Canadians to attend international conferences and thus maintain contact with scholars from other countries.

Individual assistance is also given in the arts. In seven years, more than 1,100 scholarships have been awarded to enable singers, dancers, painters, writers and other performing and creative artists to continue their studies or perfect their arts. Other artists had benefited from the Council's program of commissioning grants; such grants enable theatres, orchestras, soloists, art galleries or museums to commission and perform or display original works by Canadian artists.

Aid to Organizations.—A large proportion of the revenue from the Endowment Fund is devoted to a program of assistance to organizations in the arts and letters. Since income from this source is limited, the Council seeks to support the best talent possible, which involves a large investment in some of the major population centres and at the same time covers other areas of the country. This it does by combining grants for excellent service in local or regional areas with awards to enable organizations to travel to more remote parts of the country where the arts are less readily available. It also seeks to ensure local support by insisting that organizations receiving grants find additional revenue from other sources. In the year ended Mar. 31, 1965, the Council gave \$1,434,000 to organizations in the arts, humanities and social sciences. Of this sum, \$1,192,000 went to arts organizations—about \$370,000 to music, \$115,000 for festivals, \$572,000 for opera, theatre and ballet, \$50,000 for the visual arts and \$60,000 for art publications. There were both large and small grants, and groups assisted ranged from the National Ballet of Canada (\$95,000), the Montreal Symphony Orchestra (\$50,000), the Canadian Opera Company (\$75,000) and the Stratford Shakespearean Festival (\$50,000) to Le Théâtre de l'Estoc (\$3,000), the London Public Library and Art Museum (\$1,800) and the periodical *The Fiddlehead* (\$500). These sums covered a variety of purposes, from regular seasonal programs to cross-Canada tours and the commissioning of new works.

Considerably less assistance went to organizations in the humanities and social sciences since the bulk of the scholarship program is directed toward these subjects. Aid was given for special library collections, conferences and publications, and for several academic projects. Altogether, \$242,000 was given for these purposes.

UNESCO.—The Act establishing the Canada Council also provided that the organization should undertake certain functions in relation to the United Nations Educational, Scientific and Cultural Organization. The Council accordingly established a National Commission for UNESCO with 30 members and approximately 58 organizations with "co-operating body status", and also provided the secretariat for the Commission. With the assistance of the National Commission, the Council is responsible for the co-ordination of UNESCO program activities in Canada, for Canadian participation in UNESCO program activities abroad, and for proposals for future UNESCO programs. In all these matters the Council works in close association with the Department of External Affairs and serves as the normal channel of communication between the Department and the Commission. In the year ended Mar. 31, 1965, the Council spent approximately \$100,000 in respect to the National Commission.

Section 6.—Library Services

The National Library.—The National Library of Canada came into existence formally on Jan. 1, 1953 by the proclamation of the National Library Act (RSC 1952, c. 330). On the same date it absorbed the Canadian Bibliographic Centre, which had been engaged in preliminary work and planning since 1950. The Act established a National Library Advisory Council, consisting of the National Librarian, who serves as Chairman, the Parliamentary Librarian, and twelve appointed members, at least one of whom must be from each of the ten provinces.

By 1964, although the Library was still housed in temporary quarters and only a limited purchasing program could be undertaken, the book collection consisted of over 250,000 volumes, supplemented by microcopies of more than 100,000 additional titles. Under the terms of the Copyright Act and the Library's own Book Deposit Regulations, 7,273 titles were received in the year ended Mar. 31, 1965, 5,204 of which were related in some direct way to Canada.

Canadiana, the Library's monthly catalogue of new books and pamphlets relating to Canada, described over 12,000 items in 1964; these included trade and general publications, and official publications of the federal and provincial governments. *Canadiana* has been published since 1950 and is cumulated annually; a cumulated index is in preparation.*

The National Union Catalogue lists 9,500,000 volumes in 224 government, university, public and special libraries in all provinces. New accessions are reported regularly by these libraries, and the Union Catalogue thus forms a continuously up-to-date key to the main book resources of the country. During the year ended Mar. 31, 1964, the Reference Division was asked to locate nearly 30,000 titles and it is noteworthy that copies of 80 p.c. of them were found in Canadian libraries. About one third of the requests were for books in the field of science and technology and 80 p.c. were for books published since 1925.

In addition to *Canadiana*, the National Library publishes bibliographies and the annual cumulation of the *Canadian Index to Periodicals*.

A permanent National Library and Archives Building is under construction on Wellington Street west of the Parliament Buildings in Ottawa; the \$10,000,000 building will be ready for occupancy late in 1966.

The National Science Library.—The National Research Council Library serves as the library for the Council and as the National Science Library of Canada. Plans for developing a central scientific library were proposed as early as 1924 by the Honorary Advisory Council for Scientific and Industrial Research, established in 1916 and now known as the National Research Council (see pp. 390-397). The Library grew slowly until 1928 when the Council's first research laboratories were set up. Since then it has been developed to parallel the growth and expansion of the laboratories and the national interests and activities of the Council with the result that in 1953, under an agreement with the more recently established National Library, the National Research Council Library formally assumed responsibility for national library services in the fields of science and technology. By 1964, the Library's collection, comprising over 560,000 volumes, was growing at the rate of 130,000 items a year and included journals and other serial publications, books, pamphlets and technical and research reports. The bulk of this material is housed in the main Library with smaller and more specialized collections in six branch Libraries.

The resources of the Library are made available by means of an extensive inter-library loan and photocopying service. For purposes of current awareness, the Library issues twice a month its *Recent Additions to the Library*, and a list of *Serial Publications in the Library* is also issued at frequent intervals through the use of data processing equipment.

*A list of 400 selected titles of "Books About Canada", prepared by the National Library, appears in Chapter XXVII of this volume.

Reference and research services include answering requests for scientific information, literature searches and the compilation of abstracts and bibliographies, and the identification and location of obscure publications.

The Canadian Index of Scientific Translations, a card index to the location of completed English translations in Canada and other countries, is maintained by the Library. Translations of scientific articles prepared by the Library's Translations Section are listed and made available in Canada and abroad. A complete English translation of the Russian journal *Problemy Severa (Problems of the North)* is also the responsibility of this Section.

The National Science Library is responsible for the publication of the *Union List of Scientific Serials in Canadian Libraries* and the *Directory of Canadian Scientific and Technical Periodicals*.

Public Libraries.—Municipal, regional and provincial public libraries serve most of the urban, suburban and rural population of Canada. Provincial government agencies are responsible for public library service and delegate this authority to municipal and regional boards, which organize, and largely finance, public library systems for local populations. Provincial agencies provide general supervision, grants and, in some cases, technical services and other assistance.

In addition to books and other printed material for children and adults, they provide films and filmstrips and organize public lectures and other group activities. Public libraries are playing an increasingly important role in the lives of Canadian students of all ages, assisting them to complete school assignments and further their education. Distribution agencies include branches and depots, bookmobiles and other vehicles, boats in Newfoundland and aircraft in the Territories.

In 1963, public libraries in Canada stocked more than 16,609,000 books and the total book circulation was 70,418,478 or 3.7 per capita. They spent \$1.29 per capita on current operating payments and another 16 cents per capita on capital and debenture items, or a total of over \$27,000,000. Local funds accounted for almost 80 p.c. of this amount and provincial grants for 13.2 p.c., the remainder coming from other sources.

1.—Summary Statistics for All Public Libraries, 1963

Province or Territory	Population Served	Libraries	Stocks of Books, Periodicals and Pamphlets	Circulation	Current Operating Payments	Full-Time Staff

Totals, 1962.....	12,996,051	874	15,580,359	65,143,573	21,931,095	2,962

University, College and School Libraries.—Libraries in 73 universities and colleges with enrolments of 100 or more full-time students had more than 9,000,000 volumes in stock in the academic year 1962-63, or 63 volumes per full-time student. Expenditures of these libraries averaged \$80.08 per student and amounted to a total of more than \$8,500,000. The full-time staff of the libraries numbered 1,446, almost one third of whom were professional librarians.

More than 2,000 schools in 281 urban centres of over 10,000 population had centralized school libraries in 1962-63, serving more than 1,213,000 pupils. These libraries contained 6,084,702 volumes, or 5.0 per pupil served, and an average of \$2.45 per pupil was spent on books and other library materials. One half of the libraries employed full-time or part-time librarians; the other libraries reported no staff. Most of the staff were employed in secondary schools.

2.—Book Stocks in the Larger Academic Libraries and Enrolment Served, by Province, Academic Year 1962-63

Province	University and College Libraries				Centralized School Libraries			
	Libraries	Volumes	Enrolment Served	Expenditures per Full-Time Student ¹	Libraries	Volumes	Enrolment Served	Payment for Books per Pupil

¹ Full-time and equivalent.

Special Libraries.—The latest figures available for special libraries are for 1961. In that year 580 government and private special libraries contained more than 5,600,000 volumes as well as large stocks of pamphlets, periodicals, microcards, microfilms and other material. Most of the special libraries were located in Ontario (250), Quebec (150), and British Columbia (52).

Library Education.—Five Canadian universities give degree courses in library science—McGill, Montreal, Ottawa, Toronto and British Columbia. In 1964, there were 290 bachelor of library science graduates, about 70 p.c. of whom were women. Almost 42 p.c. secured positions in university libraries, about 25 p.c. in public libraries, over 7 p.c. in school libraries, and the remainder in special libraries and elsewhere. The median beginning salary of the graduates was \$5,247.

3.—Library School Graduates, 1964

Library School at—	Graduates		Destinations				Median Beginning Salary
	Male	Female	Public Library	University Library	School Library	Other and Unknown	
	No.	No.	No.	No.	No.	No.	\$

SECTION 4. RESEARCH IN GEOPHYSICS AND ASTRONOMY	404	Subsection 3. University Research	409
		Subsection 4. Industrial Research	411
		SECTION 6. FEDERAL GOVERNMENT EXPENDITURES ON SCIENTIFIC ACTIVITIES	414

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

The characteristic problems of this country, particularly its large area, its small population and its unique industrial structure, have led to a typically Canadian organization of research. Early research was, of course, related to the primary industries. Geological mapping and agricultural research were almost the only areas of activity until the beginning of the present century. In 1898 research in the field of fisheries was assigned to an independent honorary board which has continued to the present as the Fisheries Research Board. In 1916 the Federal Government set up the National Research Council; its early duties were to encourage and stimulate research in the universities through grants and scholarships and it entered active research only with the establishment of its own laboratory system in the late 1920's and early 1930's. Great expansion in scientific research took place during the War when the National Research Council assumed the responsibility for research for the three Armed Services including the development of atomic energy. At the end of the War, the Council returned to its previous activities—the promotion of research in the universities and research for secondary industry. The Defence Research Board was established in the Department of National Defence with responsibility for military research (see Chapter XXVI). In 1952, the Crown corporation, Atomic Energy of Canada Limited, was established to proceed with the development of atomic energy in Canada, and certain other Crown corporations such as Eldorado Mining and Refining Limited, Polymer Corporation Limited and Canada's largest national utility, the Canadian National Railways, developed important research programs.

Industrial research has been slow to develop in Canada. While certain large industries, particularly the chemical industry and pulp and paper industry, had a long history of successful research effort, the primary resource base of other industries was not conducive to the establishment of research laboratories. Also, the prevalence of foreign-owned manufacturing companies exerted considerable influence on the development of industrial research. Canadian subsidiaries of foreign companies had ready access to the research and development results of their parent companies and Canadian companies had little incentive

* A Selection of Canadian Achievements in Science and Technology, 1800-1964, compiled by Dr. John R. Kohr of the National Research Council, Ottawa, appears in the 1965 Canada Year Book, pp. 398-401. This is available in reprint form from the Dominion Bureau of Statistics, Ottawa.

to establish their own laboratories or to develop products specifically for the Canadian market. However, Canadian industry in general is now greatly extending research facilities and becoming much more aware of the advantages to be gained therefrom.

There are no large profit-making research institutes in Canada although several laboratories are available to undertake consulting, testing and experimental work in technological and engineering fields. Nor are there many non-profit research institutes in operation. The Ontario Research Foundation is the largest of this type in Canada. It is a self-governing research institute that engages in research and development on contract for manufacturers, departments of government and on its own account. Although initially financed by an endowment fund subscribed partly from industry and partly from government, its current revenue is derived largely from sponsored research. The British Columbia Research Council operates in a similar manner. Co-operative research through research associations is likewise a minor factor in Canadian research activity. The Pulp and Paper Research Institute of Canada (see Forestry Chapter) is the only example of a major research association. This Institute's operating funds are provided by industry but, from the outset, the Institute has represented a co-operative partnership between the Federal Government, McGill University and the pulp and paper industry. For many years the Government provided a grant which was replaced in 1956 by the construction and equipping of a laboratory for the use of the Institute. The Federal Government now has under way, at a cost of \$3,000,000, an extension to these laboratory facilities to meet the increasing demands of the pulp and paper industry for more advanced and diversified research essential to the maintenance of its competitive position in world markets.

Thus, there are three main sectors of research in Canada—government research, university research and research in industry. These three elements are covered in some detail in the following Sections and Subsections.

Mechanism for the Federal Science Policy.—In the federal sphere, the ultimate authority for policy on science resides in the Cabinet. To exercise this authority there was established by the National Research Council Act (RSC 1952, c. 239, as amended) a Cabinet committee known as the Committee of the Privy Council on Scientific and Industrial Research. This Committee comprises those Cabinet Ministers having departments with scientific responsibilities and certain other Ministers who have an indirect concern with scientific affairs. These federal departments and agencies advise the Privy Council Committee on the scientific aspects of their own departmental responsibilities and on the organization and support of research required for their own purposes. The National Research Council, on the other hand, advises the Committee on general science policy, particularly on research in the universities, in industry and in fields not specifically the responsibility of the departments or agencies.

In 1949 the Privy Council Committee broadened the structure of its advisory mechanism by the addition of an advisory body of senior officials to which it might turn for joint advice on the formulation and conduct of government scientific policies. Thus the Committee has now two advisory bodies—the National Research Council and the Advisory Panel. The Council, being composed of non-government scientists representing the universities, industry and labour, is admirably suited to keep the Committee informed of the effect of government policy on the scientific activities of the country at large and to advise on the actions necessary to maintain the universities and independent research institutes in a healthy condition. The Panel, on the other hand, being composed of senior government officials, is the appropriate body to consider government policy affecting departmental activities and to advise the Committee on government action. The President of the National Research Council, as chairman of both bodies, provides for co-ordination and the proper division of responsibilities.

In 1964 Canada moved toward integration and stimulus of research with the creation of a Scientific Secretariat in the Office of the Prime Minister. The Secretariat was established as a result of the recommendations of the Royal Commission on Government Organization and those of Dr. C. J. Mackenzie, former President of the National Research

Council. The first director and organizer of the new Secretariat is Dr. F. A. Forward, a former head of the department of metallurgy at the University of British Columbia. The Secretariat has the task of assembling, digesting and analysing information related to the Government's scientific and technological activities, including their interrelationships with university, industrial and provincial scientific establishments.

Section 1.—The National Research Council*

History and Organization.—Organized research in Canada on a national basis dates from 1916 when the Government of Canada established the Honorary Advisory Council for Scientific and Industrial Research—now known by the short title "National Research Council". The early Council provided for the planning and integration of research work, organization of co-operative studies, postgraduate training of research workers, and prosecution of research through grants to university professors. This promotion and encouragement of research formed the basis of the Council's work from 1916 to 1924.

The creation of a central research institute, to carry on research in pure science in relation to standards of measurement, quality and composition of material, and in science applied to the industries of Canada, had been urged as early as 1918. A special committee of Parliament endorsed the proposal and in 1924 the Research Council Act was revised to include national research laboratories. Temporary quarters were secured and research on magnesian refractories for steel furnaces was carried out so successfully that a wartime industry, established during World War I, was re-established on a large scale. As a result of this achievement, the Government, in 1929-30, provided funds for new research facilities.

The National Research Building on Sussex Drive, Ottawa, was opened in 1932 and in 1939 construction was begun of an aerodynamics building on a 130-acre site on the Montreal Road, just east of the city. This site now comprises some 400 acres and houses most of the Council's laboratories. A Prairie Regional Laboratory built on the campus of the University of Saskatchewan has been in operation since June 1948, and an Atlantic Regional Laboratory on the campus of Dalhousie University in Halifax, N.S., was opened in June 1952.

Under the terms of the Research Council Act, the National Research Council has charge of all matters affecting scientific and industrial research in Canada that may be assigned to it by the Committee of the Privy Council on Scientific and Industrial Research. In discharging these responsibilities, the Council may undertake, assist or promote research. Its duties include the utilization of Canada's natural resources; the improvement of industrial processes and methods; the discovery of processes and methods likely to expand existing industries or to develop new ones; the utilization of industrial wastes; investigation and determination of physical standards, methods of measurement, and fundamental properties of matter; the standardization and certification of scientific and technical apparatus used by government and industry; the determination of standards of quality for materials used in public works and government supplies; investigation and standardization, at the request of industry, of industrial materials or products; and research intended to improve conditions in agriculture. The Council also has the duty of advising the Privy Council Committee on questions of scientific and technological methods affecting the expansion of Canadian industries or the utilization of the country's natural resources. As a service to Canadian science, the Council maintains scientific liaison offices in Ottawa, London, Washington and Paris. The liaison officers abroad also serve as scientific attachés in the Canadian diplomatic missions. The National Research Council Library, with holdings of more than 500,000 volumes in science and technology (including 12,000 journals and other serials), acts as the National Science Library of Canada (see also p. 384).

* Revised by Joan Powers, Public Relations Office, National Research Council, Ottawa.

The Council's laboratories are organized in ten divisions and two regional laboratories, each with its own director. Six divisions are engaged in applied and fundamental studies in the natural sciences—biosciences, applied and pure chemistry, applied and pure physics and radiation biology. Four others are devoted chiefly to engineering work—building research, mechanical engineering, radio and electrical engineering, and the National Aeronautical Establishment. The two regional laboratories carry out research related to the resources of the prairie and Atlantic regions.

A Medical Research Council, fully responsible for the support of medical research but functioning under the general administration of the National Research Council, was established in November 1960 (see p. 295).

The National Research Council consists of the President, two Vice-Presidents (Scientific), one Vice-President (Administration) and 17 other members, each of the latter group being appointed for a term of three years and chosen to represent industry, labour, and research in science and engineering. Many of the members are drawn from Canadian universities. The Council reports to Parliament through the Committee of the Privy Council on Scientific and Industrial Research.

The Council's 1965-66 budget, excluding the provision for the activities of the Medical Research Council, is about \$60,000,000, approximately \$22,000,000 of which is required for foundation work—scholarships and research grants in science and engineering. The remainder is used to operate the laboratories and to provide for the Council's industrial research assistance program. Of the Council's 2,629 employees, some 749 are scientists and engineers.

Links with Industry.—The application of science to Canadian industry has always been one of the major concerns of the National Research Council. Since 1917, representatives of industry, government and the universities have co-operated, through NRC Associate Committees, in solving pressing industrial and economic problems. There is a constant flow of personnel and information between NRC laboratories and those of industry, and roughly 90 p.c. of the Council's own effort involves applied research intended for industrial use. Contract research on specific projects and a wide variety of testing and standardization work are undertaken. Inventions from NRC laboratories are carried through the patent stage, then made available for manufacture through Canadian Patents and Development Limited (see p. 133).

One of the Council's most important activities is its Technical Information Service. This consists of field engineers who visit manufacturing establishments, and a staff of trained researchers in Ottawa who use the technical literature available through the Council's Library. All inquiries are handled but the Service is particularly interested in helping small firms with no research or information facilities. Free advice is given on all aspects of materials and processing, equipment, plant design and packaging and on such topics as wage incentives and inventory control.

Direct financial assistance for research performed by Canadian industry was begun by the Council during 1962. Under this arrangement the Council makes grants supporting long-term applied research and development work proposed and carried out by industry. Aid is given on a shared-cost basis, with industry supplying at least half the funds for any one project. Companies of all sizes, representing a wide range of industrial activity, are eligible for assistance and the companies retain all rights arising from the work. In 1964-65, at a cost of \$2,200,000, the Council supported 121 research projects carried out by 78 Canadian firms. This work gave rise, also, to more than 500 new research positions.

Foundation Aspects.—University research in science and engineering has been supported by the Council since its inception in 1916. This aid has been of considerable help to the universities in building up the excellent graduate schools that now exist in Canada. Awards to individuals make up most of the university support program. Included are research grants to university staff used for employing assistants and purchasing

equipment and supplies, postgraduate scholarships, and post-doctorate fellowships. Approximately 1,700 research grants and 995 scholarships and fellowships were awarded in the year ended Mar. 31, 1965, at a cost of \$17,800,000.

General promotion and encouragement of university research—the remainder of the program—includes publication of seven Canadian journals of research; contributions to scientific organizations and functions, Canadian membership in international scientific unions, and the administrative costs of the program. Expenditures for these activities in 1964-65 totalled \$1,300,000. An annual *Report on University Support* describes the foundation program in detail.

In 1948 the Council instituted a program of post-doctorate fellowships, open to Canadians and to the nationals of all other countries. Originally these were tenable in the Council's own laboratories but the training and experience brought to the work by the young scientists proved so stimulating that the program has been gradually expanded. Fellowships are now tenable at Canadian universities (these are considered part of the university support program), in the laboratories of Atomic Energy of Canada Limited, and in the federal Departments of Agriculture, Forestry, Mines and Technical Surveys, and National Health and Welfare. In early 1965 more than 275 of these awards were being held, mostly in chemistry, physics and biology.

Biosciences.—This Division's program covers practical problems related to the national economy and fundamental studies in microbiology, biochemistry and biophysics as a basis for future application in agriculture, medicine and industry.

Apparatus and techniques for preparing, preserving and storing food make up a large part of the work, with particular attention in recent years to food freezing, cold storage and refrigerated transport. Recent studies have involved further tests on a process developed in the Division and now widely used in industry for the immersion freezing of poultry, quality loss in poultry meat during freezing and refrigerated storage, and an improved cooling system for frozen food trucks. The physical and chemical reactions preventing coagulation in evaporated milk during sterilization were also investigated. Micro-organisms related to the preparation and preservation of food are studied, particularly those found in salted foods and in cheese, and those that grow at low temperatures. A national culture collection of about 3,000 yeasts, bacteria and fungi is maintained.

Considerable effort is devoted, also, to questions of animal and plant physiology. Studies of the mechanisms by which mammals, birds and man adapt to cold have provided important basic information on cell, muscle and metabolic activity, and also serve to explain practical problems such as the high death rate of newly born caribou. Fundamental plant processes such as translocation are investigated, and an exhaustive study is being carried out on strains of blue-green algae believed responsible for cattle deaths. Plant fibres such as cellulose—the skeletal material of plants—and the structure and function of plant cells are also examined.

Other studies involve fermentation mechanisms and enzymology, and the structures of proteins, carbohydrates and fats. One group, among other projects, is engaged in long-term statistical studies of protein variability in wheat and wheat exports. The work has been expanded recently to include the effects of weather factors on protein content.

Radiation Biology.—The effect of radiation on living things, including people, will be the subject of research in a new National Research Council division in process of organization—the Division of Radiation Biology. The Division will be housed in a new building to be erected on NRC land on the south side of the Montreal Road in Ottawa in close proximity to the buildings housing the major applied Divisions of the Council. It is expected to be ready for occupancy in 1967 and recruiting of scientific staff has begun. A variety of types of radiation will be used, including ultra-violet light, gamma rays, X-rays, electrons and fast neutrons. The physical, chemical, functional and statistical changes brought about by irradiation of pure chemicals, biochemicals (enzymes and macromolecules), cells, tissues, micro-organisms, plants, animals and human or animal

populations will be investigated. Studies will also be made of radiations arising within biological materials as well as those originating outside. Where possible, observations will be made of the effects of radiations delivered at widely differing dose rates. The opening of the new Division will not result in any reduction in work at the Chalk River Nuclear Laboratories, but will expand the Canadian work in this field.

Applied Chemistry.—The Division of Applied Chemistry is concerned with supplying new scientific information for the development of Canada's natural resources and chemical industries. Although formerly much of the work involved the solving of immediate specific problems, a larger part of the Division's effort is now being devoted to more basic studies. This avoids conflict with industrial laboratories and consultants and, in addition to providing fundamental information, often produces practical results. For instance, a long-term investigation on the contacting of fluids and solids—an operation vital to many chemical engineering procedures—has resulted in a successful commercial operation for drying grain. The same method can be extended easily to chemical reactions and to removing liquids from other materials.

Another long-term project of considerable industrial potential has concerned the factors responsible for the stability, or the destruction, of suspensions of solids in liquids and a method was devised for easily separating almost any suspended solid from the liquid surrounding it. This work was expanded recently to include the separation of dissolved solids. It has been shown that virtually all dissolved salts can be removed from water by filtration through an appropriate medium, and tests with other materials are in progress. Then, too, the study of chemical reactions at very high temperatures—carried on over the past several years—has resulted in the successful preparation of a stable polymer that could not be produced by conventional means.

The twelve sections of the Division are: analytical chemistry, applied physical chemistry, chemical engineering, colloid chemistry, high polymer chemistry, high pressure, kinetics and catalysis, metallic corrosion and oxidation, metallurgical chemistry, physical organic chemistry, rubber, and textile chemistry. Much of the work falls under the general headings of petroleum or corrosion chemistry, in that several sections work on topics related to one of these fields.

Pure Chemistry.—The Division of Pure Chemistry is organized around a nucleus of outstanding Canadian chemists who direct about 50 young post-doctorate fellows from all over the world. The work consists of long-term fundamental investigations in physical and organic chemistry.

The work in organic chemistry includes investigation of the structures of alkaloids, studies of the infrared spectra of steroids, and the synthesis of porphyrins and of compounds labelled with isotopes. Other sections deal with chemical kinetics and photochemistry, the study of the ionization potentials of free radicals by mass spectrometry, Raman and infrared vibrational spectroscopy, organic crystal semi-conductors, and the application of high resolution proton magnetic resonance techniques to the study of hydrogen bonding and other molecular interactions. Still others study certain aspects of surface chemistry such as the thermal properties of simple solids and imperfections in the bulk and the surface of alkali halide crystals, the heats of micellization by microcalorimetry, and the thermodynamics and stress-strain relationships associated with the absorption of fluids by active carbons. There is also a small group interested in the chemistry of fats and oils.

Applied Physics.—The work in applied physics is divided between research projects likely to be of practical value and the continual development of the fundamental standards on which measurements generally are based. All the fundamental physical standards for Canada are housed and serviced in the Applied Physics Division, which has primary standards equal to any in the world in the fields of mass, length, time, electricity, temperature and radiation. The sections of the Division are: acoustics, diffraction optics, electricity, heat and solid state physics, instrumental optics, interferometry, mechanics,

photogrammetric research, radiation optics, and X-rays and nuclear radiations. Industrial problems receive considerable attention, particularly calibration work and industrial noise abatement.

Examples of specific projects under way include a study of physiological noise and its relationship with the threshold of hearing, researches directed toward improving the resolving power of optical systems, the design of a hydrogen maser offering potential as a frequency standard for defining time, measurements on various metals and ceramics aimed at elucidating the mechanism of heat transfer at high temperatures, the establishment of an international standard neutron source, and investigation and application of the very intense and very monochromatic radiation emitted by gas lasers. Several of the Division's developments are being produced commercially; among these are noise-excluding ear defenders, a revolutionary analytical plotter for making maps from aerial photographs (available in two models—one for military and the other for civilian use), six- and five-figure potentiometers, and a precision direct reading thermometer bridge.

Pure Physics.—Investigations are under way on cosmic rays and high-energy particle physics, low-temperature and solid-state physics, plasma physics, spectroscopy, theoretical physics and X-ray diffraction. The work is on fundamental problems that do not have immediate application but advance the frontiers of knowledge and supply the basis for further progress in the applied fields. Important advances in the study of cosmic rays and energetic particles have been made by means of a specially designed instrument package operating aboard the Canadian earth satellite *Alouette*. The package is sending back vital new information about the Van Allen radiation belts and about the artificial belts created by atomic explosions. (See pp. 402-404.)

The low-temperature and solid-state group studies the electrical, thermal and mechanical properties of metals and semi-conductors especially at very low temperatures. The plasma physics group, established in 1963, is making basic contributions to a field which may, in the long run, prove to be of importance in problems of controlled nuclear fusion. In the spectroscopy group, the structures of atoms and molecules are investigated by means of their microwave, visible and ultra-violet spectra, and considerable work has been done on optical masers. The theoretical physics group is at present concerned mainly with theoretical problems basic to the field of plasma physics.

The X-ray diffraction laboratory undertakes fundamental work in molecular and crystal structure and identification problems for government laboratories. X-ray diffraction methods are extremely valuable for identification purposes as they are non-destructive and require only very small amounts of material. Two of the major projects concern narcotics and vanadium minerals.

Building Research.—Technical improvements in housing are the primary concern of this Division. The research program therefore covers all aspects of housing design, building materials and components, and studies in soil, snow and ice mechanics. Regional stations engaged in research and information are maintained in Halifax, Saskatoon, Vancouver and Norman Wells.

Examples of Division projects are the behaviour of cement aggregates and lightweight concretes; the materials and techniques of masonry construction and plastering; atmospheric corrosion of metals; paint and acoustics research; and examination of the performance of walls, windows, chimneys and domestic heating systems. Other studies involve humidity in buildings, air conditioning design data, snow and wind loads on structures, the properties of various soil types including permafrost and muskeg, and the effects on buildings of ground vibrations caused by earthquakes. A unique fire research laboratory provides facilities for all types of fire resistance, fire prevention and fire fighting tests. As the Division concentrates on building problems peculiar to Canada, much of the work concerns the performance of buildings and building materials in cold weather. In this connection, double-glazed windows and lightweight metal and glass curtain walls,

used increasingly in modern buildings, have been examined. Special studies have been made to improve winter building techniques and there is a section devoted to problems of building in the Far North.

Many results of the Division's research are expressed in the National Building Code, an advisory document of building standards now used by municipalities accounting for half the total urban population of Canada. The Division also provides the secretariat and considerable technical assistance to the Advisory Committee that produces the Code.

Mechanical Engineering.—This Division works mainly in the fields of mechanics, hydrodynamics (hydraulic engineering and naval architecture) and thermodynamics. Extensive testing and specification work is undertaken for a variety of industries and for government departments. Much of the work consists of continuing projects related to land, sea and air transportation.

The mechanics activities include mathematical analysis and computation, the development of instruments and servomechanisms, and research on mechanical devices such as gears. One group, working in the field of bio-medical engineering in collaboration with surgeons, has devised a tool for end-to-end joining of blood vessels by a simple stapling operation.

In hydraulics, a number of investigations and models have been made for improving Canadian harbours. A new kind of breakwater has been developed which absorbs waves rather than reflecting them, and a breakwater utilizing this principle has been constructed at Baie Comeau. A promising scheme has also been developed for reducing silt accumulation in harbours by wave energy. The ship laboratory has continued its studies on propeller, rudder and hull design and performance.

Railway work is devoted mainly to locomotives and the riding qualities and mechanical behaviour of freight cars. Improved braking systems and cheaper fuels, lubricants and injectors have been developed. A long-term study is being made of the possible use of gas turbines in locomotives. The application of gas turbines to aircraft taking off and landing vertically is also being explored, together with the thermodynamic, aerodynamic and control problems that this type of aircraft involves. Considerable research is being done on the behaviour of lubricants at high pressures, and that of gases at extremely high temperatures.

National Aeronautical Establishment.—The National Aeronautical Establishment is designed to meet the aeronautical research needs of military and civil aviation, to co-operate with the Canadian aircraft industry, and to carry out its own research program. Its studies therefore centre around problems of aerodynamics, aircraft structures and materials, and flight mechanics.

Aerodynamics research from low speeds up to about $4\frac{1}{2}$ times the speed of sound is carried out in the Establishment's wind tunnels. Considerable attention is being given at present to low-speed problems of vertical and short take-off aircraft. Other studies include work on the aerodynamic characteristics of high-thrust propellers, on wings with submerged fans and on wings immersed in powerful slip-streams. The research on structures and materials involves investigation of aircraft accidents, the theory of structures, fatigue and fracture, flight loads statistics and aircraft hydraulics. The flight mechanics program covers research on flight safety and flying stability and control, the development of a crash position indicator for locating crashed aircraft, atmospheric physics, anti-submarine magnetometry, and the avoidance of aircraft collisions.

A growing and highly diversified program of assistance to smaller industries is developing. Most of the work relates to product development, product improvement, or testing.

Radio and Electrical Engineering.—The work of this Division includes engineering problems of interest to Canadian industry and fundamental research in electrical science. The Division co-operates with the Armed Services and associated industries in designing, producing and evaluating new equipment.

Engineering problems include long-range transmission of high-voltage direct current, corona studies, electronic aids to navigation, current and potential transformer investigations, rocket telemetry, and the development of electronic medical instruments and operating-room facilities. The Division maintains the best-equipped antenna laboratory in Canada and provides considerable assistance to Canadian industry in the development and manufacture of new antennas and radomes. Examples of recent developments by the Division are a compact transistorized marine radar for use by pleasure craft and fishing vessels, an underwater crash position indicator for locating submerged aircraft, an area display electrocardiograph showing the time variation of heart voltage between 70 points on the body, and a creative tape recorder much in demand by electronic music studios. A highly mobile counter-mortar radar designed by the Division went into commercial production in 1961.

Fundamental studies are carried out in the fields of radio astronomy, upper atmosphere research, surface physics, and solid state physics. The Division is currently developing a radio observatory in Algonquin Park which will feature a radiotelescope having a parabolic reflector 150 feet in diameter. This apparatus is expected to be fully operational in the spring of 1966. A radiotelescope 33 feet in diameter is now in operation at the site.

Atlantic Regional Laboratory.—The Atlantic Regional Laboratory is engaged in practical and fundamental studies related to the resources and industries of the Atlantic Provinces. The work follows three general lines: chemical reactions at high temperatures; structures and reactions of naturally occurring organic compounds; and the biochemistry and physiology of fungi, marine algae, mosses, lichens, ferns and higher plants. Examples of specific projects are studies of the nucleic acids of seaweeds, a botanical survey of the peat bogs of Newfoundland and Labrador, and the determination of the molecular structure of several new substances isolated from marine plants. A number of new compounds have also been isolated from land plants, and these are being investigated. The high temperature studies are aimed at providing basic information of use in steel-making and related industries.

A recent development of considerable significance is the establishment of a close working relationship with Dalhousie University at Halifax. Under the new arrangement, students acceptable to the University's Faculty of Graduate Studies may now carry out research in the Atlantic Regional Laboratory, directed by Laboratory staff members holding unpaid appointments in the Faculty. The immediate aim of the scheme is to expand the facilities for graduate studies in the Atlantic region. In the long run, the objective is to help create a strong scientific background conducive to large-scale development by industry.

Prairie Regional Laboratory.—One of the chief aims of the Prairie Regional Laboratory is to develop wider uses for crops grown on the prairies. This is achieved by determining potential uses of crops now in production and by encouraging the production of new crops to meet specific needs. Research is therefore carried out on the properties and reactions of plant components, and on the biological, chemical and engineering processes for turning them into other compounds. The development of oil-seed crops as alternatives to seed crops has received considerable attention.

For some time, the Laboratory has studied major plant constituents such as carbohydrates, protein, starch, lignin and fibres. An example of this work is the definition of the chemical structure of several polysaccharides found in cereal grains and important in baking, milling and fermentation technology. Attention is also being given to minor plant constituents—such as phenols, flavonoids and terpenes, which are known to have fungicidal and germicidal properties. A laboratory has been set up to systematically study extractives from local plants and shrubs.

The engineering and process development group is engaged in research on continuous fermentation processes, pulping processes on wood and straw fibres, and the effects of

glyceride structure of fats and oils on the quality of margarines and shortenings. Large-scale processing and pilot-plant-scale operations are carried out. There is also a group working in the field of mycology, which is concerned with the production of new chemicals, antibiotics, alkaloids and amino acids.

Section 2.—Research in the Atomic Energy Field*

Recent Developments and Prospects.—The first major fruits of Canadian atomic energy research now appear close at hand. The Hydro-Electric Power Commission of Ontario is constructing a multi-unit nuclear electric generating station at Pickering near Toronto. Each unit will generate 500 megawatts (1 megawatt = 1,000 kilowatts) and beginning in 1970 it is planned to bring into operation the first four units at yearly intervals. Estimates indicate that the power will be generated for less than 4 mill/kwh. (0.4 cents per kilowatt hour) and will be competitive with that from other available types of thermal generating station. The Quebec Hydro-Electric Commission is also entering the nuclear field with a 250-megawatt prototype nuclear generating station of advanced design. Like the earlier CANDU (Canadian Deuterium Uranium) reactors, the design employs natural uranium as the fuel and heavy water as the moderator but the heat will be carried from the fuel by boiling ordinary water instead of by heavy water at a pressure sufficient to prevent boiling. The design is distinguished by the title CANDU-BLW-250 (Canadian Deuterium Uranium-Boiling Light Water-250 megawatts).

The first nuclear power demonstration (NPD) reactor, CANDU-PHW-20 (Pressurized Heavy Water-20 megawatts) at Rolphton, Ont., gave very good service in 1964, achieving a capacity factor of 82 p.c., exceeding the target of 80 p.c. Moreover, in December 1964 and January 1965, when the target was 96 p.c., a capacity factor of 98 p.c. was achieved. Construction of the 200-megawatt station at Douglas Point on Lake Huron should be completed in 1965.

Canadian heavy water power reactors are also under construction in India and Pakistan. To meet the prospective large demand for heavy water, two production plants are being constructed in Canada by private industries and the purchase of a total of 2,500 tons of heavy water has been underwritten by the Federal Government.

Although nuclear power is expected to restore the world market for uranium, the major build-up is expected in the 1970's. The high energy yield from the fission of uranium is the key to economic nuclear power. The yield is so high that the cost of the raw uranium is a very minor component of the cost of electric power. It is about 5 p.c. of the total and may be contrasted with 50 p.c. or more paid for coal in some large conventional generating stations. The largest component in the over-all economy of nuclear power systems is reactor plant construction and a minor (10 p.c. to 15 p.c.) component is fuel fabrication.

In the past, the major atomic energy activity in Canada was uranium mining and refining for export in support of military uses. Circumstances have changed so greatly that the Government has announced a policy of no further exports for nuclear weapons but encourages export for peaceful purposes such as nuclear power.

It is also significant that since lower unit power costs result from larger stations, there is a new incentive for large utilities to export power from their systems and to interconnect centres of load by high voltage transmission even over long distances. All users of electricity also benefit from the new trend to lower rates the greater the demand.

The Canadian designs of nuclear power reactor appear capable of adapting to the largest capacities desired and of taking advantage of changes in the market value of natural uranium and of reprocessed fuel to reach even lower power costs as the scale of operations increases.

* Prepared by Dr. W. B. Lewis, Senior Vice-President (Science), Atomic Energy of Canada Limited, Chalk River, Ont.

Organizational Arrangements.—Three Federal Government organizations have the basic responsibilities for atomic energy in Canada: (1) the Atomic Energy Control Board, responsible for all regulatory matters concerning work in the nuclear field; (2) Eldorado Mining and Refining Limited, with a double function as a producer of uranium and as the Government's agent for the purchase of uranium from private mining companies; and (3) Atomic Energy of Canada Limited, concerned with nuclear research and development, the design and construction of reactors for nuclear power, and the production of radioactive isotopes and associated equipment, such as cobalt-60 Beam Therapy units for the treatment of cancer, and large installations for the sterilization of medical supplies and other uses.

The Atomic Energy Control Board does not itself conduct research but it gives substantial grants to universities to further independent studies and to provide the equipment without which the universities would find it difficult to train the nuclear research workers of tomorrow. The National Research Council also has made grants in the atomic energy field. In 1964-65 the total of these grants was \$2,450,000.

Eldorado operates research and development laboratories in Ottawa and uses them to support its uranium mining and processing at Beaverlodge in northern Saskatchewan and its refining plant at Port Hope, Ont. Eldorado co-operates with the Department of Mines and Technical Surveys, which carries out background research on the production and use of uranium.

Atomic Energy of Canada Limited (AECL) has an eleven-man Board of Directors, including individuals from private industry, public and private power companies and the universities. The company's major plant, the Chalk River Nuclear Laboratories, is near Chalk River, Ont., and a second plant, the Whiteshell Nuclear Research Establishment, is near Pinawa in Manitoba. The company's Head Office and AECL Commercial Products are in Ottawa. AECL Power Projects in Toronto directs the engineering of power reactors and nuclear generating stations and operates as consulting nuclear engineers. The design and construction of NPD, the demonstration plant, was carried out by collaboration between AECL, the Canadian General Electric Company Limited and Ontario Hydro. Power Projects, with the assistance of Ontario Hydro, designed and constructed the Douglas Point station. By agreement, Ontario Hydro will purchase the plant when it is in satisfactory operation. The large units of the Pickering station are being built by Ontario Hydro using Power Projects as consulting nuclear engineers. An Advisory Committee on Atomic Power Development keeps all other utilities fully informed of the progress being made. This Committee, which was set up by the Federal Government in 1954, meets periodically to assess the economic prospects of nuclear power throughout the country.

Because of the great pace of technological development in nuclear power throughout the world, AECL devotes a major effort to collaboration with many organizations. These include industrial firms and the scientific and engineering departments of universities in Canada and, through foreign government agencies and several international organizations, many technical groups in other countries. For example, the Canadian General Electric Company has designed and constructed WR-1, an organic-cooled experimental reactor, for the Whiteshell Nuclear Research Establishment, on a fixed price negotiated contract. The Canadian General Electric and Canadian Westinghouse companies are AECL's chief contractors for fuel element fabrication, and other work related to Canada's nuclear power program is carried out in collaboration with Shawinigan Engineering, Orenda Engines Division of Hawker Siddeley Canada Limited, Dilworth, Secord, Meagher and Associates, Atlas Steel Limited and Montreal Engineering Company Limited. In general, AECL's policy is to stimulate the interest of private industry in the development of nuclear power so that these firms can take over construction of power plants when the time arrives, leaving AECL free for fundamental studies and developing new reactor concepts. For some years AECL expects to continue a consulting engineering role in the design of nuclear generating stations. AECL also lends general support to the nuclear and related studies of Canadian universities and lets contracts to the universities on specific problems.

To support their activities in this field, both industry and universities need ready access to information. This was one reason why industry set up the Canadian Nuclear Association, a body that has held a highly successful series of annual conferences at which both progress and the prospects for the future are reviewed. A commercially published magazine, *Canadian Nuclear Technology*, maintains the flow of general information and opinion. Detailed technical information is available principally from the library of the Chalk River Nuclear Laboratories, which lends about 500 items a month from its comprehensive collection of the world's nuclear literature. Information is also distributed from extensive depository collections at the libraries of the University of British Columbia, McMaster University and the National Research Council and from seven smaller collections located across Canada.

In the international field, close ties are kept with the United States Atomic Energy Commission and the United Kingdom Atomic Energy Authority, both of which have representatives permanently at Chalk River. There is an agreement with the United States for co-operative work on heavy-water-moderated reactors; it provides for the free exchange of all technical data in this field and a commitment by the United States to spend \$1,000,000 yearly on research and development related to reactors of Canadian design. Collaboration has also been established with the International Atomic Energy Agency, the Organization for Economic Co-operation and Development, and Euratom, as well as with Australia, West Germany, India, Italy, Japan, Pakistan, Spain, Sweden, Switzerland, U.S.S.R. and, less formally, with Denmark, France and Norway. In India, a major experimental reactor—the Canada-India Reactor—similar to NRX at Chalk River was constructed and was formally inaugurated in January 1961.

A 200-megawatt plant similar to that at Douglas Point is being constructed in India on a co-operative basis, known as the Rajasthan Atomic Power Project (RAPP). India has announced plans to install a second similar unit on the same site and two more units on another site near Madras. Pakistan has entered into an agreement to purchase from the Canadian General Electric Company a 130-megawatt station for the Karachi area.

Research and Research Facilities.—At the Chalk River Nuclear Laboratories, basic and applied research is carried on by about 200 professional scientists and engineers supported by 300 technicians devoted to research in nuclear physics, nuclear chemistry, radiobiology, reactor physics, radiation chemistry, environmental radioactivity, physics of solids and liquids, and other subjects, using as their primary facilities the two major reactors, NRX and NRU, the auxiliary reactors, ZEEP, PTR and ZED-2, the tandem Van de Graaff accelerator and analytical facilities such as a precision beta-ray spectrometer, mass spectrometers, electron microscopes, multi-channel pulse analysers, automatic recorders, and analogue and digital electronic computers.

Basic research is carried on in many fields, especially that of the structure of atomic nuclei and of the interactions of neutrons, not only with individual nuclei but also with liquids and crystalline solids, particularly those involving energy transfer. For nuclear structure studies, the tandem Van de Graaff has made pioneer work possible by providing multiply-charged ions of precisely known energy and direction. It has proved possible to produce nuclei in specific energy states by different routes and to identify and analyse the states, thereby deducing the spin and other characteristics and discovering, for example, three correlated series of rotational states in the nucleus neon-20. Not only is this important to a basic understanding of nuclear structure but it also finds application in unravelling the complex of nuclear reactions responsible for the genesis of nuclei in the interior of stars.

Studies of neutron interactions with matter are made possible by the intense beams of neutrons available from the NRU reactor. By monitoring the neutrons in cosmic radiation, it has been possible to find correlations with the occurrence of solar flares and contribute to the recent advances of knowledge of phenomena in interplanetary space. Isotope techniques have brought about revisions in the basic theory of chemical reactions induced by radiation. This basic research may find a useful application in the technology of using an organic liquid as coolant in nuclear power reactors.

The research facilities of the NRX and NRU reactors have continued to attract individual scientists as well as teams from universities and from other countries. The international study on the scattering and slowing of neutrons by moderators and other materials of interest at high and low temperatures is drawing successfully to a close. More facilities for studying radiation damage under closely controlled conditions are coming into use. These include devices for measuring creep of metals under stress and fast neutron bombardment at controlled temperatures.

The first major installation at the Whiteshell Nuclear Research Establishment (WNRE) is the organic liquid-cooled, heavy-water-moderated experimental reactor WR-1, to be commissioned in 1965. Under a special agreement the facilities of this reactor will be shared with the USAEC and their contractors. The facilities are specially suited for development work toward large reactors of a similar type that have been selected by the USAEC as promising for their water desalination program. The facilities of WR-1 are quite extensive and can be applied to development work also with other coolants such as boiling water and superheated steam. Laboratory facilities at WNRE are specially suited to studies of the effects of radiation and a wide program from molecular biology to radiation chemistry and reactor engineering is envisaged.

Nuclear Power Development.—Much of the success of the CANDU series of reactors is attributable to the engineered design of the fuel tested in many experimental irradiations under conditions that are more exacting than normal service. The fuel is uranium dioxide specially prepared from natural uranium entirely in Canada. Strings of pellets of sintered oxide are charged into thin-walled zirconium alloy tubes. The tubes deform slightly in service in a determined manner that has proved satisfactory. The migration of the fission product atoms, especially the gases, has been extensively studied and satisfactory operating conditions established for the full energy yield of 9,000 megawatt-days per ton of uranium and more. This energy yield is so great that there is no need to make provision for processing the spent fuel and the prospective fuelling cost is less than one mill (0.1 cent) per kilowatt hour of electricity. This cost may be compared with about three mills from coal at \$8 per ton. The low fuelling cost is most important because Canada has access to such an abundance of coal, oil and natural gas that the competitive cost level for electric power is lower than in many other countries.

The low fuelling cost derives as much from the details of the design proposed as from the general type of reactor chosen. Some of the important features seem worthy of mention. At Douglas Point the first full-scale plant will generate 220 megawatts with a steam-cycle efficiency of 33.3 p.c., so that the reactor has to supply 660 thermal megawatts to the steam-raising plant. The reactor is essentially a tank of heavy water, 20 feet in diameter and 16.5 feet long, lying horizontally. It is penetrated by 306 fuel channels parallel to the axis on a nine-inch-square lattice. Each channel is a zirconium-alloy pressure tube of 3.25 in. inside diameter and about 0.16 in. thick. The fuel consists of bundles of 19 rods, 0.6 in. in diameter and 19.5 in. long, made of dense uranium dioxide in thin zirconium-alloy tubes. Heat is taken from the fuel directly by heavy water that passes at 560°F. to the steam boiler, where normal water is raised to saturated steam at 483°F. and 38 atmospheres. These details show that the design represents a considerable advance over that originally conceived in 1956, and the improvement bears promise that continued progress will lead to costs well below the economic target. As examples of the advance, it may be noted that, for the same electric power output, the total heat production of the reactor has been brought down from 790 to 700 megawatts, the efficiency of the steam cycle itself has risen from 27.9 p.c. to 33.3 p.c., and the length of fuel rod has been reduced from 86 to 30 kilometers. The prospective fuelling cost has dropped from 1.85 mill/kwh. to 1.0 mill/kwh. On the other hand, no over-all reduction has been achieved in the capital cost estimates which remain in the range of \$300 to \$400 per electrical kilowatt for the whole plant. However, a reduction is expected now that manufacturing experience has been gained which can be used in future construction. Even greater reductions in unit power cost will result at Pickering from the increase in the capacity of the reactor to 500 megawatts of electricity and the incorporation of several such units in a large generating station.

CANADIAN NUCLEAR REACTORS IN OPERATION, UNDER CONSTRUCTION OR APPROVED FOR CONSTRUCTION

Name	Location	Date of Start-up	Power	Fuel	Moderator	Coolant	Use
Zero Energy Experimental Pile (ZEEP).....	Chalk River, Ont.	1945	100 w.	Natural uranium metal or oxide	Heavy water	—	Lattice experiments
National Research Experimental (NREX)....	Chalk River, Ont.	1947	42,000 kw.	Natural uranium oxide and enriched uranium alloy	Heavy water	Ordinary water	Research and isotope production
National Research Universal (NRU).....	Chalk River, Ont.	1957	70,000 kw.	Enriched uranium alloy	Heavy water	Heavy water	Research and isotope production
Pool Test Reactor (PTR).....	Chalk River, Ont.	1957	100 w.	Enriched uranium alloy	Ordinary water	Ordinary water	Reactivity and absorption measurements
Toronto University Subcritical Reactor.....	Toronto, Ont.	1958	—	Natural uranium metal	Heavy water	—	Research and teaching
McMaster Nuclear Reactor (MNR).....	Hamilton, Ont.	1959	1,000 kw.	Enriched uranium metal	Ordinary water	Ordinary water	Research
ZED-2.....	Chalk River, Ont.	1960	100 w.	Natural uranium metal oxide or carbide	Heavy water	—	Lattice experiments
Nuclear Power Demonstration (NPD).....	Rolphton, Ont.	1962	20,000 kw. (electricity)	Natural uranium oxide	Heavy water	Heavy water	Power demonstration
Whiteshell Reactor No. 1 (WR-1).....	Pinawa, Man.	1965	40,000 kw. at first	Enriched uranium oxide	Heavy water	Organic liquid	Research and engineering tests
CANDU-P1HW-200 ²	Douglas Point, Ont.	1966	200,000 kw. (electricity)	Natural uranium oxide	Heavy water	Heavy water	Power
Karachi Nuclear Power Plant (KANUPP)...	Karachi, Pakistan	1970	137,000 kw. (electricity)	Natural uranium oxide	Heavy water	Heavy water	Power
CANDU-P1HW-500 (several reactors) ²	Pickering, Ont.	1970	500,000 kw. (electricity) each	Natural uranium oxide	Heavy water	Heavy water	Power

¹ NREX is essentially duplicated in the Canada-India Reactor, near Bombay, India, which started up in 1960.

² CANDU-PHW stands for "Canadian Deuterium Uranium-Pressurized Heavy Water".

³ The CANDU-PHW-200 design is also employed in the Rajasthan Atomic Power Plant in India, scheduled to start up in 1969.

An evaluation was presented at the third United Nations Conference on the Peaceful Uses of Atomic Energy at Geneva in September 1964 of cost estimates of several preliminary designs of large power reactors using heavy water as moderator. These designs represented types for which development work was well advanced. The differences lie in the choice of heat transfer fluid or 'coolant' and the steam cycle. Basically there are three coolants— heavy water, ordinary or light water, and an organic liquid. The heavy water could be under pressure to prevent boiling or to allow some boiling. Light water would have to boil or be in the form of 'fog' or 'wet steam'. The organic liquid must not boil. All types have excellent economic promise and it was decided to develop the boiling light water type chiefly for two reasons. By taking the steam direct to the turbine a boiler or heat-exchanger is eliminated and the efficiency is raised. The second advantage is a relaxation of the strictness of control of leaks needed with hot heavy water, both because of its cost and because of the toxicity of the tritium it contains. Some development of the organic liquid system continues under a new agreement with the United States in support of its program to develop such a system for water desalination as well as for power.

Most of this development work centres on establishing the properties of materials for the arduous environment of high temperatures, and radiation effects affecting the solids and the fluids. In ordinary engineering, the three parameters of stress, temperature and time lead to complex analyses, especially when corrosion and atomic diffusion are active. In reactors, irradiation is a fourth and major parameter. Thus, materials development still calls for a major scientific and engineering program of studies.

Section 3.—Space Research in Canada*

The interests of Canadian scientists engaged in space research continue to be mainly in the field of aeronomy with particular, though not exclusive, emphasis on the high-latitude atmospheric and magnetospheric phenomena which are now generally believed to be related to the various disturbances on the sun. Canada, with its large land mass extending on both sides of the auroral zone, is ideally located for studies of medium- and high-latitude atmospheric phenomena and Canadian scientists have long been active in this exciting field. While many of the older programs of ground-based observations are still of great importance and are being carried out, the new measurements from satellites and rockets are making a significant contribution to knowledge of solar-terrestrial relations and in the next few years the importance of these studies using the new space techniques will increase.

The satellite program of the Defence Research Board, carried on in collaboration with the United States National Aeronautics and Space Administration (NASA), continues to form a major part of the Canadian space activities. The Canadian satellite 1962 Beta Alpha (*Alouette*), which was launched on Sept. 29, 1962, is still in orbit. Its instruments are functioning satisfactorily and there is every indication that it will continue to operate and send back scientific data for many months to come. The satellite carries a number of experiments but its main objective is the sounding of the ionosphere from above. The ionosphere is the diffuse layer of highly conducting gas lying between heights of about 60 to 300 miles. It reflects radio waves over a wide band of frequencies and is of great practical importance for communications. The underside of the ionosphere has been studied for many years by the technique of sending a short pulse of radio waves up from the ground and examining this pulse after it had been reflected back from the ionized regions. The satellite *Alouette*, however, was the first spacecraft to provide scientists with a continuous sounding of the ionosphere from above.

Other instruments carried by the satellite enable studies to be made of radio waves from outer space and very low frequency electromagnetic waves whose propagation is influenced by the earth's magnetic field. There are also a number of detectors to study cosmic rays, energetic particles in the Van Allen radiation belts and the artificial radiation

* Prepared (June 1965) by C. Collins, Division of Pure Physics, National Research Council, Ottawa.

introduced by high-altitude nuclear explosions. Data are transmitted from the satellite to the ground stations in several countries around the world and the magnetic tape records are sent to Ottawa for analysis. Scientific results to date have been most gratifying and the satellite measurements have added greatly to knowledge of the earth's upper atmosphere.

The over-all design and construction of the spacecraft were carried out by the Defence Research Telecommunications Establishment. Some components were made by Canadian industry and the cosmic ray instruments were the responsibility of the National Research Council. The cost of the launching vehicle, the actual launching and much of the data recovery were undertaken by the NASA as part of its international co-operative program. This joint Canadian-United States program is continuing. The launching of *Alouette B*, successor to the present satellite, is scheduled for late 1965. *Alouette B* is the first of four satellites to be built in Canada for the International Satellites for Ionospheric Studies (ISIS) series. These vehicles, to be launched at intervals during the next five years, will carry more sophisticated instruments and orbit at greater heights than *Alouette I*.

The rocket-launching facility at Fort Churchill, Man., located almost under the belt of maximum auroral activity, has been a centre of activity during the past year. A total of 103 rockets and 41 high-altitude balloons were launched in 1964. Four launchers are in use and a variety of rockets, including *Arcas*, *Nike*, *Cajun*, *Nike Apache*, *Astrobee*, *Aerobee*, *Argo D-4* (*Javelin*) and the *Black Brant* series. The range is operated by the United States Air Force for joint United States and Canadian scientific purposes. Early transfer of its operation to the National Research Council of Canada is planned.

Rockets have a special role in the space programs because there is an important region of the upper atmosphere that is too low for satellite orbits and too high to be reached by balloons or aircraft. This is the region between heights of about 25 and 200 miles. Here are found the absorbing layers in the lower ionosphere which cause radio blackouts and here are detected the complex atmospheric processes which produce the visible aurora. Because the axis of the earth's magnetic field is tilted, the auroral zone sweeps down across Canada, and Churchill lies almost in the middle of this zone. This region of the atmosphere is therefore of great interest and importance to Canadian scientists. For many years investigations were limited to ground-based radio and optical measurements but now rockets are being used to carry instruments right into the aurora. These measurements, *in situ*, of electron density, temperature and charged particles will ultimately lead to a proper understanding of the aurora and high-latitude disturbances.

Many of the rockets fired at Churchill are of Canadian design and development. These are the *Black Brant* rockets which were pioneered by the Defence Research Board and are now produced commercially in Winnipeg. The first in the series, the *Black Brant I*, was an experimental vehicle and is now obsolete. *Black Brant II* is a 17-inch diameter vehicle capable of carrying 150 lb. of payload to over 100 miles. *Black Brant III* is a smaller rocket, 10 inches in diameter which will lift 40 lb. to about 100 miles. *Black Brant IV* is a combination of *II* and *III* and will go to a height of about 600 miles. *Black Brant V* is an optimum design of the *II*. Most of the flights have been made with the *II*'s but the *III*'s and *IV*'s have been successfully flown and will be used to carry scientific instruments in the immediate future.

Along with the increased activity in Canadian space programs there has been a general broadening of interests. The Meteorological Branch of the Department of Transport (DOT) Meteorological Satellite Data Laboratory is conducting a program to produce applications of satellite observations to the problems of meteorology and ice reconnaissance. In the field of communications satellites, the DOT has a joint program with NASA in which Canada participates in the testing of such spacecraft as *Telstar*, *Relay* and *Syncom* and a new experimental ground station will provide information for the development and use of communication satellite systems.

Canadian universities have continued to be very active in the field of space research. Nine university groups have programs involving the instrumenting of rockets, balloons

or satellites for upper atmospheric studies. The McGill University program of gun-launched vehicles in the Barbados known as HARP (High Altitude Research Program) has been carried on with considerable success. About 90 launchings were made in 1964. Improvements have been made to both the gun and the vehicles and successful measurements have been made of wind shears and atmospheric constituents in the 100-km. region. This program is carried on in collaboration with the U.S. Army.

Much of the foregoing work is shared with Canadian industry. Civilian contractors are producing instruments and space vehicles for both Canadian and foreign experimenters. In some programs, such as the *Alouette* satellite and the development of *Black Brant* rockets, industry is playing a major role. Other work of great importance for the space programs, such as fundamental research on materials and in plasma physics, is also being carried on in industrial laboratories.

Section 4.—Research in Geophysics and Astronomy

Research in the fields of geophysics and astronomy is dealt with briefly in this Section. A more extended treatment of geophysics, appearing in the 1965 Year Book at pp. 45-47, is brought up to date by the following item which shows the progress made in 1964-65. A special article on Astronomy in Canada, appearing in the 1965 edition at pp. 47-55, indicates in some detail the recent advances made in astronomical research and educational facilities; the current item on the subject mentions the highlights only.

Geophysics.*—Geophysics is the study of the earth, including the oceans and atmospheres, by the methods of physics. It embraces a number of fields, each a major science in itself, such as geodesy, seismology, terrestrial magnetism, meteorology, oceanography and hydrology. Work in geophysics in Canada is carried on by a number of Federal Government departments, certain provincial governments, nearly all universities and by companies engaged in geophysical prospecting for oil or minerals.

The year 1965 was marked by further progress in several fields, partly because of Canadian commitments in a number of international programs. In seismology, the number of earthquake recording stations, operated by either the Dominion Observatory or universities, increased to 25. As part of the International Upper Mantle Project, several large-scale studies of the crust were carried out, using waves from artificial explosions. A major investigation of the Hudson Bay area by government and university groups was conducted during the summer of 1965 with the support of the special oceanographic ship *Hudson*.

Measurements of both the gravitational and magnetic fields of the earth were extended, over land areas by the Dominion Observatory and the Geological Survey, and over the oceans by the Bedford Institute of Oceanography. These measurements provide information that is extremely useful in the study of concealed geological structures. Studies of the northern lights, or aurora borealis, and related phenomena involving electromagnetic effects in the upper atmosphere received particular attention from both university and government groups as part of Canada's participation in the International Quiet Sun Year. This study was undertaken at a time of minimum sunspot activity (1964-65) to indicate the contrast with conditions during the International Geophysical Year (1957-58), which was at a time of maximum sunspot activity.

Resources of fresh water continued to be a cause of concern throughout the world, and Canada's hydrologists completed plans to participate in the International Hydrological Decade, a ten-year study of the world's freshwater resources. As these resources include the water contained in glacial ice, the mapping of existing glaciers in the country was extended considerably during the field season.

Meteorology includes not only the routine forecasting carried out principally by the Meteorological Branch of the Department of Transport (see p. 65) but also research in special problems conducted by the Branch and by a growing number of university groups.

* Prepared by Dr. G. D. Garland, Geophysics Laboratory, University of Toronto, Toronto.

A problem that received particular attention was that of hail formation, since hail damage to crops can be extremely serious in certain areas and there is considerable interest in the possibility of forecasting or even preventing it.

Geophysical exploration for oil, chiefly by means of seismic waves from small explosions, was carried on by several companies in Western Canada and also offshore in the Pacific and in the Atlantic Grand Banks area. Prospecting for minerals by magnetic or electro-magnetic measurements was intensified as a result of the demand for copper. The recent large copper discovery near Timmins, Ont., was made on the basis of geophysical surveys.

Astronomy.*—Modern astronomical research is based on observations secured with complex optical and radio telescopes. The major centres of this research in Canada have developed within the Federal Government and at a few universities. Research in optical astronomy began early in this century at the Dominion Observatory, Ottawa, and this was followed by the construction of larger telescopes at the Dominion Astrophysical Observatory, Victoria, and the David Dunlap Observatory of the University of Toronto. Smaller observatories have also been built at the University of Western Ontario and at Queen's University. A new observatory, commemorating the visit of Her Majesty Queen Elizabeth II to Canada in October 1964, is to be constructed on Mount Kobau in southern British Columbia. It will be equipped with a large reflecting telescope 150 inches in diameter and will be a national observatory available to astronomers throughout the country.

Canada first entered the field of radio astronomy, the study of radio emissions from beyond the earth, in 1946 when the National Research Council began its study of solar radio waves. Radio astronomy has expanded rapidly and there are now radio telescopes operated by the University of Toronto, by Queen's University, by the Dominion Observatory near Penticton, B.C., and by the National Research Council at a large observatory in Algonquin Park, Ont., where a large steerable radio telescope 150 feet in diameter will commence observations in 1966. An 84-foot parabolic telescope and two large arrays of antennas are in operation at the Penticton site.

Canadian astronomers are engaged in various specialized fields of research. In the study of the solar system the sun has been studied for many years by both optical and radio techniques with emphasis on solar flares and other phenomena which affect the environment of the earth. Solar eclipses in which the path of totality crosses Canada have been observed whenever possible. Only minor attention has been devoted to study of the planets but major efforts have gone into meteor research. Both photographic and radar equipment are employed in this work and the study of meteor spectra and radar echoes from meteor trails have been particular specialties. There is an increasing interest in the related field of meteorites and Canada has figured prominently in the study and interpretation of old craters caused by the impact of huge meteorites.

Stellar astronomy has been the largest single field of Canadian astronomy. One aspect of this is the accurate determination of the positions and motions of stars in the sky. The Dominion Observatory is continuing an active program of positional astronomy aided by new and highly specialized instruments. The large telescopes at Victoria and Toronto have been used primarily for spectroscopy, one of the major tools of astrophysics. Several programs have been completed in which large groups of stars have been studied individually to determine their true luminosities and motions in the line of sight. The results have then been used for research on the structure of the earth's Milky Way galaxy. From spectroscopic studies of certain types of close double stars, information on such properties as the size, mass, density and temperature of individual stars is secured. Stars whose light varies in intensity have been studied by photography for many clusters of stars and are also studied by photoelectric devices mounted on the telescopes at Victoria, Toronto and the University of Western Ontario.

* Prepared by Dr. Ian Halliday of the Dominion Observatory, Ottawa.

Although the optical telescopes in Canada have not been used for extragalactic research, many of the stronger sources in the field of radio astronomy are now known to be exceedingly distant objects far beyond the stars of the earth's galaxy. Canadian radio telescopes are, and will continue to be, engaged in the observation of such sources. At the same time they are also involved in the study of clouds of gas between the stars of the earth's system and this work complements the knowledge gained from spectroscopic research with optical telescopes. The large size of the Queen Elizabeth II telescope planned for Mount Kobau will guarantee Canadian astronomers an opportunity to become active in all fields of extragalactic research and will provide essentially complete facilities for astronomical research in Canada.

Section 5.—Other Scientific and Industrial Research Facilities

This Section outlines research facilities and activities other than those covered in Sections 1 to 4—various federal departments and agencies, provincial organizations, universities and industry. The first three types of institutions—federal, provincial and university—have, of course, an interest in problems of industrial significance. As already stated, although many Canadian industries now possess research facilities—some of them quite extensive—much of the industrial research to date has been done under government auspices.

Subsection 1.—Federal Organizations

Research activities in the various Federal Government departments and agencies have expanded rapidly, at first because of the need for speeding up the production of raw materials, which were for many years the basis of Canada's export trade, and later because of increasing interest in the processing of raw materials, the necessity of meeting the needs of national defence and the developing consideration for many human and resource requirements. In addition to the activities of the National Research Council, Atomic Energy of Canada Limited and the Department of Mines and Technical Surveys dealt with in Sections 1 to 4, federal agencies involved in research include the Departments of Agriculture, Forestry, Fisheries, other Branches of the Mines and Technical Surveys, National Defence, National Health and Welfare, and Northern Affairs and National Resources.

The scientific work of the Department of Agriculture is described in Chapter XI of this volume, the investigations conducted by the Board of Grain Commissioners in Chapter XXI, the specialized work in scientific forest research in Chapter XII, scientific services concerned with Canada's mineral resources conducted by the Department of Mines and Technical Surveys in Chapters I and XIII, investigational work of the Department of Fisheries in Chapter XV, research of the Canadian Wildlife Service of the Department of Northern Affairs and National Resources in Chapter I, medical and other research conducted by the Department of National Health and Welfare and other agencies in Chapter VI, and the work of the Defence Research Board in Chapter XXVI.

Late in 1963 the Department of Northern Affairs and National Resources completed the first permanent scientific research laboratory to be built north of the Arctic Circle. This laboratory, at Inuvik, N.W.T., has year-round facilities specially designed for Arctic research and serves as a base for extensive field studies in the Western Arctic. It accommodates a permanent staff of eight scientists from many disciplines and up to 16 visiting researchers. The operation of the laboratory is in charge of a Manager working under the direction of the Northern Co-ordination and Research Centre of the Department.

Subsection 2.—Provincial Organizations

Five of Canada's provincial governments (Nova Scotia, New Brunswick, Manitoba, Saskatchewan and Alberta) have established research councils or foundations and two others (Ontario and British Columbia) have assisted financially in the setting up of such

organizations. Quebec has also announced its intention of establishing a provincial research council and industrial research centre in the near future. Most provincial governments have university laboratories to consult, particularly about local industrial and agricultural problems, and many individual departments have facilities for research in their particular fields of endeavour or assist research through the provision of financial aid to students working in those and other scientific fields. Agriculture is particularly well covered because of its importance as an export industry but the provinces are also intensely interested in their other natural resources. Their efforts in the fields of agriculture, forestry, mining and fisheries are outlined in the Chapters dealing with those subjects (see Index).

Nova Scotia Research Foundation.—This body was created by the Government of Nova Scotia in 1946 to give its people scientific and technical assistance in finding new and better ways to utilize the resources of the forest, the sea, the farm, the mine and the process industries. To this end it seeks to correlate and further scientific work on local problems and available resources. At present in temporary quarters, the Foundation is planning a new laboratory building to be financed by an Atlantic Development Board grant. It assists universities, colleges, research groups, industries, provincial and federal departments and individuals by loans of equipment, grants, scholarships, laboratory and summer assistants, library, cartographic, photogrammetric and translation services, and technical information. It has supported or collaborated in work on breeding new varieties of plants and root nodule bacteria; on antibiotics, poultry, blueberry culture, coal-burning equipment, the constitution and gasification of coal, the non-destructive testing of mine equipment, the utilization of anhydrite, diatomite, fish waste, gypsum, seaweed, slag, slab wood and fertilizing materials. It has conducted geophysical, geological, air pollution and seaweed surveys as well as forest aphid, forest ecology and genetic studies and has assisted studies on the nutrient cycles of lakes, on X-ray crystallography, on pressures in underground strata and on crop damage by predators. Its Geophysical Division is equipped to undertake all types of magnetometric, gravimetric, resistivity, seismic and electromagnetic explorations. The Technical Services Division provides free technical information to industries in the province and offers them research and development services and facilities in the fields of physics, chemistry, engineering and operations research. A *Research Foundation Bulletin* is issued from time to time to keep industry advised of Foundation activities and also of important discoveries in science and technology. The *Research Record* provides a descriptive account of past research projects.

The New Brunswick Research and Productivity Council.—The aims of this Council, established by an Act of Legislature in 1962, are *inter alia* to "promote, stimulate and expedite continuing improvements in productive efficiency and expansion in the various sectors of the New Brunswick economy". The Council receives an operating grant from the provincial government and support in specific areas from federal sources. It undertakes contract research on a repayment basis from industry. Its laboratories are at present 10,000 sq. feet on a seven-acre site in Fredericton, and plans are being drawn up to extend this to a total of 50,000 sq. feet with the support of a capital grant of \$1,250,000 from the Atlantic Development Board. Staff at the beginning of 1965 numbered 20 and is expected to increase to 35 by the beginning of 1966. The work of the Council is centred on providing industry with industrial engineering, 'trouble-shooting' and technical information services, training courses in management techniques and upon applied research in the fields of mechanical and chemical engineering, food technology, microbiology and mineral technology. Policies are established by 13 Council members representative of provincial industry, labour, government and education with the help of specialist advisory committees. The Executive Director has supervision over and direction of the work of the staff and has charge of all matters relating to the administration of the affairs of the Council. The Chairman of the Council reports annually to the Premier of the province.

Manitoba Research Council.—The Manitoba Research Council consists of seven members representing natural-resource-based industry, manufacturing, the University of Manitoba and labour. The Council is financed by provincial government appropriations, although fees and service charges may be levied for its services. The objectives of the Council are to promote or carry on, or cause to be promoted or carried on, research and scientific inquiries respecting agriculture, other natural resources, industry or other segments of the economy of the province and to help to secure for Manitoba the benefits of research and scientific inquiries carried on elsewhere. The preponderance of small industrial establishments in Manitoba and their need for assistance in developing a more scientifically based production capability to improve their competitive position in domestic and world markets was the major technical reason for the establishment of the provincial Research Council.

The Council is at present analysing the needs for and supply of facilities for research in the province. Several specific projects have been undertaken for which existing research facilities within and outside the province and outside Canada have been utilized. The Council maintains an office and staff in the Provincial Government Administration Building (Norquay Building) in Winnipeg.

Saskatchewan Research Council.—This Council was set up in 1947 under an Act of the Government of Saskatchewan. The Council carries out research in the physical sciences, both pure and applied, with the aim of improving the provincial economy. It is therefore particularly concerned with the commercial exploitation of provincial resources and the scientific aspects of business. At first the Council had no scientific personnel and laboratory facilities of its own. Its research program was carried on at the University of Saskatchewan and was promoted by means of grants to members of the staff and scholarships to graduate students. The 1947 Act was amended in 1954 to empower the Council to acquire property, employ staff and conduct its own financial affairs. Laboratory buildings were erected on the university campus in 1957 and were extended in 1963. In the present program of research the emphasis is on water and mineral resources, fields of agriculture not covered by other organizations, and technical assistance to industry. A large part of the program is carried out by the permanent staff, now numbering about 60, but some of the Council's research is still promoted by grants to university staff. The members of the controlling body, the Council proper, are appointed by the Lieutenant-Governor in Council and consist of representatives of the government, industry and the university.

Research Council of Alberta.—The Province of Alberta set up a scientific and industrial Research Council in co-operation with the University of Alberta in 1921, the promotion of mineral development within the province being the chief purpose leading to its establishment. The Council operates under an Act somewhat similar to that which set up the National Research Council and is principally financed by provincial government appropriations. The present program is directed to the application of basic and applied science toward the development of the natural resources of the province and toward the establishment of new industrial operations within the province. Investigations in the Council laboratories and pilot plant are organized into two branches—the Earth Sciences Branch which includes all work on groundwater geology, geological surveys and research, mineral beneficiation and soils, and the Fuels Branch which includes work on coal, petroleum, natural gas, chemical process and product development, and gasoline and oil testing. There are, in addition, project groups dealing with industrial engineering services, highway research, a co-operative program on cloud physics with reference to the hail problem, and a number of special projects.

The operations of the organization are controlled by a Council of ten individuals representative of the government, the university and industry. The various research projects are reviewed by advisory committees composed of specialists in each field, drawn from industry, the university and the provincial government.

The main Council laboratories are located on the University of Alberta campus in Edmonton. A new pilot plant facility is under construction in the Clover Bar area east of Edmonton.

Ontario Research Foundation.*—The Ontario Research Foundation, established in 1928, operates as an independent corporation, deriving its powers from a special Act of the Legislature and governed by a Board of Governors appointed by the Lieutenant-Governor in Council of Ontario. The organization was financed initially by an endowment fund composed of subscriptions from commercial and industrial corporations, from private individuals, and a grant from the provincial government. However, most of its current income is derived from contract research undertaken for industry, although income is also obtained from the various government departments for research and other work undertaken on a contract basis. The Foundation is concerned primarily with the development of industry and the development of Ontario's natural resources through the application of scientific research. However, Foundation activities are not confined to the province; research contracts are routinely handled for any organization, without reference to location. Being primarily an industrial research institution, the Foundation's main areas of scientific endeavour are chemistry, physics, metallurgy, biochemistry, textiles and engineering. Other Foundation departments, such as parasitology and physiography, are engaged particularly in studies related to Ontario's natural resources. A field engineering and technical information service is provided free to industry, sponsored by the Ontario Department of Economics and Development and by the National Research Council.

British Columbia Research Council.*—This Council is a non-profit, industrial research institute with offices and laboratories on the campus of the University of British Columbia. Its function is to enable even the smallest firms to improve their competitive position in Canadian and world markets by the use of the most up-to-date scientific knowledge. The Council provides a free technical information service in collaboration with the National Research Council, carries out contract research for clients on a confidential basis and initiates "in house" research programs designed to promote and utilize the resources of the province. The Council is active in the areas of applied biology, chemistry, engineering, physics, operations research, industrial market studies and economic feasibility studies.

Subsection 3.—University Research

Research conducted in the universities falls into three broad categories: research projects carried out by faculty members in addition to their teaching duties; investigations by students, under the guidance of professors, to meet the requirements for advanced degrees; and larger projects or programs undertaken co-operatively on a faculty or inter-faculty basis in large laboratories or specialized institutes connected with the university.

Faculty Resources.—Research is generally considered to be an important part of the function of the university teacher and many of the more than 10,000 full-time staff members of Canadian universities can be assumed to be engaged in such activity. With most staff members, only that part of the time that can be spared from teaching duties can be devoted to research during the teaching session but, for those not teaching summer classes, the summer months offer an opportunity for relatively uninterrupted research activity. The projects undertaken are so diverse in character as to defy brief classification here but information concerning them is available in the annual reports of the presidents of the individual universities. For the humanities only, a more convenient source of information about the scope and diversity of Canadian scholarship is the "Bibliography of Scholarly Publications" included in *The Humanities in Canada*, a report prepared by F. E. L. Priestley for the Humanities Research Council of Canada and published by the University of Toronto Press in 1964.

* See also p. 389.

Student Resources.—Prior to World War II, higher education in Canada concentrated almost exclusively on the production of trained professionals to serve the community as doctors, lawyers, engineers, etc., and only three Canadian universities had established graduate schools. In 1963-64, however, 34 universities and colleges were offering work at the graduate level, 19 of them with doctorate programs. The writing of a research thesis is an important part of the requirements for the award of the higher degrees toward which the students enrolled in these schools work. Compilations of the numbers of such students by sex, course, university, degree sought and year of expected graduation may be found in the annual series *Statistical Summary of Students Registered in the Graduate Schools of Canadian Universities in Physical and Earth Sciences, in Architecture and Engineering, and in Life Sciences*, published by the National Research Council, and *Graduate Students in the Humanities and Social Sciences Registered at Canadian Universities*, published by the Canadian Universities Foundation (now the Association of Universities and Colleges of Canada).

In 1963-64 there were 6,045 graduate students registered in those fields covered by the National Research Council publication, of whom 2,341 were preparing for the doctorate. Comparable figures for the humanities and social sciences were 6,903 graduate students and 975 doctorates, making a total of nearly 13,000 graduate students enrolled in 1963-64. In the same year, 481 Ph.D.'s and 3,490 Masters degrees and licences were conferred.

Financial Resources.—Financial support for university research comes primarily from five sources: departments and agencies of the Federal Government, quite heavily committed to support research largely in the natural and life sciences; industry, which supports both basic and applied research; private foundations, which have for many years been generous supporters of research, sometimes in selected fields; provincial governments; and the United States Government. Among these sources, the Federal Government is the largest single contributor. In 1963-64, its share of the total provision of funds for university research amounted to more than 60 p.c.; provincial governments and industry each contributed about 5 p.c.; 13 p.c. came from private foundations; and the remainder from other sources.

Although federal funds are channelled through almost a score of different departments and agencies, by far the greatest part of the total is disbursed by four agencies: the Defence Research Board, the Department of National Health and Welfare, the Medical Research Council and the National Research Council. Most of the assistance is in the form of direct grants in support of research projects undertaken by university staff members but a significant part of the total program is the assistance given to graduate students working for higher degrees. Funds are also made available to defray associated expenditures, such as those incurred in the publication of research journals and the holding of conferences.

The activities of the Defence Research Board in support of university research consist mainly in the provision of funds (\$2,400,000 in 1963-64) for projects in basic sciences that are relevant to the defence of the nation. Funds administered by the Department of National Health and Welfare (\$3,900,000) and the Medical Research Council (\$5,100,000) go chiefly to support research in the medical and para-medical sciences. The National Research Council (\$12,600,000) confines its support to the physical and earth sciences, architecture and engineering, and the life sciences.

In the humanities and social sciences, federal support of research is on a much smaller scale. Some Federal Government agencies such as the Defence Research Board and the Departments of Citizenship and Immigration, Labour, and Northern Affairs and National Resources operate small programs of university grants and contracts for research in economics, anthropology, sociology and related disciplines, but the total funds made available under these programs in 1963-64 amounted to only about \$100,000.

The major source of funds for the promotion of the arts, humanities and social sciences, including research in these fields, is the Canada Council (see p. 383). It is rather difficult to define and categorize the various aspects of the Council's support of university research. Broadly speaking, however, three main categories can be identified: assistance to individual postgraduate students and research fellows; grants-in-aid of particular research projects; and assistance with ancillary research activities such as the compilation of indexes and bibliographies, purchases for libraries, publication costs and travel expenses. The total disbursed for these purposes in 1963-64 was some \$400,000, distributed about equally among the three categories. In the case of scholarships and fellowships, only those awards (about 85) made to students pursuing their studies at Canadian universities and colleges are included. Many of the more than 100 grants-in-aid of research were paid to defray expenses involved in travel and study abroad but, as the grantees were generally staff members of Canadian universities, these sums are included in the total.

Subsection 4.—Industrial Research

Industrial research in Canada is changing very rapidly. The emergence of the country as a highly industrialized society, its entrance into multitudinous fields of production, the rapid growth of many large nation-wide industries, the serving of a discriminating domestic market and the meeting of competition from abroad have had the effect of making Canadian manufacturing establishments research conscious and many of the larger ones now possess competent research organizations.

On Nov. 29, 1962, an amendment was passed by Parliament to the Income Tax Act, allowing corporate taxpayers, commencing in 1962, to deduct 150 p.c. of their increased expenditures on scientific research for industrial purposes when computing taxable income. This amendment is evidence of the Federal Government's desire to encourage industrial research.

Industrial Research and Development Expenditures.—The latest DBS survey of expenditures on industrial research in Canada was conducted in 1964 and provided figures for the calendar year 1963 and estimates for the year 1964. These figures are summarized in the following tables; details are contained in DBS publication *Industrial Research and Development Expenditures in Canada, 1963* (Catalogue No. 13-524).

The type of industrial research and development covered by these surveys ranges from pure research designed to obtain new knowledge in the physical and life sciences to conceiving and developing new products and processes, or major changes in products and processes, and bringing them to the stage of production. Such activities as market research and process and quality control are excluded. Companies surveyed were asked to report the cost of research and development done within the company in Canada and payments for research done outside the company in Canada; estimates of payments for research and development conducted outside the company and outside of Canada were also requested.

Total figures show considerable fluctuation in expenditures on research and development over the years surveyed. However, this fluctuation has been caused largely by variations in Federal Government contracts to the aircraft sector of the transportation equipment industry. If all funds received from the Federal Government are removed from annual expenditures, a trend of continuous expansion is revealed. In 1963, 701 firms reported research expenditures; of these, 16 accounted for one half of all intramural research expenditures.

1.—Total Research and Development Expenditures, 1955-64

Year	Expenditure on Research and Development in Canada		Expenditure on Research and Development Outside Canada	Total
	Done Within Reporting Company	Done Outside Reporting Company		
	\$'000,000	\$'000,000	\$'000,000	\$'000,000
1955.....	51.4	1.9	12.1	65.4
1957.....	124.5	4.2	19.8	148.5
1958 (estimate).....	132.5	¹	27.0	159.5
1959.....	95.6	3.3	21.7	121.6

¹ Included with expenditures outside Canada.

² Since extramural payments include a number of payments which become intramural expenditures for the recipient firms, the totals have been adjusted to exclude duplication.

Three industries—transportation equipment, electrical products, and chemicals and chemical products—have accounted for more than one half of all research and development performed in Canada every year since 1955. In 1961, for the first time, the research and development expenditures of the transportation equipment industry, which are used largely for aircraft development, did not exceed those of every other industry. In that year the electrical products industry, which includes electronic equipment, was the leading performer of industrial research and development. In 1963, the transportation equipment industry, with \$31,200,000 assigned to research and development expenditures, was still behind the electrical products industry; however, if payments made outside Canada are included, the transportation equipment industry was first (\$39,300,000) and the electrical products industry was second (\$34,500,000).

2.—Research and Development Expenditures in Canada, by Major Industrial Group, 1961 and 1963

Group	1961 ²		1963	
	Amount	P.C. of Total	Amount	P.C. of Total
	\$		\$	
Transportation equipment.....	17,373,480	15.0	31,202,042	19.1
Electrical products.....	28,199,659	24.3	33,435,679	20.5
Chemicals and chemical products.....	20,292,535	17.5	25,021,027	15.3
Totals.....	65,865,674	56.8	89,658,748	54.9
Other industries.....	50,018,214	43.2	73,788,892	45.1
Grand Totals.....	115,883,888	100.0	163,447,640	100.0

Table 3 shows intramural research and development expenditures over the four years 1961-64. The transportation equipment industry is given separately because of substantial fluctuations in its expenditures. Most of the other industries have increased their research and development activities over the period; the chemical and electrical products industries reported the greatest absolute increases, together having accounted for over 40 p.c. of total intramural expenditures (excluding those of transportation equipment) since 1961.

¹ Estimates based on companies' intentions.

The product group for which the largest percentage of research and development expenditures was made in 1963 was the electrical products group, which accounted for 22.9 p.c. of the total compared with 18.9 p.c. in 1961. The chemicals group, including drugs and medicines, which accounted for 20.0 p.c. in 1961 and was in first place in that year, declined to 10.6 p.c. in 1963. The transportation equipment group as a whole received 18.8 p.c. of the total in 1963, of which aircraft and parts accounted for 16.7 p.c. as compared with 15.7 p.c. in 1961.

Section 6.—Federal Government Expenditures on Scientific Activities

Biennial surveys carried out by the DBS give information on Federal Government expenditures on scientific activities for the years ended Mar. 31, 1959-65. Each survey covers the actual costs of the preceding year and the estimated expenditures for the current year incurred by the physical and life sciences; the social and psychological sciences are not included. For purposes of the survey, "scientific activities" include scientific research and development, scientific data collection, scientific information and scientific scholarships. Data are also compiled on capital expenditures on plant for scientific activities and on personnel employed in research and development.

As shown in Table 6, total 1962-63 costs of scientific activities were slightly lower than those incurred in 1961-62 but estimates indicate a rise of 16 p.c. in 1963-64 and of 12.5 p.c. in 1964-65. Among the departments and agencies, the National Research Council records the greatest increase during the period, its 1964-65 expenditures of \$62,600,000 being 56.1 p.c. higher than those for 1961-62. The departments and agencies listed in Table 6 accounted for 92 p.c. of the Federal Government's expenditure on scientific activities in 1958-59 but their relative share will decrease to 80 p.c. by 1964-65. During the latest year, each of six other departments—Industry, Fisheries, Forestry, National Health and Welfare, Northern Affairs and National Resources, and Transport—reported its intention to spend more than \$5,000,000 on scientific activities.

Federal expenditures on scientific activities are classified in greater detail in Table 7 for the years ended Mar. 31, 1963 and 1965. In this table, expenditures by the Department of National Defence, which make up almost one quarter of the total, are shown separately.

¹ Estimated.² Capital expenditures by two of the three Services are unavailable.

About three quarters of the payments made by the Federal Government on scientific activities are for the conduct of research and development. Although the Government continues to perform most of this research within its own establishments, its support of outside research is increasing; in 1961-62 intramural expenditures accounted for 80 p.c. of the total but by 1964-65 this percentage will have fallen to about 69. The proportion performed by Canadian industry, which was 11 p.c. in 1961-62, will have increased to 20 p.c. by 1964-65, and that performed in Canadian universities will have increased from 7 p.c. to 10 p.c. in the same comparison.

8.—Federal Government Expenditures on the Conduct of Research and Development, Years Ended Mar. 31, 1962-65

(Millions of dollars)

Performing Organization	1961-62 ¹	1962-63	1963-64 ¹	1964-65 ¹

Others (incl. non-profit organizations, other governments and foreign recipients)	3.4	2.9	4.0	3.4
Totals, Expenditures	192.7	188.9	219.6	243.0

¹ Estimated.

As shown in Table 9, the proportion of government funds allotted to the support of research and development in the physical sciences increased over the period 1962-63 to 1964-65 from about 70 p.c. to 74 p.c., and engineering continued to receive more than 55 p.c. of these funds. Within the life sciences, more than one half of the research and development expenditures continue to support the agricultural sciences. Table 9 also classifies research and development expenditures by area of investigation. It is noteworthy that expenditures in the field of space travel and communications increased from 0.9 p.c. of the total in 1962-63 to 3 p.c. in 1964-65. In the latter year, approximately 16 p.c. of the research and development expenditures will be allotted to nuclear science research and 35 p.c. to military research.

Section 1.—Canadian Criminal Law and Procedure†

The system under which justice is administered in a State is never rigid. To have it so would be neither expedient nor indeed possible. A judicial system must grow and adapt itself to the requirements of the people, and the exact limits of the powers of different legislative bodies require continued definition.

The criminal law of Canada has as its foundation the criminal common law of England built up through the ages and consisting first of customs and usages and later expanded by principles enunciated by generations of judges. There is no statutory declaration of the introduction of English criminal law into those parts of Canada that are now the Provinces of New Brunswick, Nova Scotia and Prince Edward Island. Its introduction there depends upon a principle of the common law itself by which English law was declared to be in force in uninhabited territory discovered and planted by British subjects, except in so far as local conditions made it inapplicable. The same may be said of Newfoundland although the colony dealt with the subject in a statute of 1837. In Quebec its reception depends upon a Royal Proclamation of 1763 and the Quebec Act of 1774. In each of the other provinces and in the Yukon and Northwest Territories the matter has been dealt with by statute.

The judicial systems of the provinces as they exist today are based upon the British North America Act of 1867. Sect. 91 of the Act provides that "The exclusive legislative authority of the Parliament of Canada extends to . . . the criminal law, except the constitution of courts of criminal jurisdiction but including the procedure in criminal matters". By Sect. 92 (14), the legislature of the province exclusively may make laws in relation to "the administration of justice in the province, including the constitution, maintenance and organization of provincial courts, both of civil and criminal jurisdiction and including procedure in civil matters in its courts". The Parliament of Canada may, however (Sect.

* Except as otherwise credited, this Chapter has been revised in the Judicial Section, Health and Welfare Division, Dominion Bureau of Statistics.

† Prepared by the Criminal Law Section, Department of Justice, Ottawa.

101), establish any additional courts for the better administration of the laws of Canada. It should be noted that the Statute of Westminster, 1931 effected important changes, particularly by abrogating the Colonial Laws Validity Act, 1865 (Br.) and confirming the right of a dominion to make laws having extraterritorial operation. Particulars of the federal judiciary are given in Chapter II, pp. 91-92, and provincial judiciaries are dealt with briefly at p. 93; more detailed information on provincial judiciaries is given in the 1954 Year Book, pp. 47-55.

At the time of Confederation each of the colonies affected had its own body of statutes relating to the criminal law. In 1869, in an endeavour to assimilate them into a uniform system applicable throughout Canada, Parliament passed a series of Acts, some of which dealt with offences of special kinds and others with procedure. Most notable of the latter was the Criminal Procedure Act, but other Acts provided for the speedy trial or summary trial of indictable offences, the powers and jurisdiction of justices of the peace in summary conviction matters and otherwise, and the procedure in respect of juvenile offenders.

Codification of the criminal law through a Criminal Code Bill founded on the English draft code of 1878, Stephen's *Digest of Criminal Law*, Burbidge's *Digest of the Canadian Criminal Law*, and the relevant Canadian statutes was brought about by the Minister of Justice, Sir John Thompson, in 1892. This Bill became the Criminal Code of Canada and came into force on July 1, 1893. It must be remembered, however, that the Criminal Code was not exhaustive of the criminal law. It was still necessary to refer to English law in certain matters of procedure and it was still possible to prosecute for offences at common law. Moreover, Parliament has declared offences against certain other Acts, e.g., the Narcotic Control Act, to be criminal offences and the same was done in the Defence of Canada Regulations and the Wartime Prices and Trade Board Regulations (neither now in force) promulgated under the authority of the War Measures Act.

It is often difficult to distinguish between 'law' and 'procedure'. Procedure may be interpreted to relate simply to the organic working of the courts but, in a wider sense it may also affect the rights or alter the legal relations arising out of any given state of facts. For present purposes it will be useful to note that writers on jurisprudence describe law as being substantive or adjective. "Substantive law is concerned with the ends which the administration of justice seeks; procedural (adjective) law deals with the means and instruments by which these ends are to be obtained."* With reference to the criminal law, the former may be taken to include the provisions concerning criminal responsibility the definition of 'offences' and the punishment for those offences, and the latter to include provisions for enforcement, e.g., powers to search and to arrest, for the modes of trial and for the proof of facts. Broadly speaking, the Criminal Code observes the distinction although it might appear that the provisions for preventive detention of habitual criminal and dangerous sexual offenders partake of the nature of both classes.

An examination and study of the Criminal Code was authorized by Order in Council dated Feb. 3, 1949, and the Commission assigned the task of revising the Code presented its report with a draft Bill in February 1952. After coming before successive sessions of Parliament it was finally enacted on June 15, 1954 and the new Criminal Code (SC 1953-54 c. 51) came into effect on Apr. 1, 1955. A short outline of the system that existed under the repealed Code together with the major revisions effected by the new Code is given in the 1955 Year Book, pp. 295-298.

Since the new Code came into force several amendments have been made, for the most part in relation to procedure. Among the most notable of these, as well in point of procedure as of substance, are: an amendment in 1956 providing that motions for leave to appeal to the Supreme Court of Canada in criminal cases should be heard by a quorum (at least five) of judges of that Court instead of a single judge; amendments effected by SC 1959, c. 41, providing a statutory extension of the definition of "obscenity" and makin

* Salmond on *Jurisprudence*, 7th Edition, p. 496.

provision for seizure and condemnation of offending material without a charge necessarily being laid against any person; extensive amendments relating to the allowing of time for payment of fines; amendments dealing with offences committed in aircraft in flight over the high seas; an amendment forbidding the publication in a newspaper or broadcast of a report that any admission or confession was tendered in evidence at a preliminary inquiry or a report of the nature of such admission or confession unless the accused has been discharged or, if the accused has been committed for trial, the trial has ended.

The Parole Act (SC 1958, c. 38), brought into force on Feb. 15, 1959, revises the parole system and provides for the establishment of a National Parole Board (see pp. 436-437).

It is most important to note that in 1960 (SC 1960, c. 44) Parliament enacted what is known as the Canadian Bill of Rights. Although the Act sets out further details, its general scope appears in Sect. 1, which reads as follows:—

"1. It is hereby recognized and declared that in Canada there have existed and shall continue to exist without discrimination by reason of race, national origin, colour, religion or sex, the following human rights and fundamental freedoms, namely,

- (a) the right of the individual to life, liberty, security of the person and enjoyment of property, and the right not to be deprived thereof except by due process of law;
- (b) the right of the individual to equality before the law and the protection of the law;
- (c) freedom of religion;
- (d) freedom of speech;
- (e) freedom of assembly and association; and
- (f) freedom of the press."

Although the Bill of Rights has been invoked on various occasions, the courts have not held it to affect the operation of the Criminal Code.

In 1961 (SC 1960-61, cc. 43-44), the offence of murder was divided into capital and non-capital. The death penalty was abolished in relation to the offence of non-capital murder. Also in 1961 the term *criminal sexual psychopath* was dropped and the term *dangerous sexual offender* substituted. More detailed information is available in the 1962 Year Book, pp. 354-355.

Section 2.—Adult Offenders and Convictions

Offences may be classified under two headings, "indictable offences" and "offences punishable on summary conviction". Indictable offences are grouped in two main categories: (1) offences that violate the Criminal Code and (2) offences against federal statutes. These include the graver crimes. Offences punishable on summary conviction—those not expressly made indictable—include offences against the Criminal Code, provincial statutes and municipal by-laws. It is debatable how far some summary conviction offences are of a criminal nature and whether their increase indicates an increase in crime. Many are breaches of municipal by-laws and contrary to public safety, health and comfort, as, for example, parking violations or practising trades without licence but, on the other hand, summary conviction offences may include such serious charges as assault and contributing to juvenile delinquency.

The following Subsection 1 deals with adults convicted of indictable offences, Subsection 2 with young adult offenders convicted of indictable offences, Subsection 3 with convictions for summary conviction offences and Subsection 4 with appeals.

Subsection 1.—Adults Convicted of Indictable Offences

Statistics of indictable crimes are based on persons, so that it may be possible to evaluate the population engaged in prohibited activities and to help in the treatment of anti-social behaviour in terms of subject-centred action. In the present counting system, while individuals may be charged with more than one offence, only one offence is

tabulated for each person. This offence is selected according to the following criteria: (1) if the person were tried on several charges, the offence selected is that for which proceedings were carried to the farthest stage—conviction and sentence; (2) if there were several convictions, the offence selected is that for which the heaviest punishment was awarded; (3) if the final result of proceedings on two or more charges were the same, the offence selected is the more serious one, as measured by the maximum penalty allowed by the law; (4) if a person were prosecuted for one offence and convicted of another—for example, charged with murder and convicted of manslaughter—the offence selected is the one for which the person was convicted.

In 1963 there were 47,616 adults charged with 86,674 indictable offences, of whom 42,914 were found guilty of 78,518 offences. In the previous year there were 42,935 adults charged with 81,181 indictable offences, of whom 38,663 were found guilty of 71,507 offences.

1.—Persons Charged and Persons Convicted of Indictable Offences, with Ratio per 100,000 Population 16 Years of Age or Over, by Province, 1962 and 1963

Table 2 classifies indictable offences by type of offence for 1962 and 1963. Class I covers offences against the person and in 1963 there were 5,786 males and 240 female convicted in this category, mostly for assaults of various kinds. Classes II to IV deal with offences against property. Thefts predominate among the offences in these classes, and breaking and entering and robbery, serious crimes which involve acts of violence, are the next most numerous. Class V deals with offences relating to currency and Class VI with miscellaneous offences; among the latter, the most numerous convictions are for offence connected with gaming, betting and lotteries. In 1963 there were 288 men and 122 women convicted under federal statutes of whom 191 men and 105 women were offenders under the Narcotic Control Act.

¹ Includes abortion, indecent assault on female, sexual intercourse and attempt, incest, procuring, rape, attempted rape and seduction.

² Includes causing death in the operation of a motor vehicle or otherwise.

Table 3 shows that 47.0 p.c. of the persons convicted of indictable offences in 1963 had not gone beyond elementary school grades in education, 53.0 p.c. were 24 years of age or younger, 33.5 p.c. were between the ages of 25 and 44, and 78.8 p.c. lived in urban centres. Of these offenders, 91.3 p.c. were males, 87.3 p.c. were born in Canada, 62.3 p.c. were unmarried, 21.2 p.c. were recorded as labourers and 11.4 p.c. had no remunerative employment.

Female Offenders.—There were 3,736 female offenders convicted of indictable offences in 1963 compared with 3,148 in 1962. Of these offenders, Ontario accounted for 1,470, Quebec for 717 and British Columbia for 560. The ratio of female offenders convicted to total convictions moved upward from 8.1 p.c. in 1962 to 8.7 p.c. in 1963 with a provincial range from 1.6 p.c. in Prince Edward Island to 10.7 p.c. in Manitoba.

4.—Females Convicted of Indictable Offences, by Province, 1962 and 1963

Grand Totals.....	31,092	35,443	38,679	38,663	42,914

Disposition of Cases and Previous Convictions.—As shown in Table 1, p. 420, of all suspects before the courts for indictable offences in 1963, 90.1 p.c. were adjudged guilty. There was, however, considerable variation among the provinces in this respect, the proportion ranging from 86.6 p.c. in Ontario to 97.6 p.c. in New Brunswick.

Table 6 shows that of the 42,914 persons convicted in 1963, 26.2 p.c. had no previous conviction, 14.5 p.c. had previously been found guilty of one offence and 34.2 p.c. had two or more earlier convictions. Court records for the other 25.1 p.c. were not obtained.

Sentences, Method of Trial and Court Proceedings.—Table 7 summarizes the sentences given for indictable offences, Table 8 shows the method of trial and disposition of cases, and Table 9 shows persons charged and convicted of indictable crimes according to trial court.

Two kinds of sentences maintain for a certain period of time a relationship between the person dealt with by the court and the legal institutions of a community—probation and commitment to an institution. There are several types of institutions to which a person can be committed, such as penitentiaries, reformatories, gaols and industrial farms. Theoretically, every institution has a specific purpose which is supposed to be taken into account when arriving at a legal decision. In practice, however, the availability of an institution in a given community is a factor in determining the decision rendered by the court.

Subsection 2.—Young Adult Offenders (16-24 Years) Convicted of Indictable Offences

Attention has been focused in recent years on the needs of the young adult offenders of from 16-24 years of age who constitute a promising field for modern reception and diagnostic facilities equipped with educational, trade training and other formative disciplines. While young men and women in this age group account for under 18.7 p.c. of the total population 16 years of age or over, they form over half the criminal population

committing indictable offences. The group includes some of the most daring offenders who already may be experienced criminals as well as first offenders likely to be turned from crime by further education and training.

There were 22,753 young adult offenders in 1963, an increase of 2,914 over the previous year. Although each of the three age groups and both sexes contributed to the increase, almost half of it was in the male group 16-17 years of age.

Subsection 3.—Convictions for Summary Conviction Offences

Offences punishable on summary conviction are triable by magistrates and justices of the peace under Part XXIV of the Criminal Code (SC 1953-54, c. 51) or under the provincial summary conviction Acts as the case may be. Data relating to these offences are based on convictions; no information is available on either the number of persons involved in these offences or the number of charges. In these cases, following arrest or summons to appear in court, the accused person must be tried by a magistrate or justice of the peace without the intervention of a jury. Such cases are heard in police court with the minimum of delay.

13.—Convictions for Summary Conviction Offences, by Type, 1962 and 1963

Subsection 4.—Appeals

Appeal is an important safeguard in Canada's legal system and the conviction of a jury or judge may be appealed on the grounds that the verdict was unreasonable, that there was a wrong decision on some question of law or that there was a miscarriage of justice. In 1963 there were 2,721 appeals in indictable cases disposed of by the courts, of which 96 were Crown appeals and 2,625 appeals of the accused. Of the Crown appeals, 30 were from acquittal and 66 from sentence; of the appeals of the accused, 830 were from conviction and 1,795 from sentence. Appeals in summary conviction cases disposed of by the courts numbered 1,790 in 1963. Of these, 168 were appeals of the informant and 1,622 appeals of the accused. The informant appeals comprised 130 from acquittal and 38 from sentence and appeals of the accused comprised 1,426 from conviction and 196 from sentence.

Section 3.—Juvenile Delinquents

Juvenile Delinquent, as defined in the Juvenile Delinquents Act, means any child who violates any provision of the Criminal Code or of any federal or provincial statute, or of any by-law or ordinance of any municipality, or who is guilty of sexual immorality or any similar form of vice, or who is liable by reason of any other act to be committed to an industrial school or juvenile reformatory under the provision of any federal or provincial statute. The commission by a child of any of these acts constitutes an offence known as a delinquency.

The upper age limit of children brought before the juvenile courts in the provinces varies. The Act defines a child as meaning any boy or girl apparently or actually under the age of 16 years, or such other age as may be directed in any province. In Prince Edward Island, Nova Scotia, New Brunswick, Ontario and Saskatchewan under 16 is the official age in Alberta under 16 for boys and under 18 for girls; in Newfoundland under 17; in Quebec Manitoba and British Columbia under 18 years. In the interests of uniformity, it has been the practice of the Dominion Bureau of Statistics to publish information about juvenile delinquents 16 years of age or over in the annual report on *Statistics of Criminal and Other Offences* and to publish data relating to those under 16 years of age in a report entitled *Juvenile Delinquents*. In 1963, 3,558 juveniles 16 and 17 years of age were found delinquent in those provinces where the upper age limit is under 17 or under 18 years of age.

Included in the statistics of juvenile delinquents are cases (alleged as well as adjudged) which were brought before the courts and dealt with formally. A case was counted separately each time a child appeared before the court for a new delinquency or delinquencies. In instances where multiple delinquencies were dealt with at one court appearance, only one delinquency—the most serious—was selected for tabulation. Delinquencies reported as informal cases by the courts were not included nor were cases of children presenting conduct problems which were not brought to court or which were dealt with by the police, social agencies, schools, or youth-serving agencies. Thus, community facilities for dealing with children's problems may have an influence on the number of cases referred to court and, therefore, an effect on the statistics of juvenile delinquents.

14.—Juveniles brought before the Courts, by Province, and Total Dismissed and Delinquent, 1959-63

Section 4.—Correctional Institutions and Training Schools

Subsection 1.—Statistics of Correctional Institutions and Training Schools

Correctional institutions may be classified under four headings: (1) Penitentiaries—operated for adult offenders by the Federal Government in which, generally speaking, sentences of over two years are served; (2) Reformatories—operated for adult offenders by the provinces in which individual sentences of up to two years are served; (3) Common Gaols—operated for adult offenders by the provinces or counties in which sentences of up to two years can be served but in which, generally speaking, short-term sentences are served; and (4) Training Schools—operated by the provinces or private organizations under provincial charter for juvenile offenders serving indefinite terms up to the legal age for children in the particular province.

There is a limited amount of statistical information available with respect to these types of institution. "In custody" figures shown in Table 23 for penitentiaries refer only to those persons under sentence, but the figures for admissions include those received from courts as well as by transfer from other penitentiaries and by cancellation of tickets-of-leave and paroles. Figures for releases include expiry of sentences, transfers between penitentiaries, releases on ticket-of-leave and parole, deaths, pardons and releases on court order. In custody figures for provincial and county institutions may include, in addition to those serving sentences, persons awaiting trial, on remand for sentence or psychiatric examination, awaiting appeal or deportation, any others not serving sentence and, for training school population, juveniles on placement.

Population figures in Tables 23 and 24 are for a given day of the year, which is Mar. 31 except for Quebec gaols where populations are counted as of Dec. 31. These figures represent, in effect, a yearly census of correctional institutions and, as such, are not indicative of the daily average population count. For instance, if an abnormal number of commitments is made to a certain institution on or just prior to Mar. 31, the result will be an unrepresentative population total for the institution in that year.

With regard to the fluctuations that might have occurred during the year between census days, the total population of correctional institutions has shown a general increase

since Mar. 31, 1959; totals for training schools and provincial adult institutions have shown a tendency to level off or decline slightly but penitentiary population has increased steadily.

Subsection 2.—The Canadian Penitentiary Service*

The penitentiaries of Canada are administered by the Commissioner of Penitentiaries, responsible directly to the Minister of Justice. In the year ended Mar. 31, 1965, the federal penitentiary system consisted of six maximum security, four medium security and fifteen minimum security institutions, all for males; one prison for women; one maximum security prison camp for males of the Freedomite Doukhobor Sect; and two Correctional Staff Colleges.

The six maximum security institutions receive inmates sentenced by the courts to imprisonment for terms of from two years to life. These are located at New Westminster, B.C., Prince Albert, Sask., Stony Mountain, Man., Kingston, Ont., St. Vincent de Paul, Que., and Dorchester, N.B. Persons sentenced to penitentiary terms in Newfoundland are held in the provincially operated institution at St. John's, under financial arrangements authorized by Sect. 14 of the Penitentiary Act (SC 1960-61, c. 53).

The medium and minimum security institutions and the camps receive inmates transferred from the maximum security (receiving) institutions on the basis of their suitability for special forms of training, including vocational training. Of the medium security institutions, two—Collin's Bay Penitentiary and the Joyceville Institution—are within a few miles of Kingston. The other two—the Federal Training Centre and the Leclerc Institution—are close to St. Vincent de Paul.

Eight minimum security correctional camps are operated as extensions of a main institution in their respective areas. These are located at William Head and Agassiz, B.C.;

*Prepared under the direction of A. J. MacLeod, Commissioner of Penitentiaries, Ottawa.

Beaver Creek and Landry Crossing near Bracebridge and Petawawa, Ont.; Gatineau (Gatineau Park) and Valleyfield, Que.; Blue Mountain near Gagetown, N.B.; and Springhill, N.S. Six minimum security farm annexes operate as extensions of the penitentiaries at Dorchester, St. Vincent de Paul, Collin's Bay, Joyceville, Stony Mountain and Prince Albert, respectively. There is also a minimum security industrial satellite at St. Vincent de Paul.

The Prison for Women at Kingston, Ont., receives inmates transferred upon committal to penitentiary in any part of Canada. Prior to Dec. 1, 1960, it operated as a detached portion of Kingston Penitentiary.

The special security Prison Camp for Freedomites who have been sentenced to imprisonment in penitentiary is located near Agassiz, B.C., and is called Mountain Prison.

The two Correctional Staff Colleges—one at Kingston and one at St. Vincent de Paul—are for the advanced training of penitentiary officers. The Kingston College serves English-speaking or bilingual officers and the St. Vincent de Paul College is primarily for French-speaking officers from all parts of Canada. These Staff Colleges provide excellent facilities for Service-wide conferences of institutional heads and other special groups of officers.

The Headquarters of the Service is located in Ottawa. Regional directorates have been established at New Westminster, B.C., Kingston, Ont., and St. Vincent de Paul, Que., for the Western, Ontario and Quebec areas, respectively.

Subsection 3.—The National Parole System*

Parole is a means by which an inmate in any institution in Canada, if he gives definite indication of his intention to reform, can be released from prison. The purpose of parole is the protection of society, through the rehabilitation of the inmate. The Parole Board is as much concerned with the protection of society as with the reformation of the inmate, and the welfare of an individual inmate must not be allowed to impair the success of the parole system or the protection of the public.

The function of the Parole Board is to select those inmates in the various institutions in Canada who show some indication of a sincere intention to reform and to assist them in doing so by a grant of parole. The inmate then is allowed to serve the remainder of his sentence in society, but under supervision and subject to restrictions and conditions as to his conduct and behaviour, which are designed for his welfare and for the protection of society. The Board is not a reviewing authority and is not concerned with the propriety of the conviction or the length of the sentence, but only with the problem of deciding in each case whether or not there is a reasonable chance of reformation. Parole is not a matter of clemency and is not granted on compassionate or humanitarian grounds but only if it appears that there is at least a reasonable chance the inmate will lead a law-abiding life.

The National Parole Board is composed of a Chairman and four Members (one woman) and was formed in January 1959. It operates under the authority of the Parole Act (SC 1958, c. 38) which came into force on Feb. 15, 1959 replacing the former Ticket-of-Leave Act. It has jurisdiction over any adult inmate in any prison in Canada convicted of an offence against an Act of the Parliament of Canada. It also has jurisdiction to revoke or suspend any sentence of whipping or any order made under the Criminal Code prohibiting any person from operating a motor vehicle.

The decision of the Board is based on reports it receives from the police, from the trial judge or magistrate and from various people at the institution who deal with the inmate. Reports are also obtained from a psychologist or psychiatrist, when available. Where necessary, a community investigation is conducted to secure as much information as possible about the man's family and background, his work record and his position in the community. From all these reports, an assessment is made to determine whether or not he has changed his attitude and is likely to lead a law-abiding life. An inmate need not

* Prepared by T. G. Street, Chairman, National Parole Board, Ottawa.

obtain the services of a lawyer to apply for parole. He may apply by sending a letter to the Board and is assisted in preparing such an application at the institution, or another person may apply on his behalf. The Board automatically reviews all sentences of over two years. As soon as an application is received, a file is opened and investigation begun, the results of which are presented to the Board for decision.

All applications and reports are processed by the Parole Board staff at Ottawa. In addition to the headquarters staff, there are 24 regional officers stationed in ten regional offices across the country. They interview all applicants for parole to give them an opportunity of making verbal representations to a representative of the Board. The regional officers also submit to the Board reports of interviews and their assessment of the inmates' suitability for parole. These men have authority over the parolees in their respective areas and also give information and counsel to all inmates regarding possibility of parole and preparation for it. They may also issue a Warrant of Suspension and have a parolee arrested and placed in custody if it is necessary to prevent a breach of any term or condition of the parole. They are thus able to exercise effective and adequate control over all parolees in their respective areas.

A person on parole is under the care of a supervisor, usually an after-care agency worker or a probation officer, who reports to the regional officer. If he violates the conditions of his parole or commits a further offence or misbehaves in any manner, the Board may revoke his parole and return him to the institution to serve that part of his sentence outstanding at the time his parole was granted. If a parolee commits an indictable offence while on parole, his parole is automatically forfeited and he is returned to the institution to serve the unexpired balance of his sentence, plus any new term to which he was sentenced for the commission of the new offence.

It is essential that the general public should understand that the true purpose of punishment should be the reformation of the offender and not just vengeance or retribution. The treatment and training program in the institutions is a vital part of the correctional process and parole is an extension of this training outside the institution. It is not a matter of pampering prisoners but of trying to reform as many as possible and of giving prisoners a chance to rehabilitate if they seem to deserve it.

During the first six years of its operation the Board reviewed 50,845 cases, including applications for parole and automatic parole review, and granted 12,361 paroles. During the same period the Board revoked 1,254 paroles, which is a general average failure rate over the six-year period of 10 p.c. Of these 1,254 who failed on parole, 638 paroles were forfeited because of the commission of an indictable offence and 616 were revoked for misbehaviour or the commission of a minor offence.

Section 5.—Police Forces

Organization of Police Forces.—The police forces of Canada are organized in three groups: (1) the federal force, which is the Royal Canadian Mounted Police; (2) provincial police forces—the Provinces of Ontario and Quebec have their own provincial police forces but all other provinces engage the services of the Royal Canadian Mounted Police to perform parallel functions within their borders; and (3) municipal police forces—each urban centre of reasonable size maintains its own police force or engages the services of the provincial police, under contract, to attend to police matters. In addition, the Canadian National Railways, the Canadian Pacific Railway Company and the National Harbours Board have their own police forces.

The Royal Canadian Mounted Police.—The Royal Canadian Mounted Police is a civil force maintained by the Federal Government. It was established in 1873 as the North-West Mounted Police for service in what was then the North-West Territories and, in recognition of its services, was granted the use of the prefix "Royal" by King Edward VII in 1904. Its sphere of operations was expanded in 1918 to include all of Canada west of

Port Arthur and Fort William and in 1920 it absorbed the Dominion Police, its headquarters was transferred from Regina to Ottawa and its title was changed to Royal Canadian Mounted Police.

The Force is under the control of the Minister of Justice and is headed by a Commissioner who holds the rank and status of a Deputy Minister. Officers are commissioned by the Crown and are selected from the non-commissioned ranks. The Force has complete jurisdiction in the enforcement of the federal statutes. By arrangement between the federal and provincial governments, it enforces the provincial statutes and the Criminal Code in all provinces exclusive of Ontario and Quebec and under special agreement it polices some 121 municipalities. It is the sole police force in the Yukon and Northwest Territories, where it also performs various administrative duties on behalf of certain departments of the Federal Government. It maintains liaison officers in London and Washington and represents Canada in the International Criminal Police Organization, which has headquarters in Paris.

Of the Force's 17 divisions, 12 are actively engaged in the work of law enforcement, as are some 42 subdivisions and 648 detachments. The five remaining divisions are "Headquarters", "Depot" and "N", which are maintained as training centres, and "Marine" and "Air", which support the operations of the land divisions. A teletype system links the widespread divisional headquarters with the administrative centre at Ottawa and a network of fixed and mobile radio units operates within the provinces. Focal point of the Force's criminal identification work is the Headquarters Identification Branch; its services, together with those of the divisional and subdivisional units and the four Crime Detection Laboratories, are available to police forces throughout Canada. The Force operates the Canadian Police College at which Force members and selected representatives of other Canadian and foreign police forces may study the latest advances in the fields of crime prevention and detection.

The uniform strength of the Force at Mar. 31, 1965 was 7,102, including Marine Constables and Special Constables, at which time it maintained some 2,002 motor vehicles, 20 aircraft, 63 ships and boats, 249 sleigh dogs, 22 police service dogs and 231 horses.

Quebec Provincial Police Force.—The Quebec Provincial Police Force is responsible for the maintenance of peace, order and public safety in the province, and for the prevention and investigation of criminal offences and of violation of all laws of the province.

The province is divided into two almost equal parts known as the Montreal Division and the Quebec Division. The Montreal Division is divided into three subdivisions with headquarters at Granby, Hull and Montreal. The Quebec Division is also divided into three subdivisions with headquarters at Chicoutimi, Quebec and Rimouski. There are 112 detachments throughout the province—62 in the Montreal Division and 50 in the Quebec Division. The Force at the end of 1964 had 1,950 regular members—46 officers, 389 non-commissioned officers, and 1,515 constables.

The Quebec Provincial Police Force is under the command of a Director General who is assisted by an officer holding the rank of Deputy Director General. Each Division is headed by an Assistant Director. A commissioned officer is in command of each subdivision.

Ontario Provincial Police Force.—The Ontario Provincial Police, which has an authorized strength of over 3,600, enforces federal and provincial law in those areas that do not maintain a police department and on all King's Highways. The Force is administered, from General Headquarters at Toronto, by a Commissioner who has the rank and status of a Deputy Minister under the Attorney General. Other senior executive officers include two Deputy Commissioners, five Assistant Commissioners, and an Administrative Aide to the Commissioner. The Force has two principal divisions—Operations and Services—

which are administered under the supervision of the Deputy Commissioner, Operations and Deputy Commissioner, Services, respectively. In turn, the five Divisions at the next level are administered by their respective Assistant Commissioners: Assistant Commissioner, Field; Assistant Commissioner, Traffic; Assistant Commissioner, Administration; Assistant Commissioner, Staff Services; and Assistant Commissioner, Special Services. Specialized branches under Special Services include Criminal Investigation, Liquor Law Enforcement, Precious Metals Theft, Anti-gambling, Anti-rackets, Auto Theft, and Intelligence Branches. Under Staff Services, the Central Records Branch offers a 24-hour, seven-day-week service to all police departments in Ontario on such matters as fingerprints records, criminal records, dry cleaning and laundry mark identification, photographic service, stolen and recovered property lists.

In addition to policing those parts of Ontario that are without municipal police forces, the Ontario Provincial Police Force is responsible for providing special services to the municipal forces in specialized areas, including the investigation of serious crime, and is required to maintain sufficient manpower to ensure proper policing within the municipalities in emergency situations.

In the field there are 218 detachments controlled through 17 District Headquarters located at Chatham, London, Burlington, Niagara Falls, Toronto, Mount Forest, Barrie, Peterborough, Belleville, Perth, Long Sault, North Bay, Sudbury, Sault Ste. Marie, Timmins, Port Arthur and Kenora. In addition, there are 40 municipalities policed under special contract.

The Force operates one of the largest frequency-modulation radio networks in the world, with 76 fixed radio stations and more than 920 radio-equipped mobile units, including motorcycles, marine units and aircraft. The Force also operates an interprovincial telecommunications network connecting all 17 Districts as well as other police departments on a local, national and international basis. Because of territorial peculiarities, the northern districts augment their normal transportation facilities by the use of snowmobiles, swamp buggies, dog teams and a variety of rail transport facilities.

In addition to regular constable recruitment, the Force has a cadet program, making it possible for qualified young men to create for themselves a career in a long-established police force. A recent important development in the progress of this Crown Force occurred when legislative enactment provided that all ranking officers from inspector up to and including the Commissioner, receive the Queen's Commission in the same manner as the Armed Forces.

Municipal Police Forces.—Provincial legislation makes it mandatory for cities and towns to furnish adequate municipal policing for the maintenance of law and order in their communities. Also, all villages and townships or parts of townships that have a population density and a real property assessment sufficient to warrant maintenance of a police force, and have been so designated by Order in Council, are made responsible for the adequate policing of their municipalities.

Uniform Crime Reporting.—A new method of reporting police statistics (police administration, crime and traffic enforcement statistics), known as the Uniform Crime Reporting Program, was commenced on Jan. 1, 1962. The program was developed by the Dominion Bureau of Statistics in co-operation with the Canadian Association of Chiefs of Police Committee on Uniform Crime Reporting. Historically, the police have compiled selected statistics to meet their own needs and have been prepared to give an account of crimes in their jurisdictions. However, the definitions and methods for collecting these statistics were not uniform and the data could not be expressed with consistency on a national, provincial or local basis. With the development of the Uniform Crime Reporting Program, meaningful statistical aggregates became possible. The police were supplied

with a manual of instructions containing standard definitions for the reporting of police administration, crime and traffic enforcement statistics on specially designed statistical forms to be submitted to the DBS.

Police Personnel.—As shown in Table 25, full-time police personnel (police, civilian employees, etc.) in Canada numbered 33,953 at Dec. 31, 1963. Police strength was 29,023, civilian employees numbered 4,431, trainees 233 (all municipal police), and other employees 266. Thus, there was a ratio of 1.8 police personnel for every 1,000 persons in Canada; the ratio of policemen alone was 1.5. Police personnel ratios in the provinces ranged from 1.0 to 5.2 per 1,000 persons and policemen ratios from 0.9 to 5.0.

In 12 selected metropolitan areas there were 12,727 police personnel, including 12,536 municipal police personnel, 184 Royal Canadian Mounted Police under contract and seven provincial police under contract. Total municipal police personnel numbered 19,984, made up of 19,031 in municipal forces, 867 Royal Canadian Mounted Police under contract and 86 provincial police under contract.

There were no policemen killed by criminal action in 1963 but 14 lost their lives accidentally while on duty. Police transport facilities at the end of the year included 5,421 automobiles, 808 motorcycles, 380 boats, 310 horses and 18 aircraft.

¹ Includes trainees; those on actual strength numbered 224 males and 9 females.² Not reported by sex.

Crime Statistics.—Table 26 shows the number of crimes dealt with by the police in 1963, including offences under the Criminal Code, federal statutes, provincial statutes and municipal by-laws; clearances by charge and otherwise; and the number of adults and juveniles charged. Offences known to the police but discarded as being unfounded are not shown in the table but numbered 31,338 under Criminal Code classifications (except traffic) and 8,447 under other statutes (except traffic). Traffic enforcement statistics are given separately at the end of the table.

During 1963, the police reported 41,347 offences committed against the person, including 217 murders, 6,961 cases of rape or other sexual offence, and 34,027 offences of wounding and other assault (not indecent); all offences against the person resulted in the charging of 19,372 persons, 1,117 of them juveniles. During the year there were 363,002 cases of robbery, theft and other offences against property, with or without violence, resulting in 74,152 persons charged, 22,365 of them juvenile males and 1,268 juvenile females. Other Criminal Code offences included 30,400 cases of fraud, false pretences, forgery, etc., 1,626 offences of prostitution, 2,881 gaming and betting offences and 2,900 offensive weapon offences. Of the 26,677 federal statute offences reported, 687 were under the Narcotic Control Act and 215 under the controlled drugs part of the Food and Drugs Act. These two classifications resulted in the charging of 549 persons, all of them adults.

During 1963, 67,133 Criminal Code offences under traffic enforcement laws were reported and 1,533,773 traffic offences under federal, provincial and municipal statutes. The former resulted in the charging of 47,706 males and 878 females. The number of motor vehicles stolen was 37,700, or 620.6 per 100,000 vehicles registered; 34,927 or 92.6 p.c. of these vehicles were recovered. The number of traffic accidents reported in 1963 was 539,110, of which 3,619 involved fatalities, 84,055 resulted in injuries, 276,048 involved property damage of over \$100 and 175,388 damage of \$100 or less. There were 4,261 persons killed in traffic accidents, including 2,938 drivers and passengers, 1,152 pedestrians, 134 cyclists and 37 others, and there were 121,989 persons injured.

During the year, the police were asked to locate 16,231 missing adults and 24,197 missing juveniles; 15,529 adults and 23,981 juveniles were found. The number of drownings reported by the police was 1,349.

CHAPTER X.—LAND USE AND RENEWABLE RESOURCE DEVELOPMENT*

CONSPECTUS

	PAGE		PAGE
SECTION 1. LAND RESOURCES.....	444	SECTION 3. FEDERAL AND PROVINCIAL CO- ORDINATING COMMITTEES.....	451
SECTION 2. FEDERAL AND FEDERAL-PROVIN- CIAL RESOURCE DEVELOPMENT LEGIS- LATION AND PROJECTS.....	446	SECTION 4. OTHER FEDERAL RESOURCE AGEN- CIES AND THEIR FEDERAL-PROVINCIAL PROGRAMS.....	452

*The interpretation of the symbols used in the tables throughout the Year Book
will be found on p. viii of this volume.*

Until recently, governmental policies relating to Canada's renewable natural resources were directed toward the promotion of settlement on agricultural land and the large-scale utilization of other renewable resources. As a consequence, individual choice and initiative by private citizens was the basis of most action relative to resource utilization, and government programs of resource management and regulation, with some important exceptions, were concerned mainly with the rights and duties of individuals. However, widespread technological changes, particularly in the agricultural and transportation industries, have taken place during the past few decades and there has been a strong trend toward the concentration of an increasing population in urban centres. These changes have been accompanied by a related change in the pattern of land use and such developments, together with evidence of a degree of wind and water erosion and other manifestations of neglect of suitable conservation practices, have indicated the need for considerable planned adjustment in rural areas. Also, the increasing complexity of social organization and the attendant trend toward public decisions respecting resource management and use, have implied the need for improved federal and provincial legislative-administrative organization relative to natural resources.

One of the most important responses to these needs was the "Resources for Tomorrow" Conference held in 1961 to permit examination of problems of resource use and of creating an organizational framework suited to the modern requirement for integrated, comprehensive resource-use planning for social and economic development. Subsequent to this conference, the Canadian Council of Resource Ministers, composed of one representative from each province and one from the Federal Government, was established to perform a similar function on a continuing basis. Previous federal investigations of significance concerned with the general problem of government organization for effective resource use were: the Senate of Canada Special Committee on Land Use, established in 1957 and continuing until 1963; the House of Commons Standing Committee on Mines, Forests and Waters; and the National Conference on Reconstruction, held in 1945. Notable among provincial government efforts along similar lines is the annual British Columbia resources conference.

*Prepared by D. F. Symington, Information-Education Consultant, Department of Forestry, Ottawa.

Constitutionally, administration and disposition of natural resources rests mainly with the provincial governments. Under the British North America Act, fisheries were under federal jurisdiction and the federal and provincial governments shared legislative authority with respect to agriculture, international and interprovincial waters, etc., with federal legislation taking precedence over provincial legislation should conflict arise; however, subsequent interpretations of the Act have established most aspects of control of resources as being matters of provincial jurisdiction. As well, in the years following Confederation certain provinces, by agreement, assumed varying degrees of responsibility for administering the fisheries legislation and other federal resources legislation. Within this general framework, the Federal Government has taken certain steps to establish a national resource policy, to co-ordinate the activity of the various federal departments concerned with resources and relevant social and economic problems, to undertake or share in research, and to provide initiative and financial assistance in the establishment of co-operative federal-provincial programs of resource adjustment and development; and provincial governments have moved significantly to accommodate their administrative structures to the need for integrated, planned resource adjustment and development. Aspects of this trend to accommodate legislative-administrative organization to emerging needs will be apparent in the following descriptions of federal and federal-provincial agencies and programs. In addition, a great number of wholly provincial programs have been instituted, which further illustrate the trend toward integration of activities in resource administration.

Federal participation in land and water conservation programs began before the turn of the present century; starting in 1877, this included the work of the now disbanded Department of the Interior in the field of surveying and development of water resources in Western Canada. Later, such programs included those conducted under the Prairie Farm Rehabilitation Act which was enacted in 1935 to aid in the rehabilitation of the drought-stricken areas of the prairies, the work on the eastern seaboard conducted under the Maritime Marshland Rehabilitation Act of 1948, water development projects undertaken under the terms of the Canada Water Conservation Assistance Act of 1953 and, most recently, the broad and comprehensive resource development program for all of Canada envisaged under the Agricultural Rehabilitation and Development Act of 1961. Over this period, many projects have been undertaken, both under these legislative measures and under the terms of reference of the federal and provincial government departments and agencies concerned with resource development. They vary in nature and scope but each has as its basic objective the more effective utilization of Canada's land and water resources and the provision of a greater degree of economic stability for the rural areas of the country.

Section 1 gives the currently available data on the land resources of Canada; Section 2 describes the above-mentioned resource development legislation and the results of the implementation of that legislation; Section 3 outlines the organization of the federal and provincial committees established to co-ordinate the work of departments concerned with natural resources; and Section 4 gives brief indication of the federal-provincial programs undertaken by other federal departments and agencies with the same concern.

Section 1.—Land Resources

Information currently available regarding Canada's vast land resources is shown in Table 1, where the land area is classified as occupied agricultural, forest and 'other' land, the latter including urban land, road allowances, grass and brush land and all waste land such as open muskeg, swamp and rock. The Department of Forestry estimates that about 48 p.c. of the land area of Canada is forested and, according to the Census of 1961, less than 8 p.c. is classed as occupied farm land. A great part of the 1,606,788 sq. miles of 'other' land is located in the Yukon and Northwest Territories which together have a land area of 1,458,784 sq. miles. The occupied farm land in these Territories is practically nil and the forest area is estimated at 275,800 sq. miles.

1.—Land Area classified as Occupied Agricultural or Forest, by Province

NOTE.—Figures for occupied agricultural land were obtained from the 1961 Census; areas of forest land were compiled by the Department of Forestry from estimates supplied by the Forestry Service in each province.

¹ Less than half a square mile.

² Areas incapable of producing crops of merchantable timber because of adverse climatic, soil or moisture conditions, and reserve forest lands for which no inventories are available.

³ Includes only occupied agricultural land (less forest woodland) plus productive forest land.

⁴ Includes all other land such as urban land, road allowances, grass and brush land and all waste land such as open muskeg, swamp and rock and also unclassified land.

⁵ Includes areas of recent burn, cut-over land plus Non-productive Forest Land plus Other Land.

On the basis of information now available, it is estimated that, in addition to the present arable land across the country, about 40,000,000 acres of virgin land can be used for arable crops if the need arises. However, most of these reserves will require clearing or reclamation measures before they can be used for agriculture. In addition to the present arable land and potential reserves, 55,000,000 to 60,000,000 acres are suitable for wild pasture.

As the Canada Land Inventory (p. 450) progresses, a great deal of detailed information will become available on the land resources of the country, their present utilization and their capability.

Section 2.—Federal and Federal-Provincial Resource Development Legislation and Projects

Prairie Farm Rehabilitation Act

The Prairie Farm Rehabilitation Act was passed in 1935 by the Parliament of Canada, to provide for the rehabilitation of areas subject to drought and wind erosion in Manitoba, Saskatchewan and Alberta. A 1937 amendment broadened its scope to include land utilization and resettlement, and a 1939 amendment removed the time-limit so that the Act might remain in force indefinitely.

As originally conceived, the Act provided for assistance in the conservation and reclamation of land and water resources in the southern plains area of the Prairie Provinces. In the main this has consisted of the establishment of community pastures on land sub-marginal for cereal crop production, and the conservation of runoff water by constructing dugouts and damming streams. More recently, the program has been extended to embrace the entire settled agricultural area of the Prairie Provinces and the Prairie Farm Rehabilitation Administration has been made responsible for the development of large-scale irrigation and reclamation projects being undertaken by the Government of Canada. The Administration has also been active in the initiating of the Agricultural Rehabilitation and Development Act program (p. 448) in the four western provinces and has taken over from the Research Branch of the federal Department of Agriculture the operation of the tree nurseries at Indian Head and Sutherland, Sask.

The PFRA is administered from its headquarters at Regina by a Director who is responsible to the Deputy Minister of Agriculture in Ottawa. The following is a résumé of current activities.

Water Development.—A major phase of PFRA activities is provision to farmers of engineering and financial assistance in the construction of individual farm, community and large-scale water storage and irrigation projects. Since 1935 assistance has been provided in the construction of more than 90,000 small dams and dugouts to supply water for livestock, irrigation and domestic use. The PFRA provides all engineering surveys required to plan and design such projects and pays a portion of the construction costs, usually about 50 p.c. but larger proportionately when two or more farmers act together to develop water resources. Applications for large water projects are considered individually by PFRA and if approved are constructed under an agreement between the Federal Government and the provincial or local government concerned; PFRA builds the projects and other government bodies operate them. Six irrigation projects in southern Saskatchewan are owned and operated by PFRA, as are the Bow River Irrigation Project northwest of Medicine Hat in Alberta, and the Predevelopment Irrigation Farm associated with the South Saskatchewan River Development Project near Outlook in Saskatchewan. The projects in southwestern Saskatchewan and in Alberta, originally developed as part of the Federal Government's resettlement and rehabilitation program, now serve 160,000 acres of land and provide direct benefits to about 1,000 farmers.

Four to eight million trees are distributed annually to prairie province farmers for farmstead and field shelterbelts; annual production of trees will be increased to 15,000,000.

Major Projects.—Where a special need exists, the costs of such projects are usually shared by the federal and provincial governments and PFRA provides engineering services and supervises construction. Examples of major projects undertaken are as follows.

St. Mary Irrigation Project.—The St. Mary Irrigation Project, jointly undertaken by the Federal Government and the Government of Alberta in 1946, is intended to provide water to irrigate 500,000 acres of land between Lethbridge and Medicine Hat. Three important international streams are involved—the St. Mary, the Belly and the Waterton Rivers. The Federal Government is responsible for construction of the main water storage and supply facilities, and the Alberta Government for the irrigation distribution system and agricultural development. A key structure, the St. Mary Dam, was completed in 1951; the diversion of the Belly River into the St. Mary Reservoir was completed in 1958; and the diversion of the Waterton River to the same reservoir via the Belly River Diversion is planned for completion in 1965. Present facilities extend irrigation to 296,000 acres of land, and the Waterton River water will irrigate the other 214,000 acres.

South Saskatchewan River Development Project.—In 1958 the Federal Government and the Government of Saskatchewan reached an agreement to begin construction on a large multi-purpose project which would enable better use to be made of the water resources of the South Saskatchewan River through irrigation, power development, urban water supply, recreational development and improved river control. The project includes the building of two dams—the major one between the towns of Outlook and Elbow and the other adjacent to the divide between the South Saskatchewan and Qu'Appelle Valleys. The cost of all construction associated with the creation of the reservoir will be shared by the federal and provincial governments at a ratio of three to one, the provincial share not to exceed \$25,000,000. The Federal Government provides all engineering, supervisory and administration requirements.

When completed, the project will provide water for the irrigation of about 500,000 acres between Elbow and the city of Saskatoon, and in the Qu'Appelle Valley. Power potential at the dams site is 475,000 kwh. The reservoir—140 miles long with a capacity of 8,000,000 acre-feet of water (usable storage of 2,750,000 acre-feet)—will cost an estimated \$100,000,000 to construct. The main dam—210 feet high and with an over-all length of 16,700 feet—will be the largest rolled-earth dam in Canada and one of the largest in the world. By the spring of 1965 expenditures on this project had amounted to \$77,000,000.

Northwest Escarpment and Interlake Reclamation Project.—By agreement between the Federal Government and the Manitoba Government, certain flood control and land reclamation projects may be jointly undertaken. Investigation and reclamation work has been done to overcome flooding and erosion problems in the Riding, Duck and Porcupine Mountain areas and the Whitemud watershed, consisting of stream channel improvement, dyking, stream bank erosion control and building cutoffs and diversions. However, since 1958, work has been mainly confined to studies in the Wilson Creek headwaters area, and to completion of the reclamation projects on the Fairford and Icelandic Rivers of the Interlake region.

Assiniboine River Reclamation Project.—Flooding problems along the Assiniboine River between Portage la Prairie and Headingley in Manitoba have, over the years, caused damage to farm land, buildings and other property. Flood protection work, which has been carried on for many years, has consisted mainly of dyke construction and channel improvement: however in 1962 an agreement was signed between the Governments of Canada and Manitoba for major flood control measures, including a large-scale flood control and water conservation reservoir on the Assiniboine River near Shellmouth, and the construction of a diversion canal near Portage la Prairie to carry Assiniboine River floodwaters to Lake Manitoba; construction of the main dam was well under way in 1965.

Community Pasture Program.—The conversion of submarginal land from cereal crop production to pasture has been considered one of the necessary adjustments in land use in the drier areas of the Prairie Provinces. The 1937 amendment of the Act enabled PFRA to withdraw such land from cultivation and assist farmers to move to better areas.

Since then, 75 pastures have been developed, comprising some 2,250,000 acres of land providing controlled summer grazing for 150,000 head of cattle owned by more than 7,500 patrons. Current pasture development under PFRA, and under the cost-sharing Agricultural Rehabilitation and Development Act program, is based on the need to diversify production as a means of improving the position of low income farmers.

Maritime Marshland Rehabilitation Act

The MMRA program was instituted in 1948 by federal legislation to assist Nova Scotia, New Brunswick and Prince Edward Island in preserving and developing tidal marshlands, mainly in the Bay of Fundy area. The Federal Government constructs the protective works and the provinces make arrangements with land owners, provide drainage ditches and encourage proper use of the land. In all, 123 areas totalling more than 81,000 acres have been protected by 250 miles of dyke and 437 aboteaux, or tidal dams.

One of the modern engineering techniques employed by the MMRA involves construction of large dam structures near the mouths of tidal rivers. These permanently reclaim the lands along such rivers, provide highway crossings and eliminate the continual change in stream-bed location which is characteristic of tidal rivers. The three major structures are: Shepody Dam, completed in 1955 at a total cost of \$1,573,000, provides protection of a permanent nature to some 5,500 acres of fertile marshland from saltwater flooding and has reduced maintenance costs to only a fraction of what they were; Annapolis River Dam, completed in 1960 at a total cost of \$2,500,000 (\$915,000 paid by the Province of Nova Scotia) is a multi-purpose project providing a much needed highway crossing and protection of about 4,300 acres of rich farm land from saltwater flooding; and Tantramar River Dam, completed in 1960 at a total cost of \$905,000 (\$201,000 paid by the Province of New Brunswick) protects about 18,000 acres of marshland from flooding and provides a crossing over the Tantramar River for the Trans-Canada Highway. Pre-construction work began on a combined causeway and dam across the Petitediac River at Moncton, N.B., the total cost of which is estimated at \$3,000,000; of this amount, the Federal Government share is \$800,000.

The conservation problems which were the original basis for the MMRA have been largely overcome and, since the inception of the Agricultural Rehabilitation and Development Act program in 1961, the MMRA Administration has functioned in part as a regional ARDA office, and at the request of the provinces has provided engineering assistance on soil and water conservation problems in many areas of the Maritime Provinces.

Canada Water Conservation Assistance Act

This Act was passed in 1953 to enable federal participation up to 37.5 p.c. of the cost of construction of dams and other major water conservation and control projects. To date (mid-1965) only Ontario has participated, its three projects being the Ausable River Conservation Program, the Upper Thames River Conservation Program and the Metropolitan Toronto and Region Conservation Program. The over-all cost is estimated at \$34,500,000, of which the Federal Government has agreed to provide a maximum of about \$13,000,000. To Mar. 31, 1965, the Federal Government had contributed \$4,342,000.

Agricultural Rehabilitation and Development Act

The Agricultural Rehabilitation and Development Act was proclaimed in June 1961 and is an important element in Canadian agricultural policy and renewable resources management policy at both national and provincial levels. The Act authorizes the Federal Government to enter into agreements with provincial governments for the joint undertaking of: (1) projects for the alternate use of lands classed as marginal or of low productivity; (2) projects for the development of income and employment opportunities in rural agricultural areas; (3) projects for the development and conservation of soil and

water resources; and (4) projects for research relative to the foregoing. Discussions with the provincial governments, beginning in 1961, resulted in the signing, by October 1962, of a general ARDA agreement between the Federal Government and all provincial governments. The General Agreement, operative until 1965, provided a more detailed interpretation of the Act and established an operating policy. The first Federal-Provincial conference on ARDA, held in November 1964, resulted in the acceptance of a new General Agreement to come into effect on Apr. 1, 1965, covering ARDA operations until 1970; the total federal contribution was raised from \$50,000,000 to \$125,000,000, and an additional \$50,000,000 Special Fund for Rural Economic Development was established to implement major projects that are part of comprehensive development programs in specially designated areas.

The ARDA legislation arose out of recognition of a national interest in achieving better land use, improving the viability of farm units which are at present uneconomic, and of improving income and employment opportunities in rural areas. In many rural areas of Canada, income and living standards are unacceptably low and present land use is faulty or inefficient. To some considerable degree these economic, social and conservation problems, which interact to produce an adverse effect on rural standard of life, arise from farm mechanization; the more efficient, highly mechanized farmers, with adequate land and operating capital, are able to maintain profitable farming operations notwithstanding a relatively low market price for farm produce and the operators of smaller, less mechanized farms are thereby placed at a severe disadvantage. As a result, the number of farms in Canada has decreased since 1931 from about three quarters of a million to fewer than half a million and the trend toward farm consolidation and abandonment is continuing.

The Agricultural Rehabilitation and Development Act is enabling legislation, intended to be complementary and supplementary to existing federal and provincial legislation in respect of renewable resources and rural social and economic development. It is intended to aid in the correlation and expansion of existing programs, and to fill substantial gaps where current programs do not meet present needs. It has been clearly recognized that, in addition to improved conservation and resource utilization and general economic stimulation, a social process of community development is essential—a process whereby local citizens organize to bring together local institutions and employ the technical counsel of university, professional and governmental agencies to study their physical and economic resources and the capabilities of the people; subsequently developing comprehensive economic and social plans to be implemented co-operatively by all levels of government and private organizations.

Under the ARDA program up to Mar. 31, 1965, 735 projects had been approved; their estimated sharable cost was \$64,477,000, of which the Federal Government portion was \$3,277,000. These included 211 alternate land-use projects, 207 soil and water conservation projects, 50 rural development projects, and 267 research projects. Federal commitments in respect of approved ARDA projects in each province were as follows:—

	\$
Newfoundland.....	1,080,000
Prince Edward Island.....	330,000
Nova Scotia.....	974,000
New Brunswick.....	755,000
Quebec.....	11,851,000
Ontario.....	2,672,000
Manitoba.....	3,741,000
Saskatchewan.....	7,304,000
Alberta.....	2,537,000
British Columbia.....	2,033,000

Additional solely federal ARDA expenditures totalled \$1,242,000.

Typical of the major federal-provincial projects of soil and water conservation and land-use projects under ARDA were: development of the Belmont community pasture in Prince Edward Island at a cost of \$110,000; land clearing for development of submarginal land for blueberry production in Roberval County in Quebec at a cost of \$207,000; acquisition of marginal land in seven counties of Ontario for forestry, wildlife and recreation at a cost of \$1,689,000; development of the Bechard flood control project in Saskatchewan at a cost of \$103,000; and rehabilitation of the Summerland Municipality irrigation system in British Columbia at a cost of \$150,000. Research programs vary from a simple study of types of looms suitable for cottage industry, costing \$1,000, to complex regional studies such as the inventory of natural resources and appraisal of socio-economic conditions in the Lower St. Lawrence Rural Development Region, costing \$1,700,000.

The Canada Land Inventory.—The Canada Land Inventory being co-ordinated by the ARDA Administration has been made possible by the extensive soil classification work undertaken in Canada over the past half-century. The co-operative Soil Surveys, which have been under way since 1935, are staffed by soil specialists of federal and provincial governments and universities and are supported by all senior governments.

For several decades the Soil Surveys have been classifying and mapping land according to its inherent characteristics. Most of the agricultural areas have been mapped at varying scales and degrees of intensity, and maps and reports have been published providing much fundamental information on Canadian soils. Although designed to meet the needs of the agricultural industry, the Surveys provide information that can often be used as a basis for assessment of the capability of land for various possible alternative uses. A second type of land classification, according to its present use, has been carried out over much of Canada, particularly by means of the land-use mapping program of the Geographical Branch of the federal Department of Mines and Technical Surveys which began in 1950. The Dominion Bureau of Statistics, the Economics Division of the Canada Department of Agriculture, and the statistical agencies of the provinces also provide information on the social and economic factors of land use.

The Canada Land Inventory carries out a third type of land classification—according to its assessed capability for different uses. Increasing competition for the use of land has led to recognition by governments of the need to assess land capability and apply this information to land-use policy and programs. On the basis of much fundamental work in classifying and mapping soils, gathering climatic data, studying present uses, and compiling statistics on productive capacity, it is now possible for scientists in the fields of agriculture, forestry, recreation and wildlife to rate the capability of land, employing classification systems that provide a basis for effective land-use planning in Canada. In October 1963, the Canada Land Inventory was approved as a means of accomplishing this; the Inventory is being planned and implemented co-operatively by the Federal Government and all provincial governments individually with the ARDA Administration functioning as co-ordinators. The Federal Government will reimburse each province for all additional costs it incurs in the conduct of the Inventory.

The broad objective of the Canada Land Inventory is to classify lands in and adjacent to the settled portions of Canada as to their use capabilities, and to obtain a firm estimate of the extent and location of each class. These lands are currently being classified according to: their physical capabilities for use in agriculture, forestry, recreation and wildlife management; their present use; and socio-economic factors relative to their present use. This vast amount of information is to be gathered, stored on computer tapes, analysed and published in such a way that the Inventory will become a working tool in resource use and rural development programs across Canada.

By 1965, the federal and provincial ARDA organizations had established co-ordination among the approximately 100 agencies of the 11 senior governments which are concerned with the Inventory, and with the numerous universities, non-governmental organizations and private companies and individuals who are participating in the Inventory.

Section 3.—Federal and Provincial Co-ordinating Committees

During the two-year period of preparation for the "Resources for Tomorrow" Conference of October 1961, the Federal Government and all provincial governments established interdepartmental committees of departments concerned with natural resources. Subsequent to the Conference, most of these committees continued—usually in an altered form—to meet the newly emerging need for co-ordination among departments for the implementation of the ARDA program. The committees are as follows.

Federal Government.—The Federal Interdepartmental Co-ordinating Committee, comprised of the Ministers of eight departments—Agriculture, Forestry, Fisheries, Finance, Labour, Industry, Citizenship and Immigration, and Northern Affairs and National Resources. The Interdepartmental Advisory Committee for ARDA, comprised of the Deputy Ministers of these Departments. In practice, co-ordination in detail is achieved through sub-committees or *ad hoc* committees.

Newfoundland.—ARDA Co-ordinating Committee, comprised of four Deputy Ministers of the resource departments and education.

Prince Edward Island.—The Ministerial Committee for ARDA, comprised of the Premier and Ministers of the resource and tourist development, education, and municipal affairs departments. The Deputy Ministerial Committee for ARDA, comprised of the Deputy Ministers of resource and education departments. County ARDA Committee.

Nova Scotia.—The Resources Development Co-ordinating Committee, comprised of four Deputy Ministers of the agriculture, municipal affairs, lands and forests and attorney general departments, and four senior officials. The Inter-departmental ARDA Committee, comprised of 21 senior officials of the resource, planning and social service departments, ARDA Departmental Committees of the departments of agriculture and lands and forests.

New Brunswick.—Provincial ARDA Committee, comprised of eight Deputy Ministers of the agriculture, lands and mines, fisheries, industry, labour, public works, municipal affairs and youth and welfare departments, the General Manager of the Electric Power Commission, an officer of the Research and Productivity Council, an economic adviser, and two federal officials as consultants.

Quebec.—An interdepartmental committee composed of five Ministers; the ARDA Administration; the Permanent Committee for Resource Development, composed of the Minister of Agriculture and Colonization and the Deputy Ministers of Agriculture and Colonization, Industry and Commerce, Natural Resources, Tourism, Fish and Game, Lands and Forests, and Municipal Affairs; the Economic Planning Council of Quebec, composed of five regular and five associate members selected from the senior officers of the government.

Ontario.—An ARDA Directorate established under the Agricultural Rehabilitation and Development Act of Ontario (1962-63) consists of ten Deputy Ministers or senior officers from seven departments and the University of Guelph. The Directorate reports to the Government of Ontario through the Minister of Agriculture.

Manitoba.—The Manitoba Development Authority is comprised of the Premier, four Ministers, five Deputy Ministers and an Executive Secretary. A Deputy Ministers' Committee on Rural Development and ARDA. A Technical Committee to carry out the instructions of the Deputy Ministers' Committee. Advisory Committees to the Deputy Ministers on Rural Development, Land Use and Soil and Water Conservation.

Saskatchewan.—The Committee on Agricultural and Renewable Resources Development, comprised of the Deputy Ministers of the Departments of Agriculture, Natural Resources, Municipal Affairs, and Education, and a representative of the Water Resources Commission. The Committee is chaired by the Secretary of the Economic Advisory and Planning Board.

Alberta.—The Alberta ARDA Co-ordinating Committee, comprised of the Deputy Ministers of four resource departments, the Director of Lands, and the ARDA Co-ordinator. The Alberta ARDA Advisory Committee, comprised of 14 senior provincial officials of various resource departments and two federal officials.

British Columbia.—The Ministerial Committee for ARDA, comprised of three Ministers representing five natural resources departments. Deputy Ministers Committee for ARDA, comprised of the Deputy Ministers of five resource departments.

Section 4.—Other Federal Resource Agencies and Their Federal-Provincial Programs

The Department of Northern Affairs and National Resources.—This Department engages in many diverse activities including administration of national parks, some of the aspects of water resources under federal jurisdiction, administration of the resources of the Yukon and Northwest Territories, wildlife administration (particularly the Migratory Birds Convention Act) and administration of other natural resources under federal jurisdiction. The Water Resources Branch, the National Parks Branch and the Northern Administration Branch, in particular, deal with natural resources and administer the federal-provincial agreements and programs, which are as follows. *Roads to Resources Agreements*: made with all provinces between 1958 and 1960, involve construction of access roads mainly to mining, lumbering and tourism areas; total federal expenditure to Mar. 31, 1965 was approximately \$59,000,000, matched by equal provincial expenditure. *Canada Water Conservation Assistance Act* (see p. 448). *Fraser River Board*: established in 1949 to study flood control, hydro development, etc. The Federal Government has spent about \$1,800,000 on research and other activities to date; British Columbia has spent a similar amount.* *Columbia River Agreements*: signed in 1963 and 1964 to define the rights and obligations to British Columbia under the Columbia River Treaty and related arrangements. *Prairie Provinces Water Board*: comprised of one member from each of the Prairie Provinces and two members from the Federal Government; its function is to recommend water allocation from interprovincial streams to each province. *Nelson River Investigation*: established in 1963 to study power sites on the river and the means of achieving their development. The Nelson River Programming Board and Administrative Committee, the former comprising three federal and three Manitoba members and the latter two members each, have completed preliminary engineering studies of power potential of the system at a cost, up to Mar. 31, 1965, of approximately \$1,281,000 to the Federal Government and a similar amount to Manitoba. *Greater Winnipeg Floodway Program*: an agreement with Manitoba in 1962 provides for the construction of a floodway for the Red River, to extend from St. Norbert past Lockport, at a cost to the Federal Government of nearly \$37,000,000 and a total cost of about \$63,000,000; \$15,461,000 had been spent by the Federal Government by 1965. *Ottawa River Engineering Board*: established to conduct joint hydrologic studies by the Federal Government, Ontario and Quebec of the storage and regulation possibilities in the Ottawa River Basin from the viewpoint of all interests affected, including uses for power, logging, navigation, municipal uses, etc. *Study of Flood Flows*: established in 1964 between Nova Scotia and the Federal Government for a one-year program to study the size, location and frequency of flood flows in Nova Scotia water-courses.† *Hydrometric and Sediment Survey*: beginning in the 1930's this program, varying between provinces, provides for sedimentation and hydrometric studies in most provinces. *Grand Rapids Habitat Study*: involves examination of the Moose Lake area of Manitoba on the effect of the Grand Rapids dam on wildlife habitat, particularly that of muskrat and migratory birds. *Fur Conservation Agreements*: established between the Federal Government‡ and Ontario, Manitoba and Saskatchewan for the construction of water control works to improve management of fur bearing animals, chiefly muskrat, in marsh-land areas. *Wildlife Inventory Program*: joint studies are carried out informally, e.g., the waterfowl inventory conducted by the Federal Government, the United States Fish and Wildlife Service, the Prairie Provinces and the Provinces of British Columbia, Ontario and Newfoundland, and the caribou inventory by the Federal Government and the governments of Saskatchewan, Manitoba, Quebec and Newfoundland. *Trans-Canada Highway*

*The Department of Fisheries is also a member of the Fraser River Board.

†The federal Department of Transport is also participating in this study.

‡The Indian Affairs Branch of the Department of Citizenship and Immigration is also involved in these agreements and works.

Campgrounds and Picnic Areas Program: established in 1958 between the Federal Government* and all provinces except Ontario and Quebec to provide improved tourist facilities, with the Federal Government sharing costs equally to a maximum of \$2,000,000; \$1,051,242 had been spent by 1965.

The Canada Department of Agriculture.—This Department is concerned with physical and economic research relative to the agricultural industry, grading and inspection, disease and pest control, soil and water conservation, marketing, farm credit and other related activities. Federal-provincial natural resources agreements administered by the Department, additional to certain PFRA and MMRA agreements, are as follows. *Soils Survey:* a cost-sharing program conducted co-operatively since 1935 with most of the provinces to classify soils according to their physical characteristics, to assess their usefulness for agriculture, and to publish the information in the form of maps and reports. A number of universities are actively involved in the program (see p. 450). *Lime Assistance Program:* an annual agreement applicable to British Columbia, Ontario, Quebec, New Brunswick, Nova Scotia, Prince Edward Island and Newfoundland, beginning in 1943, to reduce acidity of agricultural soils by application of limestone or other alkali material. Federal contributions have amounted to about \$18,354,000 since inception. *Land Clearing and Bogland Reclamation:* a joint federal-Newfoundland program to develop Newfoundland's extensive boglands and arable forest lands for crop and pasture use and for gardens. Since it began in 1953, the federal contribution has been \$1,425,000, matched by the province. This program is being carried forward under ARDA.

The Department also participates in the East Slope (Alberta) Watershed Research program, the Greater Winnipeg Floodway program, and the International Pembina River Engineering Board.†

The Department of Mines and Technical Surveys, the Atomic Energy Commission, the National Research Council and the Fisheries Research Board.—These departments and agencies, in co-operation with the Ontario Government, the federal Department of Fisheries, the University of Toronto, the United States National Science Foundation, and private sources, support the Great Lakes Institute in its comprehensive program of research on the Great Lakes fisheries problems and other relevant problems. The Institute, together with the international Great Lakes Fisheries Commission (relative to lamprey control), co-operates in work under an agreement made in 1960 between the Federal and Ontario Governments to fulfil the recommendations of the federal-provincial Great Lakes Fisheries Co-ordination Committee. The Federal Government conducts general fisheries research and lamprey research and control on Lake Superior, and economic and technological studies on all the Great Lakes. Ontario conducts general fisheries research on Lakes Huron, Erie and Ontario, collects data and does hydrographic work. A number of other federal, provincial and non-governmental agencies support the Institute in various ways. Co-ordination is achieved through the federal-provincial Committee for Ontario Fisheries.

The Department of Fisheries.—This Department is responsible for administration of the Fisheries Act which, by agreement with Alberta, Saskatchewan, Manitoba, Ontario and Quebec, is applied by provincial administrations of these provinces. The Department of Fisheries is the federal body which, with the research and co-ordination assistance of the Great Lakes Fisheries Institute, fulfils the federal commitments under the federal-Ontario agreement of 1960.

The Department of Transport and the Department of National Health and Welfare.—These departments extend assistance in various forms to provincial and municipal governments for the study and abatement of air pollution. They have, in

* The Department of Labour Winter Works Program is also involved in this program.

† The Department of Northern Affairs and National Resources participates in the East Slope and Pembina River programs; the Departments of Transport and Forestry also participate in the East Slope program.

co-operation with municipal and provincial organizations, established an air sampling network to collect data on pollutants in urban centres and correlate them with meteorological data.

The Department of Citizenship and Immigration.—In general, the federal-provincial agreements in which this Department participates concern wildlife as a factor in Indian income opportunities. The agreements include: the Sipanok Fur Area agreement, which is mainly concerned with muskrat production; the Fur Conservation Agreements with Ontario, Manitoba and Saskatchewan* under which several million dollars have been spent in joint conservation programs; the federal-Ontario resources management program for the Bruce Peninsula; a federal-Ontario agreement whereby the Ontario Government operates a fur farm on Akimiski Island of James Bay on behalf of the Northwest Territories Council and the Indian Affairs Branch; the Beckwith Island grouse study in Georgian Bay; and various projects for industrial development of resources (particularly fish) in the interest of Indian communities.

The Department of Forestry.—This Department is concerned primarily with promoting effective management of Canada's forest resources and improving wood utilization, and to these ends conducts comprehensive programs of research and undertakes, promotes and recommends measures to encourage application of desirable methods. In addition to the federal-provincial resource agreements under ARDA, the Department of Forestry is responsible for federal administration of joint programs as follows. *Composite Forestry Agreements:* beginning in 1951 and in 1960 provided for in the Department of Forestry Act, the agreements cover federal assistance in five areas of forestry—inventories, reforestation, fire protection, access roads and trails, and forest stand improvement. The annual allotment provided by the Federal Government is \$7,910,000, allocated between provinces according to a formula based on productive forest area. *Forest Stand Improvement Program:* established under federal-Nova Scotia agreement in 1961 for the improvement of Cape Breton Island forest stands and to provide employment for coal miners affected by mine closures. *Eastern Rockies Forest Conservation Area:* a 25-year federal-Alberta agreement beginning in 1947 and revised in 1951 and 1957 provided for conservation of 9,000 sq. miles of forest on the headwaters of the Bow, Crowsnest and Clearwater Rivers, to ensure maximum water flow in the Saskatchewan rivers. The Federal Government provided the capital costs of \$6,200,000, and the province maintains the projects. *Fire Protection Arrangements:* include federal-Alberta agreements for fire detection and suppression in the Rocky Mountains Forest Reserve and similarly on the boundary areas of Waterton Lakes, Banff, Jasper and Wood Buffalo National Parks. *Forest Research Agreements:* include federal-Ontario agreements for forest research, under an advisory committee composed of five federal and five provincial members, to develop experiments and test procedures; operation of the Forest Insect Laboratory at Sault Ste. Marie and the Forest Pathology Laboratory at Maple, Ont. *Budworm Spraying Program:* established in 1953 as a means of controlling spruce budworm infestation by a spraying program conducted by Forest Protection Ltd., a federal-provincial-industry organization composed of four pulp and paper companies, the Government of New Brunswick and the Federal Government. More than 24,000,000 acres have been sprayed at a total cost of over \$17,200,000, of which the Federal Government has contributed \$5,529,000.

* The Department of Northern Affairs and National Resources is also a party to this agreement.

Section 1.—Federal Government in Relation to Agriculture*

The federal Department of Agriculture dates from Confederation. It was established in 1867 as an outgrowth of a Bureau of Agriculture set up in 1852 by an Act of the Legislature of the Province of Canada. The Department derives its authority from the British North America Act, 1867, which states in part that "in each province, the legislature may make laws in relation to agriculture in the province" and that "the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the legislature of a province relative to agriculture, shall have effect in and for the province as long and as far as it is not repugnant to any Act of the Parliament of Canada".

A Department of Agriculture with a Minister of Agriculture at its head was accordingly established as part of the Government of Canada. Departments of Agriculture headed by provincial Ministers of Agriculture were also set up by the provincial governments, except in the Province of Newfoundland where agricultural affairs are dealt with by the Agricultural Division of the Department of Mines, Agriculture and Resources. The agricultural affairs of the Yukon and Northwest Territories are administered for the federal Government by the Territorial Division, Northern Administration Branch, Department of Northern Affairs and National Resources.

Subsection 1.—Services of the Canada Department of Agriculture

The activities of the Canada Department of Agriculture fall into three broad groups: research, promotional and regulatory services, and assistance programs. Research work is aimed at the solution of practical farm problems through the application of fundamental

* Prepared (July 1965) under the direction of S.C. Barry, Deputy Minister of Agriculture, Ottawa.

scientific research to all aspects of soil management and crop and animal production. Promotional and regulatory services are directed toward the prevention or eradication of crop and livestock pests and the registration of chemicals and other materials used to achieve that end and toward the inspection and grading of agricultural products and the establishment of sound policies for crop and livestock improvement. Assistance programs cover some of the sphere of soil and water conservation, price stability, provision of credit, rural rehabilitation and development, and crop insurance and income security in the event of crop failure.

The Department has four main Branches—Research, Health of Animals, Economics, and Production and Marketing—and its organization includes a number of smaller units—the Agricultural Stabilization Board (see p. 461), the Agricultural Products Board, the Prairie Farm Rehabilitation Administration (p. 446), Crop Insurance (p. 462), the Information Division and Departmental Administration. Agencies closely allied with the Department and responsible to the Minister of Agriculture are the Farm Credit Corporation (p. 464) and the Board of Grain Commissioners (see Part II of Chapter XXI).

The work of the Research Branch and the research activities of the Health of Animals and Economics Branches are outlined in the special article "Contribution of the Canada Department of Agriculture to Modern Agricultural Science", on pp. 457-461. Other functions of the Health of Animals and Economics Branches and the activities of the Production and Marketing Branch, the Information Division and Departmental Administration are as follows.

Health of Animals Branch.—This Branch administers the Animal Contagious Diseases Act, the Meat Inspection Act and the Humane Slaughter of Food Animals Act, and operates laboratories for the study of animal diseases. Contagious diseases of animals are controlled through preventive measures of inspection and quarantine of imported livestock and restricted commodities such as meat, farm products and other possible sources of infection; through conducting disease eradication programs, notably of bovine tuberculosis, brucellosis and Johne's disease; through the control and eradication of serious animal diseases when outbreaks occur; and through inspection and certification as to health of livestock for export. The Meat Inspection Division conducts ante-mortem and continuous post-mortem examination of animals slaughtered at packing plants that market their meat products outside of the province in which they operate, ensures maintenance of sanitary standards during processing of the products, accurate labelling, and proper kind and use of ingredients and preservatives. The Division ensures, also, in these plants that the animals are slaughtered in a humane manner. Animal pathology laboratories across the country, in addition to their research function (see p. 458), manufacture diagnostic reagents and biological products and provide analytical and diagnostic services for diseases of domestic and wild animals and for determination of the soundness of meat food products.

Economics Branch.—This Branch collects, analyses and interprets economic information needed to formulate and administer departmental programs and policies and does intelligence and research work (see p. 458) designed to increase efficiency in agricultural production and marketing and to guide farmers in making needed adjustments in farm organization and operation. It acts as an economic and statistical research agency for the Agricultural Stabilization Board, the Prairie Farm Rehabilitation Administration and other bodies, and assists in any economic undertakings with which the Department is concerned. The Branch is also closely associated with the work of the Food and Agriculture Organization of the United Nations, the UN/FAO World Food Program, the General Agreement on Tariffs and Trade, and the Directorate of Agriculture of the Organization for Economic Co-operation and Development.

Production and Marketing Branch.—The Production and Marketing Branch conducts many of the promotional and regulatory functions of the Department. Six specialized divisions administer legislation and policies in the production and marketing of

livestock, poultry, fruits and vegetables, dairy products and plant products, and policies in connection with the control of disease in plants. A General Service Division supplements and complements the specialized divisions in matters of common concern.

The *Livestock Division* administers legislation dealing with the grading of meat, wool and fur, with the registration of livestock pedigrees, with performance testing of cattle and hogs and with the supervision of racetrack betting. Other activities include the promotion of livestock improvement and the compilation of market statistics. The *Poultry Division* carries out the policies of the national poultry breeding program, including Record of Performance for poultry and hatchery inspection, and administers the regulations for the grading of poultry products. The *Fruit and Vegetable Division* administers legislation having to do with the grading of fruits and vegetables in both fresh and processed form, maple products and honey. The Division is responsible for the licensing of interprovincial and international dealers and brokers who deal in fresh fruits and vegetables. The *Dairy Products Division* administers the Cheese Factory Improvement Act and legislation covering grades and standards for dairy products, including butter, cheese, concentrated milk products and ice cream. The *Plant Products Division* administers Acts and regulations respecting seeds, feedstuffs, fertilizers and pest-control products, conducts field inspections and maintains regional testing laboratories. The *Plant Protection Division* is responsible, under the Destructive Insect and Pest Act, for safeguarding against the introduction of serious plant insects or diseases into Canada or their spread in Canada, for certifying freedom from disease and pests in plant exports, and for seed potato certification.

The *General Service Division*, through its *Inspection Service*, maintains inspectors in the principal marketing areas to make spot checks on retail outlets to see that food products meet prescribed standards of quality and grade. Cargo inspectors at the main Canadian ports check the handling of goods moving to export markets. A *Subsidies Section* administers the payment of subsidies for the construction of public cold storage facilities. This Division also provides management assistance and administrative services to the *Markets Information Section* which compiles and distributes market information respecting livestock, meat and wool, dairy products, eggs and poultry, and fruits and vegetables; and the *Consumer Service Section* which co-operates with the commodity divisions in developing the market for Canadian foods and in interpreting the grading and inspection regulations to the general public.

Information Division and Departmental Administration.—The Information Division gathers and publishes information arising from research work and the development of regulatory programs of the Department. Publication is through the printed word, press and radio releases, motion pictures, television and exhibits. The general business management of the Department is undertaken by the Departmental Administration, the duties of which also embrace Emergency Measures Planning and the Departmental Library; the main emphasis of the Library's collection is, of course, on agriculture but extends also to the life sciences.

CONTRIBUTION OF THE CANADA DEPARTMENT OF AGRICULTURE TO MODERN AGRICULTURAL SCIENCE*

Before World War II, each farm worker in Canada produced enough food to feed ten people; each now feeds 32, and Canadians spend a smaller percentage of their take-home pay on food than other comparably developed Western nations. Much of this increased efficiency of Canadian agriculture may be attributed to the contribution of research, and the Canada Department of Agriculture (CDA) carries out about 70 p.c. of the agricultural research in Canada, the remainder being done by universities, provincial governments and private industry.

* Prepared in the Information Division, Canada Department of Agriculture, Ottawa.

Federal Agricultural Research Organization.—CDA research activities are undertaken mainly by the Research Branch at some sixty centres across the country, although important contributions are also made by the Economics Branch, the Health of Animals Branch and the Grain Research Laboratory operated by the Board of Grain Commissioners for Canada. About 1,000 research workers are employed by the Department and their specialties run the gamut of scientific agriculture from genetics to engineering.

The bulk of the research is directed from *Research Branch* executive headquarters at the Central Experimental Farm in Ottawa. Also located there are the statistical, engineering and analytical chemistry research services, together with six of the eight institutes for research on animals, food, entomology, microbiology, plants, soils, biological control, and pesticides. Throughout the ten provinces there are 13 research stations, 27 experimental farms, a laboratory and a number of substations.

Originally, the main task of the experimental farms was to determine the potential of the various combinations of soil and climate for producing crops and maintaining livestock, and to develop and test varieties, breeds and management practices suitable for each area. Today's federal research program continues with this early work but is designed to meet new problems, including tailoring agricultural products to meet the specific needs of domestic and export markets. The accent is on promoting greater efficiency in production and diversification of cropping practices.

Research and advisory services on economic matters affecting agriculture are performed by the *Economics Branch* with the object of increasing efficiency in agricultural production and marketing and of facilitating the adjustment of farming operations to changing situations and thereby improving farm income and living conditions. Research is undertaken to assist farmers in the management of their farms and to provide information for use by the government in the development of agricultural policies. With respect to farm production, studies are carried out on the use and management of land, water, human and capital resources in agriculture, on the financing of farming operations, agricultural insurance, agricultural adjustments, farm income and expenditures, and farm efficiency. In the marketing and trade area, studies are undertaken to increase marketing efficiency, to improve agriculture's position in international trade and to assist in carrying out the agricultural stabilization program. Such studies include short-term and long-term forecasts of demand and supply, market structure and potential and alternative trading arrangements.

The Animal Pathology Division of the *Health of Animals Branch* consists of the Animal Diseases Research Institute at Hull, Que., the Animal Diseases Research Institute (Western) at Lethbridge, Alta., and seven branch laboratories. The Division conducts research and investigations on infectious diseases of animals and produces such products as tuberculin, johnin and mallein, *Brucella abortus* antigen, for the use of the Health of Animals Branch in the control and elimination of tuberculosis, brucellosis, etc. The Division provides a diagnostic service to the other Divisions of the Branch and to the livestock industry in general, and conducts a training program for departmental officers and veterinarians from other lands.

Division research is, in the main, for findings that can be applied in the control and elimination of disease, for example, the development of precise and rapid diagnosis. Tests have been developed that enable the Division to diagnose hog cholera within a matter of a few hours after receiving specimens, thus permitting the immediate implementation of control measures. This is a far cry from older methods that took from seven to 14 days and sometimes as long as a month. In addition, the diagnostic service facilitates the export of livestock to other countries; to satisfy the health requirements of countries trading with Canada, the laboratories test for brucellosis, leptospirosis (as many as 12 serotypes), vibriosis, trichomoniasis and other infectious diseases. Imported animals are also tested for the presence of infectious diseases. Another service of importance to the livestock

industry is the exhaustive check made on biological and other products that are offered for sale for veterinary and agricultural use, to ascertain that the products will be effective for the purposes intended and that the disease or diseases which they are supposed to prevent or treat actually do occur in Canada.

The *Grain Research Laboratory* provides scientific services required in the administration of the Canada Grain Act. It carries out annual studies of the quality of the new crop cereals, maintains a continuous check of the quality of cereal grains as they move forward from the farm to marketing positions and plays a major role in testing (prior to licensing) the quality of plant breeders' varieties of various cereals. A comprehensive program of basic and applied research relating to the quality of Canadian cereal grains is an important task of the Laboratory.

Improvement of Crops.—Canada's main crop for generations has been wheat, of which 723,000,000 bu. were grown in 1963 and 600,000,000 bu. in 1964. The efficiency of high-quality wheat production in this country stems directly from the help the grain growers have received from research. Without the new varieties produced by plant breeding, it would be unprofitable to grow wheat on large areas of the wheat belt. Rust-resistant wheats prevented the loss of an estimated 250,000,000 bu. in 1962 alone and varieties resistant to sawfly have prevented substantial losses almost every year. Comparable improvements in oats and barley have enabled the farmer to continue to grow these valuable cereals despite the incidence of pests and diseases, drought and short growing seasons.

Because of the contribution of livestock returns to farm incomes in all provinces, it also became imperative to seek better grasses and legumes and to adapt them to the various regions of Canada that differ in climatic and soil conditions. Some success is being confirmed in many of the varieties advanced for this purpose but the impact of Climax timothy on forage crop production in the past decade deserves special mention. Developed by the CDA, Climax grows in all provinces and yields about 12 p.c. more forage than commercial timothy, long the chief grass of Eastern Canada. It is estimated that the increased tonnage and higher quality of Climax is worth about \$5,000,000 a year to Eastern Canada farmers.

Research in other crops, notably oil seed plants and potatoes, has resulted in new varieties with resistance to diseases, with improved quality and suitability for specific processing, and adapted to the different growing areas.

Investigation into the storage and processing of crops has been accelerated in recent years and has led to valuable innovations in the fruit and vegetable industries, and in the protection of stored grain. Technological improvements have been made in the harvesting and storage of tobacco; while the search for answers to perplexing problems, such as "weather fleck" and the use of chemicals for sucker control, continues to be pressed, tobacco growing has been introduced successfully into completely new areas of Eastern Canada in recent years. Some soybean varieties now widely grown have emerged from Canadian research. Wilt, rust pasmo disease, lodging and late maturity are some of the posers that have been mastered in flax. Plant breeders are helping to establish rape as a valuable oilseed crop and, on a smaller scale, safflower and sunflower crops for edible uses. More than 80 new varieties of crops have been developed and put into commercial production in the past five years.

In livestock, the main lines of progress are through genetics and nutrition and the main subjects are dairy and beef cattle, pigs, poultry and sheep. The advantages of selective breeding have been evidenced through the records of animals tested for many years. CDA itself developed a new breed of hog, the Lacombe, which is proving a worthy addition to the old-time breeds. Romnelet, a range-type sheep, was also an outcome of federal breeding programs. Crosses of several meat-type strains of chickens made at federal institutions have led to performance superior to that of pure strains.

Enlightened breeding, feeding and management practices have been responsible for substantial increases in yields of milk per cow and in the egg production of the national poultry flock. Beef cattle, hogs, and turkey and chicken broilers are being brought to market weight earlier as producers take advantage of scientific feeding. Livestock rations may now include vitamins, minerals and antibiotics for pigs and poultry, and stilbestrol for beef steers, which are combined with proteins and other elements to promote more efficient utilization of feed. It has been estimated that if these improvements were applied to all the current volume of feed, 1,000,000 market pigs, 300,000 market cattle and 43,000,000 doz. eggs would be added to annual production.

Extensive studies on the causes and control of diseases and parasites of livestock, fur bearing animals and wildlife are carried on with the result that epidemic outbreaks rarely occur and when they do are quickly suppressed. Live animals and meats must attain the high standards required in the export trade.

A matter of constant concern is the protection of crops from diseases and pests. Chemicals have proved to be potent control weapons. More than 24,500,000 acres were sprayed in 1964 to control weeds. About \$14,600,000 worth of herbicides were sold and an equal amount was spent on other chemicals for control of insects and diseases. Extensive research must be carried on constantly to assure the proper application of these chemicals, so that plant and animal produce is safe for human food.

There is also a continuing search for other methods of control. Many weeds can be eradicated by proper tillage and cropping methods. A few have been controlled by insects which feed on them exclusively and destroy them. Fungus diseases may be checked by developing resistant varieties of crops. In biological control, parasites or predators are produced and released to prey on certain insects and eliminate them. Sterilization of male insects by radiation or chemical means is another method of reducing insects of various kinds.

An area of special interest is that of farm mechanization in which there has been tremendous development in the past sixty years. Census figures show farm machinery valued at \$108,666,000 in 1901, \$596,046,000 in 1941, \$1,933,312,000 in 1951 and \$2,568,632,000 in 1961. The value has increased over nineteen times in the period and the greatly increased use of constantly improving machinery has had a profound effect on farm management, both physically and economically. The Research Branch is taking steps to expand its studies of mechanization at the Engineering Research Service in Ottawa and in the Maritime Provinces and universities are being encouraged to study the subject more intensively.

Soil surveys are conducted in all provinces in Canada in co-operation with provincial departments of agriculture and the universities. Soils are examined and classified as to their chemical and physical characteristics and potential productivity. This information is of inestimable value in setting up land uses under the Agricultural Rehabilitation and Development Act administered by the Department of Forestry. Soil fertility continues to receive attention on a national basis and is under study at all experimental farms and at many research stations. The Research Branch also co-operates very closely with the universities in this national project.

Agrometeorology, a relatively new discipline, is opening new opportunities to growers to make the most use of the heat, light and moisture available in each farm area.

As previously stated, while most agricultural research in Canada is carried out by the CDA, important programs are also undertaken by the provincial governments and agricultural colleges. Close liaison exists between these different agencies to avoid duplication and to ensure that the services offered by the Federal Government through provincial extension officers is of the kind farmers need. Federal research establishments across the country are represented on provincial committees concerned with field crop varieties,

fertilizer practices, soil fertility, spray programs, field crop and animal management, and horticulture. Such collaboration ensures that new practices discovered by research are brought quickly to the attention of extension groups to recommend for local use.

Subsection 2.—Farm Assistance Programs

Basic to the concept of Canada's national agricultural policy is the premise that a stable agriculture is in the interests of the national economy and that farmers as a group are entitled to a fair share of the national income. In pursuit of these objectives, the Department of Agriculture has carried on, over a long period, a program designed to aid agriculture through the application of scientific research and the encouragement of improved methods of production and marketing. Over the years, as conditions have warranted, programs have been initiated to deal with special situations such as the Prairie Farm Rehabilitation Act (see p. 446) to deal with the results of the drought in the 1930's; the Prairie Farm Assistance Act (p. 466) to mitigate the effects of crop failure; Feed Grain Assistance Regulations (p. 466) to assist in the movement of western feed grains to Eastern Canada and British Columbia; and the Maritime Marshland Rehabilitation Act (p. 448) to save valuable soil in the Maritime Provinces.

Although much has been accomplished and is still being accomplished by these measures, changes since World War II have dictated a new approach to some problems. Large-scale mechanization was the sequel to the reduction of manpower available to farmers; the number of farms declined but the size of farms increased; marketing and income problems took different forms. Legislation enacted to meet these situations include price support (Agricultural Stabilization Act), crop insurance (Crop Insurance Act), resource development (Agricultural Rehabilitation and Development Act) and credit facilities (Farm Improvement Loans Act, Prairie Grain Advance Payments Act, Farm Credit Act and Farm Machinery Syndicates Credit Act). These measures, with the exception of the Agricultural Rehabilitation and Development Act, (see pp. 448-450), are described individually below.

Agricultural Stabilization Act.—The Agricultural Stabilization Act (SC 1958, c. 22, proclaimed Mar. 3, 1958) established the Agricultural Stabilization Board and repealed the Agricultural Prices Support Act, 1944. The Board is empowered to stabilize the prices of agricultural products in order to assist the agricultural industry in realizing fair returns for labour and investment, and to maintain a fair relationship between prices received by farmers and the costs of goods and services that they buy.

The Act provides that, for each production year, the Board must support, at not less than 80 p.c. of the previous ten-year average market or base price, the prices of nine commodities (cattle, hogs and sheep; butter, cheese and eggs; and wheat, oats and barley produced outside the prairie areas as defined in the Canadian Wheat Board Act). Other commodities may be supported at such percentage of the base price as may be approved by the Governor in Council. Since the Act came into force, the following farm products, other than the nine named commodities, have been supported at one time or another: honey, potatoes, soybeans, sunflower seeds, sugar beets, tobacco, turkeys, apples, peaches, sour cherries, apricots, raspberries, asparagus, tomatoes, milk for manufacturing and skim milk powder. The Board may stabilize the price of any product by an offer-to-purchase, by a deficiency payment or by making such payment for the benefit of producers as may be authorized.

In stabilizing prices of certain commodities by means of deficiency payments, the price stabilization program has been assisting the agricultural industry to make production adjustments from a position of excessive supply to one of more normal relationship between supply and demand. The institution of limited deficiency payments by the Board assists in the adjustment of production in a relatively short time. During the period of adjustment, the Board guarantees a minimum average return to producers for a limited quantity of product.

During the seven fiscal years that the Act was in operation prior to Mar. 31, 1965, the cost of stabilization programs averaged \$57,000,000 a year. The Board has available a revolving fund of \$250,000,000. Losses incurred are made up by Parliamentary appropriations and any surplus is paid back to the Consolidated Revenue Fund. An Advisory Committee named by the Minister of Agriculture and composed of farmers or representatives of farm organizations assists the Board in its operations.

Crop Insurance Act.—To assist in making the benefits of insurance protection on crops available in all provinces, the Crop Insurance Act was passed in 1959. This Act does not set up any specific insurance scheme but rather permits the Federal Government to assist the provinces to do so by making direct contributions toward the cost of providing crop insurance. The initiative for establishing schemes to meet their own regional requirements rests with the provinces. Schemes may be organized on the basis of specific crops or areas within the provinces and agreements between the provinces and the Federal Government set out the terms of insurance coverage. By the end of May 1964, crop insurance legislation had been passed by Manitoba, Saskatchewan, Prince Edward Island, Nova Scotia and Alberta.

Contributions from the federal treasury are limited to 50 p.c. of the administrative costs incurred by a province and 20 p.c. of the amount of premiums paid in any one year. In addition, the Federal Government may make loans to any province equal to 75 p.c. of the amount by which indemnities required to be paid under policies of insurance exceed the aggregate of the premium receipts for that year, the reserve for the payment of indemnities, and \$200,000. As an alternative to such loans, the Federal Government in 1964 amended the Act to enable it to re-insure a major portion of the provincial risk in a program taken out under the Crop Insurance Act. Farmers insured under the Act are not eligible for payments under the Prairie Farm Assistance Act, nor are they required to pay the 1-p.c. levy on grain sales as provided for under that Act.

In 1964, 8,655 farmers received coverage under the Act for a total of \$18,713,000.

Farm Improvement Loans Act.—The Farm Improvement Loans Act (RSC 1952, c. 110), administered by the Department of Finance, is designed to provide credit by way of loans made by the chartered banks to assist in almost every conceivable purchase or project for the improvement or development of a farm and includes the purchase of agricultural implements, the purchase of livestock, the purchase and installation of agricultural equipment or a farm electrical system, the erection or construction of fencing or works for drainage on a farm, and the construction, repair or alteration of farm buildings including the family dwelling. Credit is provided on security related to the purchase or project and on terms suited to the individual borrower.

The legislation, originally operative for three years (1945-48), has been continuous by way of extensions usually for three-year periods. The latest extension was for the period July 1, 1965 to June 30, 1968. The maximum term of a loan and the interest rate remain at ten years and 5 p.c. simple interest, respectively. The borrower is required to provide from 10 p.c. to 33½ p.c. of the cost of his purchase or project, depending on the loan category to which it belongs. The Federal Government guarantees each bank against loss sustained by it up to an amount equal to 10 p.c. of loans granted by it in a lending period. This guarantee does not apply to any loan made after the aggregate of all loans made by all banks in a given period reaches an amount fixed by statute. The current maximum stands at \$700,000,000. By Dec. 31, 1964, 2,675 claims amounting to \$1,892,03 had been paid under the guarantee since the inception of the Act, representing a net loss ratio of less than one tenth of one per cent after recoveries have been taken into account.

By the end of 1964, \$1,253,743,699 or 82.1 p.c. of the total loans made had been repaid. The position at that time was as follows:—

<i>Period</i>	<i>Loans Made</i>	<i>Repayments¹</i>	<i>Balance Outstanding</i>
	\$	\$	\$

Prairie Grain Advance Payments Act.—This Act, which came into force on Nov. 25, 1957, provides for an interest-free advance payment to producers for threshed grain (wheat, oats, and barley) in storage other than in an elevator and prior to delivery to the Canadian Wheat Board, exclusive of grain deliverable under a unit quota. Advance payments of 50 cents per bu. of wheat, 20 cents per bu. of oats and 35 cents per bu. of barley are made, subject to certain restrictions as to quota and acreage. Maximum advance payment per application is \$3,000. At July 31, 1965, the following advance payments had been made:—

<i>Period</i>	<i>Applications</i>	<i>Total Advance</i>	<i>Average Advance</i>
	No.	\$	\$
Aug. 1, 1957 — July 31, 1958.....	50,412	35,203,467	698
Aug. 1, 1958 — July 31, 1959.....	45,341	34,369,653	758
Aug. 1, 1959 — July 31, 1960.....	50,047	38,492,505	769
Aug. 1, 1960 — July 31, 1961.....	76,089	63,912,550	839
Aug. 1, 1961 — July 31, 1962.....	22,342	16,656,713	745
Aug. 1, 1962 — July 31, 1963.....	39,683	29,251,526	737
Aug. 1, 1963 — July 31, 1964.....	63,427	62,136,418	980
Aug. 1, 1964 — July 31, 1965.....	38,375	32,961,844	859

Repayment is effected by deducting 50 p.c. of the initial payment for all grain delivered subsequent to the loan, other than for grain delivered under a unit quota. The amounts deducted are paid to the Board until the producer has discharged his advance. At July 31, 1965, refunds had been made as follows:—

<i>Period</i>	<i>Total Refunded</i>	<i>Total Advance Outstanding</i>	<i>Percentage Refunded</i>

Farm Credit Act.—The Farm Credit Act (SC 1959, c. 43, proclaimed on Oct. 5, 1959) established the Farm Credit Corporation as successor to the Canadian Farm Loan Board established in 1929. The Corporation, which is a Crown agency, reports to Parliament through the Minister of Agriculture.

The Act provides two types of long-term mortgage loans for farmers. Under Part II of the Act the Corporation may lend up to 75 p.c. of the appraised value of the farm land and buildings taken as security, or \$40,000, whichever is the lesser. Under Part III the Corporation may lend 75 p.c. of the appraised value of the farm land and buildings and of the livestock and equipment taken as security, or \$55,000, whichever is the lesser. To qualify for a loan under Part III a farmer must be under 45 years of age and have had at least five years of farming experience. Part III loans are further secured by mandatory insurance on the life of the borrower, and his farming operations are subject to supervision by the Corporation until the loan is reduced to 75 p.c. of the appraised value of the farm land and buildings. Similar life insurance and supervision are available on an optional basis to borrowers under Part II.

The interest rate on the first \$20,000 borrowed under Part II or the first \$27,500 under Part III is set by statute at 5 p.c. On that part of the loan which exceeds these amounts the interest rate is set by the Corporation with the approval of the Governor in Council. This rate can vary according to the interest rate on money borrowed by the Corporation, the operating costs of the Corporation and the allowance made for reserves against capital losses. The interest rate on the amount of loan under Part II exceeding \$20,000 and the amount under Part III exceeding \$27,500 is, at present, 6½ p.c. All loans are repayable on an amortized basis within a period not exceeding 30 years.

The Corporation has 126 field offices administered by 191 credit advisers who are responsible for informing local farmers about the services available, for pre-loan counselling on credit use, farm planning and farm management, for accepting applications and for making farm appraisals.

Funds for lending are borrowed at current interest rates from the Minister of Finance. The aggregate amount of such borrowings outstanding at any time may not exceed 2 times the capital of the Corporation, which has been fixed by the Act at \$24,000,000.

In the year ended Mar. 31, 1965, the Farm Credit Corporation approved 10,142 loans for a total of \$154,813,900 as compared with 8,689 loans for a total of \$108,009,100 the preceding year; the total amount of principal outstanding on loans was \$443,560,275 as compared with \$341,169,139 the previous year.

Farm Machinery Syndicates Credit Act.—The Farm Machinery Syndicates Credit Act (1964, c.29, proclaimed on Dec. 11, 1964) provides the Farm Credit Corporation with authority to make loans to qualified groups of farmers (referred to as syndicates) to purchase farm machinery to be used co-operatively and primarily on the syndicate members' farms. Under this Act the Corporation may lend a syndicate up to 80 p.c. of the cost of the machinery to be purchased but loans outstanding to any syndicate may not exceed \$15,000 per member or \$100,000. Funds are advanced to the Corporation by the Minister of Finance for the purpose of making loans under this Act.

To qualify for a loan a syndicate must have three or more members, all of whom are farming and the majority of whom have farming as their principal occupation. Loans are repayable over a term not exceeding seven years. Security is provided by a promissory note signed by each syndicate member and such other security as the Corporation may require.

The interest rate, set by the Corporation with the approval of the Governor in Council, is based on the cost of funds to the Corporation, the expenses in servicing loans and an allowance for a reasonable reserve against losses. The rate was set at 6 p.c. in December 1964. There is an initial service charge of 1 p.c. on the amount of each loan. The Corporation's field staff provide assistance to groups of farmers in making their local arrangements with respect to sharing in the use of the machinery and repayment of the loan.

At Mar. 31, 1965, loans had been approved for 22 syndicates with 81 members. The total amount approved was \$215,404.

Prairie Farm Assistance Act.—The Prairie Farm Assistance Act, passed in 1939, provides for direct money payments by the Federal Government on an acreage-and-yield basis to farmers in areas of low crop yield in the Prairie Provinces and in the Peace River area of British Columbia. Its purpose is to assist in dealing with a relief problem which the provinces and municipalities cannot do alone and to enable the farmers to put in a crop the following year. Payments for the 1964-65 crop year, as at July 31, 1965, totalled \$12,924,342; payments made under the Act since 1939 amounted to \$353,016,572.

Payments are made from the Prairie Farm Emergency Fund to which farmers contribute 1 p.c. of the value of all sales of wheat, oats, barley, rye, flaxseed and rapeseed. The additional funds required are provided from the federal treasury. The total collected through the 1-p.c. levy in the 1964-65 crop year, as at July 31, 1965, was \$9,189,011; the amount collected since 1939 was \$162,632,434.

Farmers operating land in the spring wheat area, and not covered by a federal-provincial crop insurance scheme, are eligible for awards. Crop failure and natural causes preventing seeding and summer fallowing are taken into account in making awards. These may not exceed \$800 in respect of any one farmer's total cultivated acreage.

Feed Grain Assistance.—The activities of the Feed Grain Administration of the Department of Forestry include the administration of a program respecting freight and storage assistance on western Canadian feed grains used for feeding livestock in Eastern Canada and British Columbia. Under authority of the Feed Grain Assistance Regulations of the Appropriations Act, the original policy was initiated in October 1941 to enable eastern Canadian feeders of livestock and poultry to obtain western-grown feed grains at reduced cost so that livestock and poultry production could be maintained at a high level. This program has been amended over the years but particularly in the past two years with the introduction of a storage assistance program on winter supplies in Eastern Canada, freight assistance on truck movements of grain and feeds in Eastern Canada, and the introduction of a zone system of payment. Order in Council P.C. 1963, effective June 21, 1965, calls for payment of storage charges on winter storage vessels at eastern ports in the amount of three cents per bushel.

During the year ended Mar. 31, 1965, \$18,246,389 was spent on the freight assistance program to move 2,298,051 tons of feed grains and millfeeds into Eastern Canada and British Columbia, and \$1,033,201 was spent in the payment of storage charges on western feed grains in store in Eastern Canada. Freight-assisted shipments, by province of destination, during the year ended Mar. 31, 1965 were:—

³ Includes 1,307 tons

Section 2.—Provincial Governments in Relation to Agriculture*

Subsection 1.—Agricultural Services

Newfoundland.—Government agricultural services in Newfoundland are operated by the Agricultural Division of the Department of Mines, Agriculture and Resources. The Division is in charge of a director who is assisted by a staff of 49 officers. For purposes of administration, the province is divided into nine districts. A fieldman with permanent headquarters is located in each district except Labrador, where the officer is resident for the summer only. Officers in charge of different phases of agricultural development visit each district on assignments from the St. John's office.

Departmental policies in support of the agricultural industry include: a bonus of \$125 an acre on land cleared by privately owned equipment; the distribution of ground limestone at a subsidized rate; the payment of bonuses on purebred sires; and financial assistance to agricultural societies, marketing organizations and exhibition committees. An inspection service is provided for poultry products, vegetables and blueberries, production of the latter being encouraged by the burning of suitable berry areas and the improvement of roads and trails leading to them.

Every encouragement is given to the production of livestock. Poultry and beef production have increased with favourable marketing conditions and with departmental assistance and loans under the Provincial Farm Development Loan Act. A veterinarian supervises the health of animals program and the joint federal-provincial project for the eradication of bovine tuberculosis.

The Agricultural Division co-operates with the Department of Education in furthering the 4-H Club movement in the province and accepts responsibility for all projects pertaining to agriculture.

Prince Edward Island.—The activities of the provincial Department of Agriculture are suggested by its staff which includes, in addition to the Minister and Deputy Minister, a dairy superintendent, three check testers, three dairy herd improvement promoters, a director of veterinary services and ten subsidized practising veterinarians, a livestock director, a marketing director, a horticulturist, a soil analysis assistant, a poultry fieldman, an economist, an agronomist, a director of 4-H Clubs, three agricultural representatives, a nursery supervisor, and a director, an assistant director and two extension workers of Women's Institutes.

Nova Scotia.—The Department of Agriculture and Marketing endeavours to "help the people to help themselves" through strengthening member interest in such organizations as the Nova Scotia Federation of Agriculture, the Nova Scotia Fruit Growers' Association, various agricultural co-operative organizations, credit unions and producer and marketing organizations. The Department is assisted by the Nova Scotia Advisory Committee on Agricultural Services which has been established to promote agricultural policies and projects of the federal and provincial Departments of Agriculture. The Committee meets quarterly to determine how the work of these Departments may be co-ordinated and directed through integrated agricultural policies and with minimum duplication of services.

New Brunswick.—Provincial government agricultural policy and programs in New Brunswick are directed by the Department of Agriculture. The Department is headed by the Minister of Agriculture who is assisted by the Deputy Minister and the Directors of the following Branches: extension, livestock and dairy, veterinary, poultry, horticulture, field husbandry, potato and plant protection, agricultural engineering, home economics, credit union and co-operative, and agricultural education.

* Information supplied by the agricultural authorities of the various provinces.

Quebec.—The agricultural policy of Quebec is formed around the premise that the family farm remains the ideal basis of the rural social structure. To serve the interests of agriculture, the provincial government, aided by various co-operative and professional associations, is working toward the improvement of agricultural production and marketing through the provision of farm credit, assistance to the farmer in organizing the collective commercialization of his products, the improvement of education and teaching facilities for farmers, and the encouragement of agricultural research. In addition, aid is provided in the form of subsidies to the settler and farmer in handicapped rural areas for the construction of buildings, the acquiring of stock, land clearing and development, and the transportation of produce to market. Under the federal-provincial ARDA program, plans are under consideration for the better utilization of farm lands and, generally, the rational development of rural areas.

These services are administered through the Department of Agriculture and Colonization which operates under authority of a Minister, two Deputy Ministers and an Advisory Board, and comprises three Directorates and ten Services, the several divisions and branches of which deal with specific problems. Each Service is headed by a director general.

The *Production and Marketing Service* gives guidance to farmers in the best methods of producing and marketing dairy, animal, horticultural and forestry products and administers the co-operative movement. Co-operative associations for the purchasing of farm supplies and the marketing of farm products are particularly prevalent in the Province of Quebec.

The *Research, Education and Information Service* administers the Agricultural Research Council which was founded in 1947 to direct, co-ordinate and stimulate research work in agriculture; the results of such research are published in the annual review *Recherches Agronomiques*. This Service is also concerned with the dissemination of scientific information to farmers and the general public through the press, radio and publications; animal hygiene; veterinary education (the School of Veterinary Medicine at St. Hyacinthe); and agricultural education (Institutes of Agricultural Technology at St. Hyacinthe and Ste. Anne de la Pocatière and fifteen intermediate schools). Information intended to improve family life in general by the cultural enrichment of the farm woman is given through direct teaching, by means of the review *Terre et Foyer*, through local exhibitions and the Provincial Exhibition of Farm Women's Clubs.

The *Rural Planning Service*, through its four sections—economy, planning, development and utilization of land—is mainly concerned with the implementation of joint federal-provincial programs being conducted under the federal Agricultural Rehabilitation and Development Act (ARDA). The *Colonization Service* is occupied with the establishment of settlers, concessions of land and clearing of land. The *Farm Planning and Extension Service* is involved in the solving of problems of management and the promotion of agriculture at regional and county levels. Twenty-seven local offices co-ordinate the work of agronomists and specialists. Five-year agricultural contests are held in which the farmers of a parish or county take part, and an annual competition for the Agricultural Order of Merit brings into the limelight the most deserving farmers in each of the five regions into which the province is divided. The work of the *Rural Engineering Service* falls into three categories—colonization roads, mechanized work and drainage work. The *Administration Service* deals with personnel, records and the purchasing and maintenance of materials and tools.

Also under the jurisdiction of the Department are the Farm Credit Bureau, the Quebec Sugar Refining Corporation (St. Hilaire) and the Agricultural Marketing Board.

Ontario.—The Ontario Department of Agriculture provides financial assistance and administrative services through its Head Office, 14 branches and one Demonstration Farm, and through research conducted under the direction of the Ontario Research Institute as well as that under way at the Ontario Agricultural College, the Ontario Veterinary College, Macdonald Institute, Western Ontario Agricultural School, Kemptville Agricultural School and the Horticultural Experiment Station.

The administration of the Department is under the supervision of the Deputy Minister with the assistance of two Assistant Deputy Ministers. The Ontario Agricultural College, the Ontario Veterinary College and Macdonald Institute now form part of the University of Guelph. The Research Institute is the responsibility of the Director of Research who, in turn, reports to the Deputy Minister. During 1962 an office was established to develop programs under the Agricultural Rehabilitation and Development Act of Canada.

The services of the Co-operatives Branch are designed to encourage and assist co-operatives to operate sound and successful businesses under the control of their members; it also administers the Co-operatives Loans Act. The Dairy Branch provides an inspection, instruction and supervision service to all dairy factories and promotes the production of clean milk on farms. The Milk Industry Board of Ontario, functioning under the authority of the Milk Industry Act, regulates and supervises the marketing of milk and cream. During 1963, a new approach to marketing and merchandising agricultural food products was initiated by the formation of the Ontario Producers, Processors, and Consumers Food Council. All segments co-ordinated their efforts toward the solving of current problems and the recommending of long-range policies. The Food Council operates as a separate branch and is also responsible for the market development program of the Department in an effort to increase markets at home and abroad. A Marketing Development Specialist is located in the Department of Economics and Development to co-ordinate development programs concerning agricultural food products.

Through a staff of agricultural representatives, one of whom is located in each county and district, the Extension Branch carries on an educational and extension service, and gives leadership to 4-H Club work and to the Ontario Junior Farmers' Association. It also provides assistance to farmers and settlers in northern Ontario in connection with land clearing and breaking and improvement of farms and livestock. The Home Economics Service, which is part of the Extension Branch, gives leadership to organized activities of rural women. The Live Stock Branch promotes livestock improvement policies and gives support to purebred livestock associations. The Veterinary Services Branch (created in 1964) administers the Community Sales Act, the Dead Animal Disposal Act, meat and livestock inspection and disease control, and provides diagnostic and extension services formerly under the Live Stock Branch.

The Farm Economics and Statistics Branch carries on research in farm business including cost analysis, marketing and land use; in co-operation with the Dominion Bureau of Statistics it gathers and publishes statistics of agricultural production. The Agricultural and Horticultural Societies Branch provides assistance to agricultural and horticultural fairs and exhibitions, ploughing matches and other competitions and administers the Community Centres Act. A Demonstration Farm in northern Ontario at New Liskeard is operated for the demonstration of methods adaptable to the area concerned, present emphasis being on beef cattle production. The Soils and Crops Branch assists in the development of good cultural practices, promotes the use of improved strains of seed and works for the improvement of pastures; it also administers the Weed Control Act.

The Research Institute co-ordinates all research activities of the province's agricultural schools and colleges in addition to developing a thorough research program in the interests of agriculture and industry associated with agriculture.

Manitoba.—The Department of Agriculture and Conservation serves Manitoba through the following branches.

The Extension Service deals with agricultural engineering, entomology and bee-keeping, radio, TV and information, 4-H Clubs and women's work, and has specialists devoting attention to these subjects. Meetings, field days, and short courses are held. Thirty-seven agricultural representatives and six assistants are located in 35 offices in the province, each serving from one to five municipalities; 14 home economists serve designated areas.

The Animal Industry Branch develops and administers policies that encourage the improvement and efficient production of different classes of livestock, including poultry; supervises the grading of cream and inspects dairy manufacturing plants. Several Acts to promote high-quality products for consumer protection are administered in close co-operation with federal departments.

The Soils and Crops Branch encourages the development, production and improvement of cereal, forage, special crops and horticulture and promotes proper land use through soil conservation programs. The Branch develops and administers policies that encourage good field crop husbandry, soil conservation and weed control.

The Economics and Publications Branch deals with agricultural economics, supervises the farm business clubs and publishes and distributes annually approximately 250,000 bulletins, circulars, posters, leaflets, etc. The Publications section publishes agricultural statistics and maintains an agriculture reference library.

The Co-operative Services Branch registers and supervises co-operatives and credit unions and administers the Acts governing them. It also collects and compiles statistics on co-operative activity throughout the province.

The Veterinary Services Branch provides a diagnostic laboratory for animal diseases; administers the brucellosis control program, the Veterinary Services District Act and the Veterinary Science Scholarship Fund Act; works in close co-operation with practising veterinarians and the federal Health of Animals Branch in the control of livestock and poultry diseases.

The Water Control and Conservation Branch administers, through the Water Rights and the Water Power Acts, the water resources of the province and all works in connection with the control and utilization of those resources. The Departmental Act and associated statutes provide for the construction of works to control and use water, and for technical and financial assistance to local governments for the construction, maintenance and operation of such works. The Floodway Division is responsible for co-ordinating all matters in respect to design and construction of the Red River Floodway.

Saskatchewan.—The Saskatchewan Department of Agriculture is organized in the following branches and services.

The Agricultural Representative Branch has a technical staff of 55, which serves all branches of the Department as well as the other agencies operating within the Co-operative Agricultural Extension Program. Agricultural representatives are active in all federal, provincial and university farm services; they work through Agricultural Conservation and Improvement Committees in each rural municipality and local improvement district to supply the farmer with scientific and practical information and to develop district improvement programs. The Department pays one half the cost of local group development projects. In farm labour matters, co-operation is maintained with the federal Department of Labour, including the National Employment Service.

Animal Industry Branch specialists provide technical information to livestock producers and administer the record of performance program for beef cattle. The Dairy Division of the Branch administers dairy herd improvement programs, assists producers with management and production problems, inspects and licenses dairy manufacturing and frozen-food locker plants, and administers dairy, locker plant and margarine legislation; the Livestock Division encourages the use of suitable animals for breeding purposes by the establishment of purebred sire areas and by assistance in the purchase and distribution of bulls, boars and rams, and registers brands, licenses livestock dealers and agents and promotes programs on insect control, feeding and management; the Poultry Division maintains poultry testing and banding services, licenses produce dealers and buyers, hatcheries and hatchery agents, and otherwise promotes flock improvement; the Veterinary Division assists students in veterinary science under a scholarship plan, administers the

Veterinary Service District Act and the calfhood vaccination program, provides a laboratory service for the livestock and poultry industries and co-operates with Federal Government officials and local veterinarians in disease prevention and control.

The Conservation and Development Branch provides engineering services for irrigation development, usually in co-operation with the Federal Government, and for drainage programs and water utilization and control projects. Land reclamation and development, and construction of provincial community pastures also come within its jurisdiction.

The Lands Branch administers Crown land, except forest reserves and parks in settled areas; classifies it according to the use for which it is best suited; disposes of such land under long-term leases; secures land control for land utilization projects; supervises new settlement projects; pays for clearing and breaking by farmers on provincial leases; and operates provincial community pastures.

The Plant Industry Branch conducts grassland improvement programs and programs for crop improvement and protection, and gives advice on soil conservation, horticultural problems, and weed and pest control. The Seed Plant Division carries on custom cleaning of forage seeds and registered cereals. The Apiary Division advises on beekeeping and honey production and conducts continuous inspection.

Farmers are assisted by the Family Farm Improvement Branch which gives technical advice at the farm on the construction of farm buildings and on farmstead planning, mechanization and materials handling. The Branch conducts research for farm water and sewage works.

The Economics and Statistics Branch undertakes research and investigations required to formulate and evaluate policies and programs that will ensure a high level of growth and efficiency in Saskatchewan's agriculture; it collects, analyses and distributes economic information and principles to assist people interested in or engaged in agricultural pursuits. Data on crop conditions, production, marketings and income are available from the Statistics Division.

Farm information is dispensed daily over private radio stations, over TV stations and to the press by the Information Division.

Alberta.—The Alberta Department of Agriculture is organized in the following branches and services.

The Field Crops Branch administers programs and policies relating to crops and soils. A supervisor is in charge of each division, namely, crop improvement, crop protection and pest control, weeds and soils, horticulture, apiculture, and special projects. A crop diagnostic service is offered through the Crop Clinic at Edmonton. The Horticultural Station at Brooks and the Tree Nursery at Oliver offer services in horticulture and provide trees for farm planting.

The Livestock Branch administers policies to aid in general livestock improvement and sire distribution. This includes setting standards for and approving public sales of sires, record-of-performance programs for beef cattle, sheep and swine and extension and control of artificial insemination. The Branch also administers supervision of Feeder Associations; brand registration; brand inspection; licensing of butchers, livestock dealers and stockyards; pound districts and sale of horned cattle.

The Dairy Branch administers the Dairymen's Act, the Frozen Food Act and the Margarine Act. The testing, grading and purchasing of raw produce by all dairy plants are under regulation, as are standards of construction, manufacture, processing, sanitation, and temperature control for dairy and frozen-food plants. A regular cow-testing service to provide the basis for breeding, feeding and culling dairy cattle is available to dairy producers and the Branch laboratory conducts chemical and bacteriological analyses needed for industrial directives.

The Poultry Branch carries on programs for the improvement of poultry husbandry and supervises flock approval for the control of pullorum disease. The Branch issues hatchery, wholesale, first receiver and trucker licences for the handling of poultry products.

The Veterinary Services Branch provides diagnoses of livestock and poultry diseases through its laboratory; conducts investigations of disease conditions; lectures in veterinary science at the University of Alberta and at many meetings; and promotes government policies aimed at reducing losses throughout the province such as brucellosis control, stockyard inspection, swine health program, mastitis, etc.

The Agricultural Extension Service operates 47 offices and employs the services of 62 district agriculturists and 21 district home economists. The district agriculturists and district home economists supply information and provide guidance to farm families with respect to agriculture and homemaking; they also promote progressive agricultural or homemaking policies and programs. 4-H Clubs are administered by this Branch. The Branch is divided in the following main divisions: district agriculturists; district home economists; 4-H Clubs; agricultural engineering; radio and information; and publications and visual aids.

The Fur Farms Branch administers the licensing and exporting of live animals and pelts, and assists fur farmers in care, management and stock improvement; the Radio and Information Branch conducts five broadcasts a week over ten radio stations and issues weekly bulletins to press and radio; the Water Resources Branch deals with water rights, drainage, irrigation and water power development; the Lands and Forests Utilization Committee (composed of representatives from the Department of Lands and Forests, Power Commission, Department of Municipal Affairs, University of Alberta and Department of Agriculture) deals with the proper use of submarginal agricultural land; the Alberta ARDA Program is conducted by the ARDA Co-ordinator in co-operation with the Land Utilization Committee; and the Farm Economics Branch studies various economic farm problems and advises farmers on management and marketing.

Credit is made available to farmers for the purchase of land under the Farm Purchase Credit Act, and for home improvements under the Farm Home Improvement Act. Agricultural and Vocational Colleges are operated at Olds, Fairview and Vermilion.

British Columbia.—The Department of Agriculture has four main branches. The Administrative Branch is responsible for the general direction of agricultural policies, the administration of legislation affecting agriculture and the compilation of reports and publications. This Branch also maintains direct supervision of the Field Crops, Soil Survey, Plant Pathology, Entomology, Apiary, Markets and Statistics, Farmers' Institutes and Women's Institutes Branches.

The Livestock Branch engages in the promotion and supervision of the livestock industry and provides veterinary services affecting disease control regulations; its work also includes supervision of stock brands, inspection of dairy and fur farm premises, and inspection of licensed abattoirs too small to qualify for federal inspection services. In addition, the Branch supervises the operations of the Dairy Branch in the inspection of commercial dairy premises, dairy farms and the laboratory testing of fluid milk. Officials are stationed at 11 centres throughout the province.

The Horticulture Branch supervises fruit, vegetable and seed production, and provides advice on plant diseases and insect pest control. The Branch maintains field offices at nine points in the southerly section of the province.

The Agricultural Development and Extension Branch offers general information services to farmers through 17 offices which cover all major farming districts. In addition, this Branch provides agricultural engineering service, supervision of the government land-clearing program and farm labour services, and promotes junior club projects. The Poultry Branch offers extension services to the poultry industry.

Subsection 2.—Agricultural Colleges and Schools

All provinces provide facilities or assistance for training in agricultural sciences, which may be at university or secondary school level or be given in special short-term or longer-term courses. A number of universities in the provinces of Central and Western Canada offer degree courses in agricultural, household and veterinary sciences and also provide opportunities for postgraduate study and research in the agricultural field. Most courses at the secondary level give practical training in modern farming methods and community leadership. The facilities available in each province are described in the 1963-64 Year Book, pp. 430-432.

Section 3.—Statistics of Agriculture*

The collection, compilation and publication of statistics relating to agriculture is a responsibility of the Dominion Bureau of Statistics. Valuable information is obtained through the Censuses of Canada and through partial-coverage surveys. Results of the 1961 Census are summarized in Section 4 of this Chapter and are available in greater detail in census publications issued by the Bureau.† A list of such publications is available on request.

The Bureau also collects and publishes primary and secondary statistics of agriculture on an annual and monthly basis. The primary statistics relate mainly to the reporting of crop conditions, crop and livestock estimates, wages of farm labour and prices received by farmers for their products. The secondary statistics relate to farm income and expenditure, per capita food consumption, marketing of grain and livestock, dairying, milling and sugar industries and cold storage holdings. In the collection of annual and monthly statistics, the Canada Department of Agriculture and various provincial departments, as well as such agencies as the Board of Grain Commissioners and the Canadian Wheat Board, co-operate with the Bureau. Many thousands of farmers throughout Canada send in reports voluntarily and dealers and processors also provide much valuable data. The figures contained in this Section do not include estimates for Newfoundland. Agriculture plays a relatively minor part in Newfoundland's economy, commercial production of most agricultural products being quite small. In the following Subsections, details are given for 1964; figures are subject to revision.

Agriculture in 1964 Related to Economic Activity.—The gross national product rose to \$47,000,000,000 in 1964 from \$43,000,000,000 a year earlier, recording a gain of over 9 p.c. which was the largest annual increase since 1956. As prices were only about 2.5 p.c. higher in the later year, much of the increase in the national product represented a rise in the volume of output. However, farm production as a whole did not contribute to this increase because of the decline in grain production in Western Canada. Although the grain crop in this area was large, it was considerably below the record harvest of 1963 with the result that over-all farm production was 7 p.c. below the record level of that year.

Cash receipts from the sale of farm products stood at a record level in 1964. This was the result largely of the very heavy marketings of the record 1963 wheat crop during the first half of 1964 to fulfil an unusually large export contract with the U.S.S.R. At the same time, the Canadian Wheat Board closed its accounts for the 1962 crops of wheat, oats and barley and paid out substantial amounts in the form of participation payments. Also, 1964 cash receipts from the sale of livestock and livestock products were slightly above those for 1963; prices were lower for these items but production was higher. Although farm operating expenses and depreciation charges continued to climb in 1964, they did not rise nearly as rapidly as cash receipts. Accrued net income of farm operators from farm production, which is a component of national income, was \$1,500,000,000, compared with \$1,700,000,000 in 1963.

* Revised in the Agriculture Division, Dominion Bureau of Statistics.

† Available from the Dominion Bureau of Statistics or the Queen's Printer, Ottawa.

Subsection 1.—Cash Receipts* from Farming Operations, 1964

Estimates of cash receipts from farming operations include data concerning cash receipts from the sale of farm products, Canadian Wheat Board participation payments on previous years' grain crops, net cash advances on farm-stored grains in Western Canada, deficiency payments made by the Agricultural Stabilization Board, and supplementary payments. Farm cash receipts from the sale of farm products include the returns from all sales of agricultural products except those associated with direct inter-farm transfers. The prices used to value all products sold are prices to farmers at the farm level; they include any subsidies, bonuses and premiums that can be attributed to specific products, but do not include storage, transportation, processing and handling charges which are not actually received by farmers.

Cash receipts for 1964, excluding supplementary payments, were estimated at \$3,455,600,000 for Canada, excluding Newfoundland. This was a record high and exceeded by 8.5 p.c. the previous high of \$3,184,500,000 established in 1963. The increase was attributed for the most part to a substantial increase in farmers' marketings of wheat and to much larger participation payments made by the Canadian Wheat Board, although some contributions were made by oilseed crops, potatoes, barley, fruits, vegetables, cattle, hogs and dairy products. Partially offsetting these gains were lower total receipts from poultry products, tobacco and oats, and a substantial repayment of cash advances on farm-stored grains in Western Canada.

Farmers also received, under the provisions of the Prairie Farm Assistance Act,† supplementary payments amounting to \$8,500,000 as against \$14,800,000 during 1963. Altogether, farm cash receipts from farming operations and total supplementary payments amounted to \$3,464,100,000 for 1964, about 8.3 p.c. above the previous high of \$3,199,300,000 in 1963.

Field Crops.—It is estimated that during 1964 farmers realized \$1,569,800,000 from the sale of field crops, cash advances on farm-stored grains in Western Canada, and Canadian Wheat Board payments. This was nearly 20 p.c. more than the \$1,320,400,000 realized in the previous year, largely because of higher receipts from wheat marketings and

* Formerly "Cash Income".

† Payments to farmers under the provisions of the Prairie Farm Assistance Act are made from the Prairie Farm Emergency Fund, to which farmers contribute by means of a 1-p.c. levy on grain marketings.

Canadian Wheat Board participation payments. In total, income from field crops in 1964 accounted for approximately 45 p.c. of total cash receipts for the year, excluding supplementary payments, compared with about 40 p.c. in 1963.

Cash receipts to farmers from wheat at the time of delivery and before adjustment for cash advances totalled \$741,000,000, about 24 p.c. above 1963. For the most part, this gain arose out of unusually heavy marketings by farmers from the record 1963 crop to meet above-normal export demand. During 1964, the Canadian Wheat Board distributed to farmers a total of nearly \$225,000,000 in the form of participation payments compared with about \$124,000,000 in 1963. The 1964 payments represented a final payment of 42.5 cents per bu. on wheat delivered to the Board from the 1962 crop and also final payments of 12.4 cents and 18.2 cents per bu. paid, respectively, on deliveries from the 1962 crops of oats and barley. The payments made in 1963 were made up entirely of a final payment of 43.0 cents per bu. on deliveries from the 1961 wheat crop. These payments arise out of the system of grain marketings in Western Canada whereby farmers, at the time they deliver their grain, are given initial payments and certificates stating the quantities and grades delivered. These certificates entitle producers to share in surpluses accumulated by the Board through subsequent sales of these grains for domestic consumption or export. The share of the money accruing to farmers represents the Canadian Wheat Board payments included in these estimates of farm receipts.

Receipts from flaxseed, rapeseed and soybeans rose from a total of \$61,500,000 in 1963 to \$93,400,000 in 1964 largely as a result of increased marketings; rapeseed was the only oilseed for which there was any noticeable increase in price. Cash receipts from flaxseed were up from \$36,400,000 in 1963 to nearly \$60,000,000 in 1964, and returns to rapeseed growers increased from \$11,700,000 to about \$18,000,000. Initial delivery prices for barley remained unchanged but marketings increased to give total receipts from this crop of almost \$72,000,000 as against \$67,700,000 in 1963. Receipts from potatoes, at \$55,100,000 in 1964, were 31.4 p.c. above the 1963 level as a result of both larger marketings and higher prices, and fruits and vegetables rose to \$157,200,000 from \$146,300,000.

The most important offset to the above gains was caused by repayments of cash advances on farm-stored grains in Western Canada. Heavy marketings of grains during 1964 led to repayments that exceeded cash advances by \$12,100,000, leading to a net entry in farm cash receipts of minus \$12,100,000; this was in contrast to the previous year when advances exceeded repayments by \$11,200,000. Returns from tobacco amounted to \$96,700,000 compared with \$114,200,000 in 1963, most of the decline occurring in Ontario and resulting from lower prices and to the fact that a much larger proportion of the 1963 crop was sold during the year of production than was the case for the 1962 crop. Farmers' marketings of oats declined quite significantly in 1964. This, together with average prices approximately the same as in 1963, provided total cash receipts from this source of \$33,000,000 in 1964, 27.8 p.c. less than a year earlier.

Livestock and Livestock Products.—Total cash receipts to producers of livestock and livestock products, amounting to \$1,853,000,000 in 1964, were little different from those of 1963. Marketings of cattle, calves and hogs were above 1963 levels but prices averaged lower. Fewer sheep and lambs were marketed at prices not greatly different from those of 1963, resulting in slightly lower receipts from this source.

A record production more than offsetting slightly lower prices gave a total cash income of \$173,200,000 from the production of poultry meat as against \$168,900,000 in 1963. Egg production also increased quite substantially but the decline in prices was proportionally greater with the result that cash receipts decreased from \$148,400,000 in 1963 to \$132,600,000. A combination of higher prices and a slight increase in production provided total receipts from dairy products of approximately \$531,000,000 in 1964, about \$21,000,000 above the level of the previous year.

Net Income of Farm Operators from Farming Operations.—Two different estimates of net income from farming operations are prepared by the Agriculture Division. One is called *realized net income* and is obtained by adding together cash income from farming operations, supplementary payments and the value of income in kind, and deducting farm operating expenses and depreciation charges. This estimate of farm net income represents the amount of income from farming that operators have left for family living or investment after provision has been made for operating expenses and depreciation charges. The second estimate is referred to as *total net income* and is obtained by adjusting realized net income to take into account changes occurring in inventories of livestock and stocks of grains on farms between the beginning and the end of the year. The latter estimate is the one used to calculate the contribution of agriculture to national income.*

For 1964, *realized* farm net income was estimated at \$1,526,100,000, an amount about 13 p.c. above the 1963 estimate of \$1,346,300,000 and 14 p.c. higher than the average of \$1,339,200,000 for the five-year period 1959-63. Compared with 1963, farm operating expenses and depreciation charges were up more than 4 p.c. and supplementary payments declined, but farm cash receipts from farming operations set a new record high and the value of income in kind increased.

Total net income amounted to \$1,432,000,000 in 1964, nearly 14 p.c. below the 1963 level of \$1,654,800,000, but about 4 p.c. above the average of \$1,379,400,000 for the 1959-63 period. Farm inventories of grains in the Prairie Provinces declined quite substantially between the beginning and the end of the year as a result of a lower level of grain production in 1964 than in 1963; this, together with the increase in farm operating expenses and depreciation charges, more than offset the record high cash receipts to give a total net income for 1964 below that of a year earlier.

Farm cash receipts, the most important component of farm net income, and supplementary payments are discussed on p. 474. Income in kind, which includes the value of farm consumption of home-grown foodstuffs, wool and forest products plus an imputed rental value of farm dwellings, was estimated at \$367,800,000 for 1964 as against \$354,900,000 in 1963. This gain can be attributed entirely to an increase in the value of consumption of fruits and vegetables and a higher imputed rental value for the farm home.

The value of inventory change is obtained by calculating the change in the quantity of grain and the number of livestock on farms between the beginning and the end of the year and valuing the difference at average annual prices. The value of inventory change at the end of 1964 was minus \$94,000,000 as against \$308,400,000 for 1963, reflecting a substantial reduction in farm-held stocks of grain arising out of the smaller crops in 1964 compared with 1963, partially offset by a build-up in the numbers of livestock and poultry.

Operating expenses† and depreciation charges include farm business costs incurred by farmers regardless of whether they are paid for in cash or accumulated as new debt. As far as possible they exclude outlays for goods and services obtained directly from other farmers. All subsidy payments are taken into account so that the estimates represent only the net amounts paid by farmers. The total of these expenses and depreciation charges reached a new high of \$2,305,800,000 in 1964, more than 4 p.c. above the 1963 estimate of \$2,207,900,000. With the exception of gross rent, all items of farm costs in 1964 were above the level of the previous year. In the case of rent, farmers' outlays were reduced quite substantially as a result of smaller crops and the consequent reduction in share-rental payments. For the second consecutive year, expenditure on fertilizer and lime showed the greatest increase both on a percentage basis and in absolute terms; costs to farmers rose from \$105,000,000 in 1963 to \$126,400,000 in 1964 as a result of higher prices and a substantial increase in the quantities used. Although the hired labour force in agriculture

* Information on the methods and concepts used to determine the contribution of agriculture to national income is available in DBS publication *Handbook of Agricultural Statistics*, Part II.

† Certain expense estimates used here do not agree with those published by the 1961 Census of Agriculture; revisions based on the Census and those arising out of the 1958 Survey of Farm Expenditure were not completed at the time of preparation of this material.

tended to be slightly smaller in 1964 than in 1963, total expenditures for hired help continued to rise as wages climbed. Higher total interest payments occurred as a result of the use of increasing amounts of credit by the agricultural industry. Larger outlays for feed stemmed from greater consumption. Higher total costs for the operation of farm machinery reflected slightly higher prices for petroleum products and greater outlays for repair parts. Farmers continued to buy substantial amounts of new farm machinery, indicated by the continuing rise in the allowance for depreciation.

6.—Net Income of Farm Operators from Farming Operations, 1961-64

(Exclusive of Newfoundland)

NOTE.—Includes estimated rental value of farm homes, supplementary payments made under the provisions of the Prairie Farm Assistance Act and payments under the Western Grain Producers' Acreage Payment Regulations.

Subsection 2.—Volume of Agricultural Production

The index of physical volume of agricultural production for Canada was estimated at 151.5 for 1964 (1949=100). Although 7 p.c. below the high of 162.9 established in 1963, it was the second highest production estimate on record. The decline was entirely accounted for by the reduction in grain production, particularly in Saskatchewan and Alberta. For the remaining commodities considered in the index, production for all of Canada was above the level of the previous year.

On a provincial basis, the greatest decline in the index occurred in Saskatchewan where much of the end product of farm production is represented by crops. Smaller crops were also reflected in the decline in the index for Alberta, but the effect was much less than in Saskatchewan because of the relatively greater importance of livestock and livestock products. Nova Scotia and Quebec were the only other provinces where the index of production was below the 1963 level. Nova Scotia's lower total production was largely attributable to a decrease in the output of dairy products and eggs, and smaller production of dairy products and hogs accounted for much of the decline in the index for Quebec.

The index has been designated as an index of unduplicated gross farm production and, in its construction, provision has been made to avoid double counting of farm output. Within a province, such double counting occurs when feed grains, credited to field crop production, are fed to livestock, and appear later as livestock and livestock products. Interprovincially, this duplication occurs when feed grains produced in one province are fed in another, and when feeder cattle raised in one section of the country are shipped to another for finishing.

8.—Index Numbers of Physical Volume of Agricultural Production, by Province, 1955-64 (1949=100. Exclusive of Newfoundland)

NOTE.—For a description of the index, methods and coverage, see DBS publication *Index of Farm Production 1962* (Catalogue No. 21-203).

Subsection 3.—Field Crops

A wide variety of crop growing conditions were observed throughout Canada during the 1964 season. The Prairie Provinces received only limited moisture in the fall and winter of 1963-64 but spring rains over most of the region provided enough moisture to make a good seed bed for spring-sown crops. The main exception was over a considerable area of northern and central Saskatchewan where dry conditions were experienced for much of the growing season. As the summer progressed, Manitoba and eastern Saskatchewan received sufficient rainfall to properly advance all crops but in the northwestern quarter of Saskatchewan and the adjacent area of Alberta moisture was limited to local showers and, as a result, stands were thin. Hot, dry weather in the southwestern quarter of Saskatchewan and in southeastern Alberta in the latter part of June and early July reduced yields considerably but normal growing conditions were experienced in the western sections of Alberta. The Peace River area received adequate to excessive moisture and this, along with poor harvesting weather, caused some reduction in final outturns.

In Ontario, growing conditions were variable. Generally adequate moisture was received in the southwestern part of the province to assure good crops but drought conditions prevailed throughout the summer months in many counties in the eastern part and extended into adjacent areas of western Quebec. Rainfall was sufficient in eastern Quebec and the Maritime Provinces to develop good crops.

Average progress was made with the harvest in southern areas of the Prairie Provinces but operations were somewhat delayed in most northern sections by wet, cool weather from mid-August to early October. Good weather prevailed during the remainder of October permitting most farmers to harvest their crops, although grade losses resulted. Wet, cool weather also caused delays in British Columbia. Harvesting conditions in most of Eastern Canada were quite satisfactory.

The index of field crop production for Canada in 1964 (1949 = 100) was 154.5 compared with the 1963 record level of 176.5. In Manitoba, crop outturns were larger than the preceding year but production in Saskatchewan dropped from the exceptional level of 249.5 in 1963 to 165.5 in 1964 and in Alberta from 205.9 to 185.9. In Ontario, mainly because of the record corn crop, the index stood at an all-time high of 145.8 compared with the 1963 index of 135.3. Only minor changes occurred in the 1964 index in Quebec, New Brunswick, Nova Scotia and Prince Edward Island.

The 1964 wheat crop in Canada was 600,424,000 bu., some 17 p.c. below the all-time record of 723,442,000 bu. set in 1963 but 29 p.c. above the five-year (1955-59) average of 465,618,000; the crop was the fourth largest on record. Yield per acre dropped to 20.2 bu. compared with 26.2 bu. in 1963.

Carryover stocks of oats and barley and commercial stocks of corn were at the unusually high level of 6,000,000 tons at Aug. 1, 1964, some 1,200,000 tons more than in 1963 and double the 1962 opening stocks. Out of the 1964 production of feed grains (corn, oats, barley, mixed grains and buckwheat) corn was the only crop to show a significant increase. In total, production of these feed grains amounted to some 12,700,000 tons as compared with 15,400,000 tons in 1963. Although the 1964 figure was only slightly below the 1958-62 average of 12,900,000 tons, it still ranked next to the lowest production total in that five-year period. Reflecting the decline in production which more than offset an increase in opening stocks, total domestic supplies of the feed grains amounted to 18,700,000 tons as compared with 20,200,000 tons in 1963-64 and the five-year average of 17,700,000 tons. Tame hay production in 1964, at 21,365,000 tons, was 7 p.c. smaller than the 1963 record of 23,014,000 tons but the 1964 crop of fodder corn produced 4,974,000 tons, 11 p.c. greater than the 1963 total of 4,465,000 tons.

The 1964 productions of soybeans and rapeseed showed noticeable increases but outturns of the other three oilseed crops (flaxseed, sunflower and mustard seed) each decreased. The flaxseed crop was 11 p.c. below the 1963 production and 16 p.c. below the 1955-59 average. Rapeseed production, up 34 p.c. compared with 1963, was double the 1955-59 average bushels; the area seeded to this crop was about 46 p.c. larger than in 1963 but average yields of 15.8 bu. per acre were some 10 p.c. lower. The soybean crop was 39 p.c. larger than the 1963 crop, the average yield per acre being at a next-to-record 30.2 bu. compared with 21.9 bu. a year earlier and a 1955-59 average of 25.2 bu. Total production of sunflower seed was slightly below the 1963 crop but almost double the five-year average. The acreage sown to mustard seed was only 48 p.c. of that allotted to this crop in 1963 and, with yields down by 28 p.c., production of the crop was greatly reduced.

Outturns of potatoes, field roots and sugar beets were above the 1963 levels. New Brunswick still retains the lead in the production of potatoes, producing 11,016,000 cwt., followed by Ontario, Quebec and Prince Edward Island with 10,494,000 cwt., 8,208,000 cwt. and 7,892,000 cwt., respectively.

The 1964 gross farm value of field crops was not yet available at the time of going to press. However, the 1963 gross farm value for all crops amounted to \$2,511,933,000, of which wheat contributed \$1,259,223,000 or 50 p.c. In the great wheat-growing province of Saskatchewan the 1963 wheat crop was valued at a record \$862,750,000, making up 68 p.c. of the gross farm value of Canadian wheat and 34 p.c. of the gross farm value of all Canadian field crops.

Stocks of Grain in Canada.—Table 12 shows the stocks of Canadian grain on hand in Canada and in the United States on July 31 for the years 1960-64, with averages for the five-year periods 1950-54 and 1955-59. Stocks in Canada are separated into those in commercial positions and those on farms. Stocks on farms and in country elevators in the Prairie Provinces are given separately.

12.—Carryover of Canadian Grain as at July 31, 1960-64, with Averages for 1950-54 and 1955-59

NOTE.—Figures for individual years before 1960 will be found in the corresponding table of previous editions of the Year Book.

Subsection 4.—Livestock and Poultry

Livestock.—The most outstanding livestock development in 1964 was the sharp increase in the number of cattle slaughtered, which was the more remarkable considering the high slaughtering in 1963. Also exceptional was the importation of some 30,000 slaughter cattle from the United States compared with virtually no imports of fat cattle in the previous three years. Despite this large supply, prices remained steady, there being a strong demand for beef; the latter was a reflection of increased incomes resulting from the improved performance of the economy in 1964. Noteworthy also were lower exports of feeder cattle, a reduction in the rate of decline in the number of milk cows and a continued but more moderate increase in beef cattle. Swine numbers rose again, particularly in the west, but sheep numbers continued to decline. The total number of cattle and calves on farms in Canada (exclusive of Newfoundland) at June 1, 1964 was estimated at 12,817,000, a rise of 512,000 over the June 1, 1963 total of 12,305,000. The number of milk cows went down from 2,914,500 to 2,906,000 and other cattle increased from 9,390,500 to 9,911,000.

The interesting aspect of the per capita disappearance of meats in 1964 was the almost 5-lb. increase in con-

sumption of beef over 1963. This brought the per capita disappearance up to 78.7 lb., an all-time high. Figures for the other red meats were: veal, 7.0 lb. (6.7 in 1963); mutton and lamb 3.4 lb. (3.9); pork 51.9 lb. (50.7); offal 3.9 lb. (4.0); and canned meats, 4.5 lb. (4.4). All figures are on a cold dressed carcass basis.

Tables 13 and 14 give numbers and values of livestock on farms in 1963 and 1964 compared with the figures for 1955.

13.—Livestock on Farms, by Province, as at June 1, 1955, 1963 and 1964

¹ Cows and heifers, two years old or over, kept for milk purposes.

The federal Department of Agriculture inspects all livestock in plants designated as inspected establishments under the Meat and Canned Foods Act. A record is kept of these inspections and figures from 1955 are given in Table 15. Local wholesale butcherings and slaughtering carried out by retail butchers and by farmers for their own use are not included. Actually, the slaughtering and meat packing industry is concentrated in a comparatively small number of large establishments to facilitate greater efficiency and utilization of products; thus the figures of Table 15 are fairly inclusive. The slaughtering and meat packing industry is dealt with in its proper relation to all other manufacturing enterprises in Chapter XVI of this volume. On a gross value basis, it normally ranks among the four largest manufacturing industries in Canada but it owes its importance to the value of raw products obtained from the farmer and the rancher rather than to the value added by the manufacturing process.

Almost 14 p.c. more cattle were slaughtered in inspected establishments in 1964 than in 1963. Slaughtering of calves were up 12 p.c. and slaughtering of hogs by a like percentage. On the other hand, slaughtering of sheep and lambs declined by 6.5 p.c.

Price movements in 1964 are indicated by the annual average calculation of prices on the Toronto, Montreal, Winnipeg and Edmonton markets as shown in Table 42, p. 505.

Subsection 5.—Dairying

The dairy industry occupies a prominent position in Canadian agriculture and is an important source of farm cash receipts. Although the size of the national dairy herd has been declining gradually, milk production continues upward at the average rate of about 1 p.c. each year. There has been an over-all increase in output per cow as a result of the tendency to switch from low-producing breeds and from the following of improved livestock programs, especially through artificial insemination. Dairy herds have become fewer but larger. In 1951 about 12 p.c. of the cows were in herds of 13 or more but by 1961 the percentage had risen to 27. In Ontario and Quebec over 40 p.c. are now in this category. Increasing specialization and the change to larger herds often means better managed cows and more milk per cow.

Milk production is concentrated in Central Canada, Ontario and Quebec accounting for about 70 p.c. of the total quantity. Of the total output in 1964, 62.3 p.c. was used for factory-made dairy products, 27.6 p.c. was sold in fluid form and 10.1 p.c. was used for all purposes on farms. In recent years, fluid milk usage has risen slowly but has shown little change as a percentage of total milk production. Fluid sales, which include standard, homogenized, partly skimmed and skim milk, and a variety of creams, are being maintained by the increased demand for partly skimmed milk which has occurred as a result of a shift in emphasis from fat to non-fat constituents in milk.

¹ Used in farm butter only.² Includes values of skim milk and buttermilk retained on farms.

Historically, butter was the residual product into which the summer milk was made for storage and use during the winter months. This is still the case, particularly in Prince Edward Island, Quebec and the Prairie Provinces where slightly over half the milk is made into butter.

In 1964, about 352,000,000 lb. of creamery butter and 5,000,000 lb. of farm butter were produced in Canada. This accounted for 8,360,000,000 lb. of milk or about 45 p.c. of the national output. The demand for solids non-fat has encouraged farmers to ship increasing quantities of whole milk instead of farm-separated cream to the creameries. Whole milk used in butter manufacturing was estimated at 3,400,000,000 lb. in 1964, more than the amount used in all other manufactured dairy products. Consumption per capita of creamery butter was 18.53 lb. compared with 18.56 lb. in 1963.

During the past ten years, cheese production has gradually increased, particularly in Ontario and Quebec. These two provinces account for more than nine tenths of the total output. In 1964, some 160,500,000 lb. of cheese were produced, which represented about 1,760,000,000 lb. of milk or approximately 10 p.c. of the total milk production. Exports of all cheese, mostly cheddar, in 1964 amounted to 31,658,000 lb. compared with 25,823,000 lb. in 1963. Most of the Canadian exports of cheddar traditionally originate in Ontario, which exports about 40 p.c. of its production.

¹ Factory-made cheese includes cheddar and other cheese made from whole milk and cream.

² Amounts

for "other cheese" are included in Quebec, Ontario and Alberta figures but, as fewer than three firms reported in the other provinces, data cannot be included except in the Canada total.

Concentrated milk products, which comprise a large group of products, both whole milk and skim milk, are moving in opposite utilization trends. The amount of milk going into whole milk products—evaporated milk, dry whole milk and partly skimmed concentrated products—is decreasing; milk used for these products amounted to 1,300,000,000 lb. in 1964, about 150,000,000 lb. less than in 1961. On the other hand, there is a rapidly expanding market for solids non-fat, in the form of dry skim milk and casein; in the period 1958-64, the quantity of whole milk from which these two products were made rose by 1,000,000,000 lb. to 3,400,000,000 lb. Casein production is concentrated in Quebec, about 96 p.c. of the national total originating in that province.

The importance of international trade in this sector of the industry is evident from the fact that of every 10 lb. of whole milk powder produced in Canada, eight are exported; of

every 10 lb. of casein produced, seven are sold abroad; and of every 10 lb. of skim milk powder produced, two are exported. In normal years, export values of dairy products are three times as large as import values.

The estimated consumption of fluid milk and cream, on a milk basis, amounted to 4,681,896,000 pt. in 1964, which was 57,483,000 pt. higher than the 1963 estimate. Daily average consumption per capita dropped slightly to 0.68 pt. from 0.69 pt. in 1963. The estimated consumption of milk and cream is given by province in Table 23 and the domestic disappearance of all dairy products in Table 24.

¹ Includes Newfoundland for all manufactured dairy products.² Includes, in addition to the items listed,

malted milk, cream powder, partly skimmed evaporated milk, whole milk powder of less than 26-p.c. fat, formula milks, evaporated milk of 2-p.c. fat, and concentrated liquid milk.

³ Includes milk by-product items not

listed, i.e., condensed buttermilk, powdered buttermilk, sugar of milk, casein, powdered w.e.v. special formula skim milk products, lactalbumin and concentrated liquid skim milk. Since the quantities used for human consumption and livestock feeding need to be separated, per capita figures include both.

⁴ Includes ice cream

milk in terms of milk.

Subsection 6.—Fruits and Vegetables

Fruits.—Commercial fruit growing in Canada is confined almost exclusively to rather limited areas in the Provinces of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia. Nova Scotia production is centred mainly in the Annapolis Valley and New Brunswick production in the St. John River Valley and Westmorland County. The fruit growing districts of Quebec are the Montreal area, the North Shore area, the Eastern Townships and the Quebec City district. Ontario fruit is grown in all the counties adjacent to the St. Lawrence River and the Great Lakes as far west as Georgian Bay, the Niagara district being the most productive. In British Columbia the four well-defined fruit areas are the Okanagan Valley, the Fraser Valley, the Kootenay and Arrow Lakes district and Vancouver Island. The climate elsewhere in Canada is not generally suitable for commercial tree-fruit culture. In most producing areas, particularly in the Annapolis Valley of Nova Scotia, the Niagara Peninsula of Ontario and the Okanagan Valley of British Columbia, fruit growing is either the principal or one of the most important forms of agriculture and is very important to the economy of those areas. Apples and small fruits are produced commercially in the provinces named but tender tree fruits and commercial vineyards are limited largely to Ontario and British Columbia.

Strawberries are grown commercially in all provinces for which tree-fruit statistics are prepared, as well as in Prince Edward Island. However, this crop is produced over a somewhat wider area than are tree fruits. In Nova Scotia, for example, considerable quantities of strawberries are grown in Colchester County and farther north, as well as in the apple producing areas of the Annapolis Valley. In British Columbia most of the strawberries are grown in the Fraser Valley.

Raspberries are grown commercially in Nova Scotia, New Brunswick and Quebec but the bulk of the crop is produced in Ontario and British Columbia. The Fraser Valley of British Columbia is the most important producing area.

Wild blueberries are harvested on a commercial scale in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick and Quebec. This crop is indigenous to certain areas in these provinces and a large percentage of the crop is frozen and exported. There is also some production of cultivated blueberries, particularly in British Columbia.

A marketing system has been developed for distributing fresh fruit from the specialized production areas to all parts of the country and a large proportion of the deciduous fruit consumed in Canada is grown domestically. Considerable quantities of apples, strawberries and blueberries are exported.

Canning and processing industries have developed in the fruit growing districts and, although the importance of the processing market varies with different fruits, it provides a valuable outlet for substantial proportions of most Canadian-grown fruit crops.

Tables 25 and 26 show the estimated commercial production of fruit, by kind, for the years 1962-64 and by province for 1957-64.

25.—Estimated Commercial Production and Farm Value of Fruit, 1962-64

Vegetables.—Estimates of acreage and production of commercial vegetables in Canada are prepared for all provinces except Newfoundland, Prince Edward Island and Saskatchewan. The Province of Ontario is the largest producer, followed by Quebec and British Columbia. A wide variety of crops is grown in these three provinces and a somewhat smaller range in the Maritimes and in the Prairie Provinces.

Canning, freezing and processing of vegetables are carried on in the important producing areas. The estimates in the following tables cover output of commercial growers for processing and for sale on the fresh market but do not include acreages or production of vegetables grown for home use on farms or elsewhere.

¹ Estimates apply only to that portion of the crop grown for processing in all provinces for which estimates are made except British Columbia.

Subsection 7.—Other Principal Farm Products

Tobacco.—Canada produces several types of leaf tobacco but by far the most important is the flue-cured or Bright Virginia type. This is produced mainly in Ontario, along with considerable quantities of burley and smaller amounts of dark (air-cured and fire-cured) tobacco. Quebec produces smaller quantities of these types as well as some cigar and pipe tobacco and small flue-cured acreages are also harvested in Prince Edward Island and Nova Scotia. In 1964, lower acreages of all types of tobacco resulted in decreased production compared with 1963. Ontario allotments for flue-cured were reduced from 99,537 acres to 73,479 acres and the crop from 180,297,000 lb. to 136,641,000 lb.; this was the main element in the over-all production and value decrease shown in Tables 29 and 30.

A study of Department of National Revenue reports on tax-paid withdrawals of tobacco products reveals changes in the smoking habits of Canadians during the past three decades. In 1922, the first year for which comparable figures are available, Canadian annual per capita consumption of cigarettes was 229; by 1959 the annual per capita consumption (calculated on the basis of total population) had increased to 1,939. The figure for 1963 was 2,110 and that for 1964 was 2,113.

1964	85,316	1,802	153,711,000	54.1	83,131,000

¹ Includes other types not specified.

Eggs.—Egg production in 1964 at 437,906,000 doz. was 4.8 p.c. higher than the estimated output of 417,920,000 doz. in 1963 but 2.3 p.c. lower than the record production of 448,200,000 doz. in 1959. There were 4.0 p.c. more layers than in 1963 and the rate of lay per 100 layers increased to 20,095 from 19,943. The farm selling price of eggs averaged 32.7 cents per doz. compared with 38.4 cents in 1963 so that, despite the higher production, there was a decrease in total value of eggs produced.

The three Maritime Provinces produced 7.3 p.c. of all eggs in 1964; Quebec, 16.3 p.c.; Ontario, 40.5 p.c.; the Prairies, 25.0 p.c.; and British Columbia, 10.9 p.c.

¹ Total laid less loss.

Wool.—Canada's wool requirements are met largely by imports which amounted to 62,970,000 lb. (greasy basis) in 1964 compared with 59,805,000 lb. in 1963. Exports amounted to 3,223,000 lb. in 1964 and 4,661,000 lb. in 1963. The apparent domestic consumption of wool shown in Table 32 is determined on the basis of production, exports and imports but does not take into consideration changes in stocks for which the data are not available. Differences in wool utilization from year to year are therefore probably less marked than is indicated by these figures.

² See text above.

Honey.—As shown in Table 33, honey production was 13 p.c. less in 1964 than in 1963. The 1963 crop, however, was the second largest on record after the 45,100,000 lb. produced in 1948. The number of colonies operated was somewhat greater in 1964 than in 1963 but a lower average yield per colony resulted in the decreased output.

Honey is produced commercially in all provinces except Newfoundland and yields tend to vary considerably from year to year. In 1964, Ontario was the largest producer, surpassing Alberta which had the highest production in 1963. Honey bees are kept in some of the fruit growing districts for purposes of pollination and are also used for the pollination of certain seed crops.

To facilitate storage, shipment and uniformity of quality, large quantities of Canadian honey are pasteurized. Beekeepers' marketing co-operatives are active in several provinces. In 1964, 4,915,000 lb. of honey valued at \$1,215,000 were exported from Canada, the main countries of destination being Britain, West Germany, Belgium and Luxembourg, and Norway.

Sugar Beets and Beet Sugar.—Sugar beets are grown commercially in Quebec, Ontario, Manitoba and Alberta and beet sugar factories are located in these provinces. In Quebec, commercial production is centred in the St. Hilaire area of the Eastern Townships; in Ontario, production is confined to the southwestern section of the province. Alberta produces the largest crop and in that province sugar beets are grown under irrigation.

Maple Sugar and Maple Syrup.—Maple syrup is produced in the Provinces of Nova Scotia, New Brunswick, Quebec and Ontario. The bulk of the crop comes from the Eastern Townships of Quebec, a district famous both in Canada and in the United States as the centre of the maple products industry. Virtually all of the maple products exported are sent to the United States with the larger proportion moving as sugar, although substantial quantities of syrup are also shipped. Much of the syrup sold in Canada is marketed in one-gallon cans direct to the consumer from the producer but a considerable amount of both sugar and syrup is sold each year to processing firms.

Nursery Stock.—Statistics concerning the nursery industry in Canada for recent years are presented in Tables 37 and 38. All nurseries were asked to report quantities sold of stock propagated during these years; stock purchased from other nurseries in Canada was excluded to prevent duplication. A total of 217 nurseries reported shipments in 1963. Wholesale value of nursery stock shipments of fruit trees, etc., amounted to \$581,059 in 1963 compared with \$553,725 in 1962, and of ornamental species to \$4,225,891 in 1963 compared with \$4,165,396 in the previous year.

Greenhouse Operations.—Annual surveys have been made of greenhouse operations for 1955 and subsequent years. Data are reported by firms and individuals returning questionnaires, with the exception of that for cucumbers and tomatoes grown in Essex County of Ontario (the most important producing area), which is based on information obtained from the local co-operative marketing agency. Only greenhouses used for the production of items for sale are included in the survey.

¹ Included in Nova Scotia.

² Included in Saskatchewan.

³ Total area of glass and value of vegetable sales for British Columbia not comparable with data for previous years.

Subsection 8.—Prices of Agricultural Products

The monthly index of farm prices of agricultural products was designed to measure changes occurring in the average prices farmers receive at the farm from the sale of farm products. In comparing current index numbers with those before August 1964, certain points should be considered. Western grain prices used in the construction of the index before Aug. 1, 1964 are final prices for all grains. For the remaining months of 1964, the western grain prices used in the index are initial prices. Subsequent participation payments made on the 1964 crops will be added to the prices currently used and the index revised upward accordingly.

40.—Average Index Numbers of Farm Prices of Agricultural Products, by Province, 1960-64, and Monthly Indexes for 1963 and 1964

(1935-39 = 100)

NOTE.—A description of this index, its coverage and the methods used will be found in DBS *Quarterly Bulletin of Agricultural Statistics* (Catalogue No. 21-003) for October-December 1946. Monthly prices of grain and of livestock are carried in the current issues of the same publication.

Subsection 9.—Food Consumption

Food consumption figures represent available supplies, including production and imports, adjusted for change of stocks, exports, marketing losses and industrial uses. All calculations are made at the retail stage of distribution, except for meats for which the figures are worked out at the wholesale stage. The amount of food actually eaten would be somewhat lower than indicated because of losses and waste occurring after the products reach the hands of the consumer. It should also be pointed out that there are minor inaccuracies in certain of the figures since statistics of storage stocks in the hands of retailers and consumers are not available.

All basic foods are classified under 12 main commodity groups. The total for each group is computed using a common denominator for the group, for example: milk solids (dry weight) in the dairy products group; fat content for fats and oils; and fresh equivalent for fruits. All foods are included in their basic form, that is, as flour, fat, sugar, etc., rather than in more highly manufactured forms.

The series in Table 43 represents the official estimates of yearly supplies of food moving into consumption, expressed in pounds per capita, for the years 1958-62 as an average for comparison with the years 1962 and 1963.

43.—Per Capita Supplies of Food Moving into Consumption 1962 and 1963, with Average for 1958-62

Kinds of Food and Weight Base	Pounds per Capita per Annum			Percentages of 1958-62 Average

¹ Fluctuations in apparent per capita flour consumption are caused partly by lack of complete data on flour inventories in all positions. ² Honey included with "other" prior to 1960. ³ Includes soybean flour. ⁴ Tomatoes canned, tomato juice, tomato pulp, paste and purée. ⁵ Exclusive of Newfoundland. ⁶ Includes process cheese. ⁷ Cream powder included in whole milk powder for 1962 and 1963. ⁸ Includes cream expressed as milk. ⁹ Includes evaporated and condensed skim milk, condensed buttermilk, sugar of milk, formula skim milk products and concentrated liquid skim milk.

Disappearance of Meats and Lard.—Production of meats from slaughter in Canada, total supply, distribution and per capita disappearance of meats and lard are shown in Table 44. All estimates are on a carcass-weight basis except canned meats, which are in terms of product.

¹ Quantity small; included with beef. ² Trimmed of larding fat and excluding offal ³ Includes commercial lard production and estimated lard equivalent of renderable pork fat available from all uninspected slaughter.

Section 4.—Agricultural Statistics of the Census*

This Section presents a limited amount of information from the 1961 Census of Agriculture. Details are contained in Vol. V of the 1961 *Census of Canada* and in a number of special and advance census reports. A list of these publications and their prices is available from the DBS on request.

Number of Farms.—There were 16 p.c. fewer farms in Canada in 1961 than in 1956, the year of the immediately preceding census. The number dropped from 575,015 in the earlier year to 480,903 in the later. However, part of this decrease was attributable to a change in the census definition of a farm. In the 1956 (and 1951) Census, a farm was defined as a holding on which agricultural operations were carried out and which was (a) three acres or more in size, or (b) from one to three acres in size and with agricultural production during the previous year valued at \$250 or more. In the 1961 Census, a farm was defined as a holding of one acre or more with the sales of agricultural products during the previous year valued at \$50 or more. On the basis of the 1956 definition, the decrease in the number of farms was from 575,015 to 521,634 in 1961, or about 9 p.c.

* Reference is made to the 1963-64 Year Book for summary figures relating to the economic classification of farms (pp. 478-480) and tenure and age of farm operators (pp. 481-482).

¹ See text immediately preceding table.

Farm Areas.—The total area of farms as defined in the 1961 Census was 172,551,051 acres, only slightly less than the 173,923,691 acres recorded in 1956. Improved farm land for the country as a whole was up 3 p.c. from 100,326,243 acres to 103,403,426 acres and unimproved farm land, which includes woodland and rough pasture, was down about 6 p.c. from 73,597,448 acres to 69,147,625 acres. Decreases in total farm area in the six eastern provinces and in British Columbia offset by almost 1,400,000 acres the increases in total farm area in the Prairie Provinces and the Territories. As Table 46 shows, only Manitoba, Alberta and British Columbia reported more farm land under crops in 1961 than in 1956 but the total increase in these provinces was somewhat less than the total decrease in the other provinces. On the other hand, the total increase in improved pasture in the four western provinces was somewhat greater than the total decrease in the eastern provinces and there was a substantial increase in the acreage under summer fallow for Canada as a whole.

¹ Includes field, vegetable, fruit and nursery crop land.

Size of Farms.—Farms are classified by size and by province in Table 47. More than 56 p.c. of the farms of Canada contain less than 240 acres. Size, of course, varies greatly among the provinces; in Newfoundland almost 90 p.c. of the farms are under 70 acres; in the Maritime Provinces 80 p.c. are under 240 acres; in Quebec and Ontario 67 p.c. are between 70 and 240 acres; in the Prairie Provinces 43 p.c. contain from 70 to 399 acres and 54 p.c. 400 or more acres; and in British Columbia 88 p.c. are between 3 and 400 acres in size.

Persons Employed in Agriculture.—The number of persons employed in agriculture declined in each of the ten provinces during the 1951-61 period. Table 48 shows that the agricultural labour force totalled 648,966 persons for all Canada in 1961, down 20.8 p.c. from the 1951 figure. The 1961 total represented 10.0 p.c. of the total labour force; the proportion in 1951 was 15.5 p.c. The number of farmers and farm workers in relation to the total labour force was highest in the Provinces of Saskatchewan and Prince Edward Island; the proportion was lowest in Newfoundland and British Columbia.

¹ Persons employed on farms and those employed in related agricultural activities such as landscape gardening, groundskeeping, operation of chicken hatcheries, etc.

Farm Machinery and Electrification.—The numbers of most types of machinery on farms increased considerably between 1951 and 1961 as shown in Table 49. However, technological changes were reflected in a reduction in the numbers of such items as threshing machines and grain binders since these types of harvesting equipment are rapidly being replaced by combines.

The proportion of farms reporting electric power increased in all provinces during the same period, although the fact that there were fewer farms resulted in a decrease in the number reporting electric power in certain provinces. The most important increases occurred in Prince Edward Island where the proportion of farms reporting electric power was 22 p.c. in 1951, 40 p.c. in 1956 and 78 p.c. in 1961; in Newfoundland where the increase was from 38 p.c. in 1951 to 44 p.c. in 1956 and 66 p.c. in 1961; in Saskatchewan where the increase was from 16 p.c. in 1951 to 42 p.c. in 1956 and 66 p.c. in 1961; and in Alberta where it was from 25 p.c. to 52 p.c. and 72 p.c. for the same years.

Farm Capital.—While the value of farm land and buildings in Canada increased by more than one half between 1951 and 1961 and the value of farm machinery and equipment increased by about one third, there was a slight decrease in the value of livestock and poultry on farms. Table 51 gives the value of farm capital by province for 1951 and 1961.

*The interpretation of the symbols used in the tables throughout the Year Book
will be found on p. viii of this volume.*

Canada's extensive forests have been an invaluable asset to the country and its people since the earliest days of settlement. The productive portion of these forests has poured increasing wealth into the stream of national income, contributing to the economy of the country as the producer of raw materials for industry and as the source of livelihood for hundreds of thousands of persons. At the same time, the existence of widespread forest cover, productive or unproductive in the sense of human utilization, remains essential to the maintenance of the balance of nature—in protecting water-catchment areas and assuring supplies of water, in lowering the temperature, reducing the velocity of the wind and protecting the land against drought and erosion, and in providing shelter for birds and animals.

Perhaps in no other country is the national wealth so dependent upon its forest resources and the success of its forest industries as in Canada. The annual forest harvest of some 3,424,000,000 cu. feet supports a highly complex and diversified export and domestic industry directly employing more than 300,000 persons and paying out \$1,200,000,000 annually in salaries and wages. The forests support 8,000 sawmills and 4,000 wood-using plants, many of them small units contributing appreciably to the income of local economies. The pulp and paper industry alone stands first among Canadian manufactures in terms of employment, wages paid, new investment and net value of output, and the sale of forest products abroad represents about 27 p.c. of the value of Canada's export trade.

Section 1.—Forest Regions†

The forests of Canada cover a vast area in the north temperate climatic zone. Wide variations in physiographic, soil and climatic conditions cause marked differences in the character of the forests in different parts of the country; hence, eight fairly well defined

* Sections of this Chapter that deal with forest regions, resources and depletion and the federal forestry program were revised by the Department of Forestry, Ottawa. Provincial forestry programs were prepared by the forestry officials of the respective provincial governments. Sections dealing with forest and allied industries, except as otherwise noted, were revised in the Forestry Section, Industry Division, Dominion Bureau of Statistics.

† A map that shows the forest regions is inserted in Chapter I, illustrating the article on the Flora of Canada. A larger-scale, more detailed map is available from the Department of Forestry. A more detailed discussion of forest regions is given in Bulletin 123, *Forest Regions of Canada*, published by the Department of Forestry. Accounts of variations in Canadian physiography and climate are included in a special article on The Climate of Canada, appearing in the 1959 Year Book, pp. 23-51.

forest regions may be recognized. These regions, with the relative proportion of the total area of all forest regions occupied by each, are as follows:—

<u>Region</u>	<u>Percentage of Forest Area</u>	<u>Region</u>	<u>Percentage of Forest Area</u>
Boreal.....	82.1	Acadian.....	2.0
Great Lakes-St. Lawrence.....	6.5	Columbia.....	0.8
Subalpine.....	3.7	Deciduous.....	0.4
Montane.....	2.3		
Coast.....	2.2	TOTAL.....	100.0

Boreal Forest Region.—This Region comprises the greater part of the forest area of Canada, forming a continuous belt from Newfoundland and the Labrador coast westward to the Rocky Mountains and northwestward to Alaska. The white and the black spruces are characteristic species; other prominent conifers are tamarack which ranges throughout, balsam fir and jack pine in the eastern and central portions, and alpine fir and lodgepole pine in the western and northwestern parts. Although the forests are primarily coniferous, there is a general admixture of broadleaved trees such as the white birches and poplars; these are important in the central and south-central portions, particularly in the zone of transition to the prairie. In turn, the proportion of spruce and tamarack rises northward and, with increasingly rigorous climatic conditions, the close forest gives way to the open lichen-woodland which finally merges into tundra. In the east there is, along the southern border of the Region, a considerable intermixture of species from the Great Lakes-St. Lawrence Forest such as the white and the red pines, yellow birch, sugar maple, black ash and eastern white cedar.

Great Lakes St. Lawrence Forest Region.—Along the Great Lakes and the St. Lawrence River Valley lies a forest of a very mixed nature, characterized by the white and the red pines, eastern hemlock and yellow birch. With these are associated certain dominant broadleaved species common to the Deciduous Forest Region, such as sugar maple, red maple, red oak, basswood and white elm. Other species with wide range are the eastern white cedar and largetooth aspen and, to a lesser extent, beech, white oak, butternut and white ash. Boreal species, such as the white and the black spruces, balsam fir, jack pine, poplars, and white birch, are intermixed and, in certain central portions as well as in the east, red spruce is abundant.

Subalpine Forest Region.—This is a coniferous forest found on the mountain uplands in Western Canada. It extends northward to the major divide separating the drainage of the Skeena, Nass and Peace Rivers on the south and to that of the Stikine and Liard Rivers on the north. The characteristic species are Engelmann spruce, alpine fir and lodgepole pine. There is a close relationship with the Boreal Region, from which the black and the white spruces and aspen intrude. There is also some entry of blue Douglas fir from the Montane Forest and western hemlock, western red cedar and amabilis fir from the Coast Forest. Other species found are western larch, whitebark pine, limber pine and, on the coastal mountains, yellow cedar and mountain hemlock.

Montane Forest Region.—The Region occupies a large part of the interior uplands of British Columbia as well as a part of the Kootenay Valley and a small area on the east side of the Rocky Mountains. It is a northern extension of the typical forest of much of the western mountain system in the United States and comes in contact with the Coast, Columbia, and Subalpine Forests. Ponderosa pine is a characteristic species of the southern portions. Blue Douglas fir is found throughout but more particularly in the central and southern parts; lodgepole pine and aspen are generally present, the latter being particularly well represented in the north-central portions. Engelmann spruce and alpine fir from the Subalpine Region together with white birch are important constituents in the northern parts. The white spruce, though primarily boreal in affinity, is also present here. Extensive prairie communities of bunch-grasses and forbs are found in many of the river valleys.

Coast Forest Region.—This is part of the Pacific Coast forest of North America. Essentially coniferous, it consists principally of western red cedar and western hemlock, with abundant sitka spruce in the north and with the addition of Douglas fir in the south. Amabilis fir and yellow cedar occur widely and, together with mountain hemlock and alpine fir, are common toward the timber-line. Western white pine is found in the southern parts and western yew is scattered throughout. Broadleaved trees, such as black cottonwood, red alder and broadleaf maple, have a limited distribution. Arbutus and Garry oak occur in Canada only on the southeast coast of Vancouver Island and the adjacent islands and mainland. These are species whose centres of population lie southward in the United States.

Acadian Forest Region.—Over the greater part of the Maritime Provinces, exclusive of Newfoundland, there is a forest closely related to the Great Lakes-St. Lawrence Region and, to a lesser extent, to the Boreal Region. Red spruce is a characteristic though not exclusive species and associated with it are balsam fir, yellow birch and sugar maple, with some red pine, white pine and hemlock. Beech was formerly a more important forest constituent than at present, for the beech bark disease has drastically reduced its abundance in Nova Scotia, Prince Edward Island and southern New Brunswick. Other species of wide distribution are the black and the white spruces, red oak, white elm, black ash, red maple, white birch, wire birch and the poplars. Eastern white cedar, though present in New Brunswick, is extremely rare elsewhere and jack pine is apparently absent from the upper St. John Valley and the western half of Nova Scotia.

Columbia Forest Region.—A large part of the Kootenay River Valley, the upper valleys of the Thompson and Fraser Rivers and the Quesnel Lake area of British Columbia contain a coniferous forest closely resembling that of the Coast Region. Western red cedar and western hemlock are the characteristic species in this interior "wet belt". Associated trees are the blue Douglas fir which is of general distribution and, in the southern parts, western white pine, western larch, grand fir and western yew. Engelmann spruce from the Subalpine Region is important in the upper Fraser Valley and is found to some extent at the upper levels of the forest in the remainder of the Region. At lower elevations in the west and in parts of the Kootenay Valley the forest grades into the Montane Region and, in a few places, into prairie grasslands.

Deciduous Forest Region.—A small portion of the deciduous forest, widespread in the eastern United States, occurs in southwestern Ontario between Lakes Huron, Erie and Ontario. Here, with the broadleaved trees common to the Great Lakes-St. Lawrence Region, such as sugar maple, beech, white elm, basswood, red ash, white oak and butternut, are scattered a number of other broadleaved species which have their northern limits in this locality. Among these are the tulip-tree, cucumber-tree, papaw, red mulberry, Kentucky coffee-tree, redbud, black gum, blue ash, sassafras, mockernut and pignut hickories, and scarlet, black and pin oaks. In addition, black walnut, sycamore and swamp white oak are confined largely to this Region. Conifers are few and there is only a scattered distribution of white pine, tamarack, red juniper and hemlock.

Section 2.—Forest Resources

The forest area of Canada is estimated at 1,710,788 sq. miles, and about 57 p.c. of that area is capable of producing merchantable timber. The great areas of forest considered commercially non-productive are nevertheless of significant value to the country in the influence they exert on climate, moisture and soil. Table 1 shows the areas of productive and non-productive forest land in each province and territory. Forest land, classified by type of growth and by province, is given in Chapter X at p. 445.

1.—Productive and Non-productive Forest Land, by Province

Province or Territory	Productive Forest Land	Non-productive Forest Land	Total

There are more than 150 tree species in Canada, of which 31 are conifers, commonly called 'softwoods'. About two thirds of these softwoods and 10 p.c. of the large number of deciduous or 'hardwood' species are of commercial importance. Approximately 81 p.c. of the volume of merchantable timber is made up of softwood species. The dominant species existing in each forest region are given in Section 1. Detailed information is contained in Department of Forestry Bulletin No. 61, *Native Trees of Canada*.*

With help from the Federal Government, inventories of the forest resources are made periodically by provincial forest authorities and, with their co-operation, the federal Department of Forestry compiles the National Forest Inventory. The latest estimates of the total stand of timber, by province and region, appear in Table 2. These estimates are subject to constant revision as more accurate and complete inventories are compiled.

The predominant part played by pulp and paper, lumber and other forest product industries in the development of Canada has resulted in a widespread tendency to evaluate the forest in terms of timber alone. However, a growing realization of the economic importance of the forest for its non-commercial values, such as recreation and wildlife and watershed protection, is bringing about increasing recognition of the true value of the forest and is thus developing a broader concept of forestry.

* The sixth edition, 1961, is obtainable from the Queen's Printer, Ottawa, price \$2.50.

¹ Ten inches D.B.H. or over (suitable for saw timber).² Four to nine inches (units of 85 cu. ft.).

Tenure of Forest Land.—Corporations and private individuals own 9 p.c. of the productive forest land of Canada and 91 p.c. is in the possession of the Crown in the right of the federal or the provincial governments. Rights to cut Crown timber under lease or licence have been granted on 23 p.c. of the productive forest land; the remainder comprises unalienated productive forest areas and federal lands such as Indian reserves, military reserves, etc.

Woodlots on the 480,903 farms (1961) across the country comprise about 3 p.c. of the total productive forest. These small wooded tracts, ranging in size from three or four acres to 200 or more acres, are among the most accessible forests in Canada. Also, the woodlots of Eastern Canada are, in general, highly productive because they lie in the southern part of the country and frequently occupy soils that are considerably higher in quality than those typical of the northern forests.

¹ Includes 16 sq. miles of "other" provincial Crown land. ² Of this total, 320 sq. miles are under lease or licence—293 sq. miles in Alberta, the 25 sq. miles in the Yukon Territory, and the 2 sq. miles in the Northwest Territories.

Section 3.—Forest Depletion

General information on forest depletion and increment as well as statistics on forest fires and fire losses are presented in this Section. The scientific control of the influences that account for wastage, such as forest fires, insect pests, etc., is dealt with in Section 5.

The average annual rate and cause of depletion of reserves of merchantable timber during the ten years 1953-62, together with data for the year 1962 are given in Table 4. Of the total depletion of the forests in the ten-year period, 86 p.c. was utilized and 14 p.c. was destroyed by fire. (Information on the extent of damage caused by agencies other than fire, such as insects, disease and natural mortality, is not available.) The average annual utilization of 3,232,353,000 cu. feet comprised 50 p.c. logs and bolts, 40 p.c. pulpwood, over 8 p.c. fuelwood and almost 2 p.c. other products. A little over 4 p.c. of the total utilization was exported in the form of logs and bolts and pulpwood.

The productive forests of Canada covering an area of 967,946 sq. miles constitute the reserve from which forest production will be obtained for many years to come. The supply of merchantable timber on this area is estimated at 751,883,000,000 cu. feet and the utilization in 1962 of 3,432,000,000 cu. feet therefore represented less than one half of one per cent of the supply. However, it should be noted that utilization does not occur evenly throughout the productive forest area but is concentrated on the relatively small area of occupied forest land (land under lease, licence or private ownership). Thus, overcutting may occur on many of these occupied areas, emphasizing the need for orderly management of all commercial forests if the forest industries are to maintain their important position in the Canadian economy. The more efficient utilization of cut timber is an important factor related to forest depletion, for there is little doubt that in the past too high a percentage of the sawn log was discarded. However, changes of great significance have taken place recently in the uses of wood, permitting the utilization of sizes, qualities and species previously considered unmerchantable.

4.—Forest Utilization and Depletion, 1962 compared with Ten-Year Average 1953-62

Item	Usable Wood		Percentage of Total Depletion

Forest Fire Statistics.—There were 7,670 forest fires reported in Canada during 1963 but, although the number was 27.2 p.c. higher than the annual average for the previous ten years, fire losses were light. The total area burned was only 17 p.c. of the ten-year

average. Losses of saw timber and pulpwood volumes were only 9 p.c. and 25 p.c., respectively, of average losses. Estimated in monetary terms, damage amounted to less than half the annual average.

¹ Not reported.

² Included in provincial figures.

In 1963 lightning accounted for 31 p.c. of all forest fires and 51 p.c. of the total area burned. Thus, more than two thirds of the fires and nearly one half of the area burned resulted from human error. Persons engaged in recreational activities were responsible for the greatest proportion of man-caused fires.

Section 4.—Statistics of Forest and Allied Industries*

This Section is concerned with the many industries employed in the felling of timber in the forest and its transformation into the numerous utilitarian shapes and forms required in modern living. The basic industries provide the raw materials for sawmills, pulp and paper mills and for a wide range of secondary industries that convert the products of the basic industries into more highly manufactured goods such as veneers and plywoods, sash and doors, furniture, and a vast range of industries using wood in any form in their processes. These industries, especially the pulp and paper industry and the lumber industry, contribute substantially to the value of the export trade of Canada and thereby provide the exchange necessary to pay for a large share of the imports purchased from other countries, particularly the United States.

Statistics of employment, salaries and wages paid, value of shipments, etc., in the wood industries as a whole are shown for Canada and the provinces in Chapter XVI on Manufactures; these figures and those included in the following tables are based on the revised standard industrial classification and new establishment concept, explained in the Manufactures Chapter.

Subsection 1.—Woods Operations

The forests of Canada provide the raw materials for its sawmills, pulp mills, veneer mills, charcoal, excelsior and other plants, as well as the logs, pulpwood and bolts for export in unmanufactured state, and fuelwood, poles, railway ties, posts and fence rails, mining timber, piling and other primary products that are finished in the woods ready for use or export. Minor forest products, such as Christmas trees, help to swell the total.

Tables 8 and 9 show the distribution of the estimated volume of wood cut in the forests of Canada in recent years by province and by type of product.

* The 1965 Year Book, at pp. 511-517, includes a special article on "Canadian Forest Products and Changing World Markets".

¹ In estimating the annual cut, certain factors have been used to convert commercial units to cubic feet. The factor for logs and bolts for the British Columbia coastal region is 175 cu. ft. per M ft. b.m. logscale and for the remainder of Canada 200; the factor for rough pulpwood and round mining timber is 85, for fuelwood and wood for charcoal 80, poles and piling 15, hewn railway ties 5, fence posts 1.2 and fence rails 1.

Subsection 2.—Wood Industries

Sawmill Industry.—Lumber is by far the most important single product of the sawmill industry (which includes tie mills) in both quantity shipped and value. Table 10 gives provincial production, shipments and value of lumber from sawmills in addition to the value of shipments of all sawmill products and by-products in 1963. The quantity and value of lumber shipments from sawmills, by species, is shown in Table 11. It may be noted that the quantities of lumber produced are much higher than the quantities shipped; this is mainly due to the fact that a considerable volume of lumber is custom sawn by mills (classified in the sawmill industry) for the account of planing mills (classified in the sash, door and planing mill industry), or for wholesalers and dealers who report the corresponding shipments.

10.—Lumber Production and Shipments and Value of All Shipments of the Sawmill Industry, by Province, 1963

Province or Territory	Lumber			Value of Shipments of All Products and By-products

Shingle Mills.—Most of the shingles and shakes produced in Canada are from British Columbia mills. Of the total of 2,139,000 squares valued at \$25,146,000 shipped in 1963, British Columbia produced 2,109,000 squares valued at \$24,948,000; Quebec, 18,000 squares valued at \$125,000; and the Maritime Provinces, 12,000 squares valued at \$73,000.

Veneer and Plywood Industries.—The production of hardwood veneer and plywood in Canada is confined largely to the eastern provinces and softwood veneer and plywood are produced almost entirely in British Columbia. For the latter, Douglas fir is most commonly utilized because of the availability of large-diameter logs of this species from which large sheets of clear veneer can be obtained. At the same time, veneers of Canadian manufacture are not confined to species native to Canada. A number of imported woods of decorative value are veneered successfully and provide the builder and furniture manufacturer with a wide choice of materials. These products have become almost indispensable in construction and the manufacture of many common products and output continues to increase to supply the heavy demand from both domestic and export markets. Exports of veneer and plywood produced in Canada reached a record \$66,660,484 in 1964.

Other Wood Industries.—There are nine separate industries, other than the saw-mills, the shingle mills and the veneer and plywood mills, included in the "wood industries", most of which obtain from the sawmills and veneer and plywood mills the raw materials that they transform into planed or matched lumber, doors, windows, laminated structures, prefabricated buildings, boxes, barrels, caskets, etc. The wood industries, however, do not include every industry into which wood enters as a raw material; wood is an important raw material in the manufacture of furniture, agricultural implements, musical instruments, etc., industries which, as proven by experience, are more correctly classified under other groups.

Among the nine industries, the sash, door and planing mills group and the hardwood flooring group are the most important, accounting for about 75 p.c. of the shipments of goods of own manufacture and of the revenues and custom work reported by these industries. These two groups, producing products required in the construction of houses and apartments, have shared in the high activity in that field in recent years. In 1963, the value of sash, windows and window units shipped was \$36,365,000, of wooden doors \$26,273,000, and of window or door frames \$6,526,000; shipments of hardwood flooring were 66,430 M ft. b.m. valued at \$11,785,000, and of parquet flooring or hardwood tiles 10,492,000 sq. feet valued at \$1,857,000. Production by the sash, door and planing mill group was down slightly from 1962 but that by the flooring group continued its upward trend. Other important products of the wood-using industries included planed and matched lumber amounting to 1,228,341 M ft. b.m. valued at \$90,119,000, laminated structures valued at \$8,272,000, kitchen cabinets and units valued at \$13,676,000, and prefabricated buildings at \$17,930,000.

Subsection 3.—The Pulp and Paper Industry

The manufacture of pulp and paper has been the leading industry in Canada for many years and the postwar development of the industry has more than kept pace with the vast industrial growth of the nation. Pulp and paper stands first among all industries in net value of shipments, in exports, in total wages paid and in capital invested. It is the largest consumer of electric energy and the largest industrial buyer of goods and services, including transportation, in the land. The industry has a newsprint output more than

three times that of any other country and provides over 41 p.c. of the world's newsprint needs. Among Canada's exports, the value of newsprint is larger than that of any other single commodity, the United States absorbing 87 p.c. (1963).

There are three classes of mills in the industry; in 1963, 28 were making pulp only, 24 were making paper only and 74 were combined pulp and paper mills. The industry includes several forms of industrial activity—operations in the woods with pulpwood as a product, the manufacture of pulp and paper of all kinds, and the manufacture of paperboards. Some of the important pulp companies operate sawmills to utilize the larger timber on their limits to the best advantage, and some lumber manufacturers divert a portion of their spruce and balsam logs to pulp mills. Only a small percentage of the pulpwood cut in Canada is exported in raw or unmanufactured form.

Some plants that are included in the pulp and paper industry also convert paper into stationery and other processed paper products, but this conversion within the pulp and paper industry represents only a small part of Canada's production of converted papers and boards, the bulk of which is made in special converting mills classified in other industrial groups. Principal statistics of these industries are given in Chapter XVI on Manufactures.

13.—Production, Consumption, Exports and Imports of Pulpwood, 1957-63

Year	Production ¹	Pulpwood Used in Canadian Mills ¹	Exports	Imports

1963.....	15,547 ^p	14,982	1,113	130

¹ Given in terms of rough or unpeeled wood; not including wood residue.

Pulp Production.—The manufacture of pulp, the second stage in this industry, is carried on by mills producing pulp only and also by paper manufacturers operating pulp mills in conjunction with paper mills to provide their own raw material. Such mills usually manufacture a surplus of pulp for sale in Canada or for export. Spruce, supplemented by balsam fir in the east and by hemlock in the west, is the most suitable species for the production of all but the best types of paper.

The preliminary preparation of pulpwood is most commonly carried on at the pulp mill although there are a number of rossing mills operating on an independent basis, chiefly for the purpose of saving freight on material intended for export. Pulpwood is commonly measured by the cord (4' by 4' by 8' of piled material). One cord of rough pulpwood contains approximately 85 cu. feet of solid wood, and one cord of peeled pulpwood 95 cu. feet.

The manufacture of the 12,474,107 tons of pulp produced in 1963 entailed the use of 14,982,487 cords of rough pulpwood and the equivalent of 2,947,060 rough cords of other wood (i.e., sawmill chips, slabs and edgings, sawdust, butts, cores, etc.).

14.—Mill Shipments of Pulp, Mechanical and Chemical, 1957-63

World Newsprint Statistics.—Since 1913 Canada has led the world in the export of newsprint. Figures for the leading producing countries for the two latest years available are given in Table 21 and 1939 figures are included for comparative purposes. The six countries listed accounted for over 71 p.c. of the estimated world production in 1963, Canada contributing over 41 p.c.

Subsection 4.—Paper-Using Industries

The paper-using group is comprised of five industries (asphalt roofing manufacturers, folding box and set-up box manufacturers, corrugated box manufacturers, paper bag manufacturers, and miscellaneous paper converters) engaged primarily in manufacturing commodities of paper and paperboard. Establishments engaged in printing, publishing, bookbinding and the allied graphic arts also consume large quantities of these materials but are grouped separately on p. 533.

Some paper-using establishments purchase paper as a raw material from the pulp and paper industry and merely subject it to some form of treatment to fit it for further manufacture in another industry; this occurs in the manufacture of coated, sensitized or corrugated paper. Other firms purchase paper and subject it to treatment to fit it for a definite final use such as in the manufacture of asphalt roofing or waxed wrapping paper. Another large group uses paper and paperboard as a raw material for conversion into paper bags, boxes, envelopes and other commodities.

The manufacture of containers and packages of various kinds has grown very rapidly since ways have been found of converting tough and cheap paper stocks into strongly made boxes which are replacing wooden crates and packing cases. Small attractive paper containers for use in the retail trade are now in common use and their manufacture constitutes an important branch of the paper-using industries. A number of establishments specializing in the production of plastic bags (cellulose, polyethylene, etc.) are included with the paper bag manufacturers.

Composition roofing and sheathing, consisting of paper felt saturated with asphalt or tar and in some cases coated with a mineral surfacing, is being used increasingly as a substitute for metal roofing, wooden shingles and siding materials. Establishments classed as roofing manufacturers also produce a large proportion of the floor tiles manufactured in this country.

Important products manufactured by establishments classed in the miscellaneous paper converters industry are envelopes, waxed paper for packaging, clay coated and enamelled paper and board, aluminum foil laminated with paper or board, paper cups, facial tissues, sanitary napkins, paper towels and napkins, food trays, toilet tissue, etc. Principal statistics of the paper converting industries are given in Chapter XVI on Manufactures.

Printing, Publishing and Allied Industries.—The printing, publishing and allied industries group is made up of six closely related industries: printing and bookbinding, including commercial printers and bookbinders; lithographing, comprised of commercial printing plants using principally the offset printing process; engraving, stereotyping and electrotyping, including photo-engraving; trade composition or type-setting for printers; printing and publishing, comprised of publishers who operate printing plants; and "publishers only", including establishments primarily engaged in publishing and which do no printing.

The revenue resulting from the manufacturing activities of all establishments classed in this group (excluding revenue from auxiliary activities such as trade, etc.) amounted to \$960,525,000 in 1963, an increase of nearly 4 p.c. over 1962. The revenue from commercial and specialty printing was up about 6 p.c. to \$449,012,000 in the same comparison. The important individual revenue items to commercial printers in 1963 were printed advertising (\$103,082,000), the printing of newspapers and periodicals for publishers (\$44,713,000), continuous forms and individual gummed sets (\$44,310,000), printed books and blank books (\$32,467,000), greeting cards (\$21,972,000), and tags, shipping and merchandise (\$20,647,000).

The revenue from publishing (publishing and printing or publishing only) advanced to \$449,839,000 from \$438,672,000 or by 2.5 p.c. The advertising revenue to publishers of newspapers and periodicals of all kinds was \$313,307,000, the net revenue from sales or subscriptions was \$107,032,000, and the revenue from book publishing \$28,157,000, all of which items were substantially higher than in 1962.

Other revenues reported within this group of industries resulted mainly from specialized services such as plate-making, type-setting, etc., and showed little variation in total from the preceding year.

Section 5.—Forest Administration, Research and Conservation

Subsection 1.—Federal Forestry Program

Administration.—The Federal Government is responsible through several departments and agencies for the protection and administration of the forest resources of the Yukon and Northwest Territories and of other federal lands such as the National Parks, Indian reserves, military areas and forest experiment stations.

Under the Department of Forestry Act (SC 1960, c. 41), the Minister of Forestry's duties, powers and functions extend to and include "all matters over which the Parliament of Canada has jurisdiction relating to the forest resources of Canada". The main functions of the Department in the forestry sphere include: (1) provision for the conduct of research relating to the protection, management and utilization of the forest resources of Canada and the better utilization of forest products; (2) undertaking, promoting or recommending measures for the encouragement of public co-operation in the protection and wise use of the forest resources of Canada; (3) co-operating with provincial governments and others by means of agreements relating to forestry matters; (4) provision of forest surveys and advice relating to the protection and management of federally administered forest lands; and (5) assuming responsibility for forest protection and management on federal lands at the request of the department or agency concerned. The Act provides for the establishment of research facilities and of forest experimental areas on federal lands.

Effective Apr. 1, 1965, recommendations of a major departmental reorganization study were implemented, eliminating the previous Branch structure of the Department and creating a framework designed to produce better co-ordination of research effort.* To meet its forestry responsibilities, the Department now maintains an Advisory Group to the Deputy Minister, whose main responsibilities are to develop policies and long-range plans for forest research, forest products research, forest economics and other such matters as federal-provincial relations and liaison with the forest industries and the academic community. A Directorate of Program Co-ordination provides national co-ordination of forestry research programs and supervises national research services at Ottawa. Research institutes and laboratories plan and execute fundamental research within prescribed fields, supporting and complementing the regional research programs carried out in the Department's seven administrative regions—Newfoundland, the Maritimes, Quebec, Ontario, Manitoba-Saskatchewan, Alberta-Yukon Territory-Northwest Territories, and British Columbia. The Department conducts forest surveys on federal lands throughout Canada and provides advice and assistance regarding forest management to the administering agencies. It also provides for the management of forests including timber disposal in certain areas on behalf of other government departments, the most important of these being the military training area, Camp Gagetown, in New Brunswick. Co-operation is extended to the External Aid Office in administering technical assistance programs involving forest surveys in other countries. The Department maintains comprehensive information, editorial and library services. The public information program includes the production and distribution of a number of publications designed to increase public awareness of the importance of Canada's forest resources and the need for conserving them; the distribution of research publications and the interpretation of the scientific work of the Department to industry and the general public; the dissemination of departmental and forestry information to the press, radio and television; the production of exhibits, displays and posters; and the maintenance of a photographic library dealing with forestry subjects.

The Department's Research functions and the Federal-Provincial Forestry Agreements program are described in the following paragraphs.

* The Department of Forestry also includes, under the administration of a separate Assistant Deputy Minister, a division responsible for rural development under authority of the Agricultural Rehabilitation and Development Act (ARDA) and the Maritime Marshland Rehabilitation Act, described at pp. 448-450; the administration of the Feed Grain Assistance Regulations, described at p. 466, is also a responsibility of the Department.

Research on Silviculture, Tree Biology and Fire.—The objects of such research are (1) to provide basic information on the characteristic occurrence, growth, development and behaviour of forest tree species throughout the wide range of forest types and environmental conditions of Canada and (2) to develop and test new or improved methods for use in forest management and forest fire control. The programs are conducted through the seven regional offices across Canada, often in co-operation with other federal departments, provincial forest authorities, other research agencies, universities and industry.

Many of the silvicultural studies involve (a) assessing the factors responsible for the success or failure of natural regeneration following various cutting methods and treatment of seedbeds, (b) comparing different methods of seeding and planting, and (c) determining the effects of different methods of intermediate cutting on the development of residual trees and stands. Studies are made of successional changes in most of the important forest types. Application of silvicultural techniques as well as research in regulation of cut and in methods of protection is aimed at determining how forests may be maintained at the highest levels of production. The relationships between forest growth and site are being studied with a view to the assessment of long-term productivity. The requirements of light, temperature and moisture that will produce optimum conditions for growth and development are being determined for the seedlings of many important species of trees. The physiological processes of growth and reproduction are under investigation for a limited number of species. In tree breeding, superior strains are selected or developed and there is a continual improvement in propagation and breeding techniques. Research in forest land encompasses forest geography and land classification. Research in soils is directed toward determining the relation of tree growth and nutrition to chemical and physical properties of the soil.

Techniques used in mensuration are constantly under review and study; new methods are tested and developed. Research in forest inventory methods is of increasing importance because of the continuing programs of forest inventories being conducted in most provinces and in the northern Territories. Data from air photographs are correlated with field observations to develop new techniques for estimating timber. The use of stand volume tables and of field sampling methods is being investigated and compared. Research is continuing in methods for measuring tree images and tree shadows to determine heights, crown widths, canopy density and other data from photographs taken in different seasons of the year under various conditions. The use of large-scale photography of sample areas is also being investigated and studies are being made in the identification of species and sub-types.

Adequate protection of forests against fire is of vital importance in Canada. The Department works in full co-operation with provincial forest services in almost all phases of forest fire control and has made major contributions in the fields of forest fire danger measurement and forecasting and in fire control planning. Investigations are being made of forest fire behaviour, of the use of prescribed fire for hazard reduction and seedbed preparation, of better methods of reporting forest fires, and of fire damage appraisal and related factors in forest protection standards. Studies are being continued in the use of chemicals for fire suppression and pre-suppression, of fire fighting equipment and techniques, and of the use of aircraft in forest fire control. Another important field of endeavour is the study of lightning and other fire causative agencies.

Forest Products Research.—This work is directed toward obtaining background data on the properties of Canadian woods, developing new and better uses for wood products, improving manufacturing processes, and effecting more complete utilization of wood substances. Activities cover every aspect of forest products except paper and include the determination of the physical, mechanical and chemical properties of wood and their relation to adaptability in use; studies of factors affecting quality of wood and of manufactured wood products; determination of factors that cause wood waste in logging and manufacturing; investigation into fire retardant treatments, the preservative treatment and painting of wood and the use of wood for the manufacture of cellulose, wallboards,

alcohols, organic acids, and extractives; studies to determine possible new economic and more valuable uses for woods; and research to determine methods and means for the economical utilization of all wood substances available from the annual timber harvest.

The program is conducted at two laboratories—at Ottawa and Vancouver—with units consisting of timber engineering, containers, glues and gluing, veneer and plywood, timber physics, wood chemistry, wood preservation, paints and coatings, wood pathology, wood anatomy, logging, lumber manufacture and lumber seasoning. Research results are made available to the thousands of plants comprising Canada's timber-manufacturing and wood-using industries. Liaison is maintained with these industries to ensure that the research being conducted is of optimum national benefit, and assistance is received from a National Advisory Committee comprising representatives of lumber manufacturers and other wood-using groups. There is also constant co-operation with various government units in the performance of many investigations concerned with the use of wood. Research into the use of wood in housing construction and as an engineered material continues in co-operation with the National Research Council and the Central Mortgage and Housing Corporation.

The Department's industrial liaison officers visit sawmills and other wood-working plants to keep industry aware of research developments and technical advances and, on the other hand, to keep the laboratories informed of field problems on which research would be of value. Departmental personnel serve on many national and international technical committees concerned with forestry problems and continuous collaboration is maintained with forest products laboratories in other countries for the dual purpose of exchanging information and avoiding duplication of research.

Forest Insects and Diseases.—Research on forest insects and diseases is conducted at regional laboratories and field stations in all principal forest regions of Canada. A Canada-wide survey is undertaken in co-operation with the provincial forest services and forest industries to maintain an annual census of forest insect and disease conditions and to detect and predict the occurrence of outbreaks. Survey results are made available to owners and operators of forest lands for use in planning salvage programs and directing control measures to reduce damage.

The research programs of the regional laboratories are designed to lead to comprehensive understanding of the biology and ecology of the more destructive forest insects and fungi, and the causes of fluctuations in abundance or severity of damage in time and place. Problems under intensive study include insect defoliators, leaf diseases, sucking insects, dwarf mistletoes, stem cankers, bark- and wood-boring beetles, trunk and root decays, tip- and root-boring insects, diseases of tree seedlings in forest nurseries and virus diseases of forest trees. Laboratory research on development, physiology, nutrition and taxonomy complements the field ecological studies of insects and fungi. Problems of national importance in insect pathology, cytology and genetics, bioclimatology and chemical control are investigated.

Experiments are also carried out in insect and disease control, utilizing cultural techniques, chemicals and biological control agents including parasites, predators and insect pathogens. Technical advisory services are provided in evaluating possibilities of eradication or control, or other applications of research results. Examples include recommendations for reduction of seedling losses in forest tree nurseries through cultural techniques and chemical applications; the co-operative organization of cull surveys to improve forest inventories; consultation with local authorities on the Dutch elm disease problem; and technical co-operation with provincial governments and industrial agencies in the organization of spraying operations against the spruce budworm in New Brunswick, the jack pine sawfly in Quebec, and the hemlock looper and ambrosia beetle in British Columbia.

Federal-Provincial Forestry Agreements.—The passing of the Canada Forestry Act in 1949 was an event of great significance to federal-provincial relations in the field of forestry, as authority was given to the then Minister of Mines and Resources to "enter into agreements with any province for the protection, development or utilization of forest resources". Subsequently, this Act was repealed and replaced by the Department of Forestry Act, 1960. Since the beginning, agreements have been entered into with most provinces; these now provide for federal financial support for programs of forest inventories and reforestation, for the purchase of capital assets to be used in forest fire protection and for forest access and stand improvement projects.

Under the Department of Forestry Act, a composite forestry agreement was entered into with the provinces for a term of two years ending Mar. 31, 1967. This agreement includes in "a single package" the federal aid available for forest inventories, reforestation, forest fire protection, forest access and stand improvement projects. The composite agreement also gives the provinces considerably greater freedom to allocate funds among the specified fields of work. A total of \$7,910,000 of federal funds is available annually, the allocation to the provinces being in proportion to their productive forest areas.

Federal assistance is based on payment of 50 p.c. of provincial costs, but reforestation is the one exception. The Federal Government pays \$15 per thousand trees planted, \$4 per acre seeded with ground preparation, \$2 per acre seeded without ground preparation, and \$2 per acre for seedbed preparation to promote natural regeneration. In addition, the Federal Government contributes 25 p.c. of the cost of establishing or expanding forest nurseries.

Costs of management-type surveys are included in the new agreement as sharable, and the reforestation of occupied or unoccupied Crown land qualifies for assistance provided it is carried out by the province.

Since 1951, more than \$48,000,000 in federal funds have been contributed to the provinces under the main forestry agreements, plus \$5,613,000 for aerial spraying against budworm infestations in New Brunswick and, on a smaller scale, in British Columbia, and \$643,000 under a special stand improvement agreement with the Province of Nova Scotia, designed to provide woods experience for coal miners laid off in the Cape Breton area.

Work accomplished with federal assistance has included the completion of forest inventories by seven provinces. Most of the provinces have instituted programs concerned with management-type inventories and at the same time are maintaining their initial inventories in a reliable state. As a result of these inventories, new woods operations have sprung up, particularly in the British Columbia interior, and new pulp and paper mills have been built or are planned in other areas of Canada. The Federal Government has contributed under the agreements to the establishment of 16 new forest nurseries and the planting of 265,700,000 trees. Federal contributions of more than \$12,686,000 have been used for the purchase of fire towers, radios, motor vehicles, bulldozers, muskeg tractors, power pumps, hand pumps, hose, aircraft, and the construction of buildings required for the prevention, detection and suppression of forest fires and for the charter of aircraft for patrol, transportation and water-dropping purposes. Several hundred access projects designed to improve protection and permit the management of undeveloped forest areas have been undertaken, with the Federal Government contributing more than \$18,723,000.

Subsection 2.—Provincial Forestry Programs

All forest land in provincial territory, with the exception of the minor portions in National Parks, federal forest experiment stations, military areas and Indian reserves is administered by the respective provincial governments. The forestry program of each province is outlined below.

Newfoundland.—Geographically, the Province of Newfoundland has two separate regions—the Island and Labrador on the mainland. The productive forest land of the

Island is estimated at 12,984 sq. miles and of Labrador at 20,878 sq. miles, a total of 33,862 sq. miles. Most of Labrador's forests are leased but are as yet virtually untouched. Only 578 sq. miles are classified as farm woodlots.

A large part of the forest land in the interior of the Island is leased, licensed or owned by paper companies, but a three-mile-wide belt along most of the coastline is retained as unoccupied Crown land for the purpose of providing firewood, construction material, fencing material, etc., for the local population. Within this coastal forest belt, every household has legal right to cut 2,000 cu. feet of wood a year for domestic use. This form of cutting is generally without intense control or restriction but a policy is being introduced whereby cutting in certain 'management areas' is controlled by forest officers. Approximately one half of the Crown forests are at present under management. Commercial timber-cutting on unoccupied Crown lands has been by permit since 1952; permits for amounts up to 120 cords per person are issued by the field staff but permits for larger quantities must be approved by the government. This type of permit is generally preceded by advertising of standing timber for sale by tender, the timber involved usually being over-mature or damaged by fire, insects or storms.

The Island is divided into three forest regions, each of which is subdivided into five districts. Each region is under the control of a regional forester and each district is headed by a district ranger with a staff of rangers and assistant rangers. Twenty-eight well-equipped forest fire depots and 21 lookout towers, connected by radio-telephone, are operated by the Newfoundland Forest Service; others are operated by the Newfoundland Forest Protection Association, the two paper companies, and the Canadian National Railways. The Forest Service operates four Canso aircraft equipped for water bombing, two helicopters for transporting men and equipment and two Super Cub aircraft for fire detection.

Forestry operations in Labrador are under the supervision of a regional ranger located at Happy Valley (Goose Airport). The permanent staff of about 75 persons is augmented by a like number of seasonal employees during the fire season. Forest fire protection bases are established at Northwest River near Goose Airport and at the Carol Lake mining development area. The two paper companies maintain their own fire protection organizations.

Prince Edward Island.—Almost all of Prince Edward Island's woodland is privately owned, so that the Forestry Division of the Department of Agriculture is concerned mainly with planting, woodlot management and fire protection. A small nursery, established jointly with the Federal Government, deals with the Island's needs by providing planting stock for the reforestation of waste lands, the cost of which is shared by the Federal Government, and fulfilling the requirements of private individuals at a reasonable cost.

In proportion to its size, Prince Edward Island exports a great deal of pulpwood. This export, combined with the fuelwood and lumber cut each year, led to the inauguration of a program designed to educate the owner in the proper care and management of his woodlot.

Fire protection does not usually constitute too great a problem. Wooded areas are scattered in patches throughout the province and, since a network of roads makes all woodlots accessible, equipment can be brought to the scene of a fire quickly and easily. Research is limited mainly to reforestation and woodlot management problems.

Nova Scotia.—The land area of Nova Scotia is 20,402 sq. miles. Of this area 16,274 sq. miles are classed as forested, of which 93 p.c. is regarded as productive. Although 91 p.c. of the forest land in Canada is held by the Crown in the right of the federal and provincial governments, only 22 p.c. is held under the Crown in Nova Scotia.

The provincial Crown lands are administered by the Department of Lands and Forests through a staff of foresters and rangers. Similarly, trained personnel are employed with some of the forest industries in the administration of privately owned forest lands. The

Department administers the Lands and Forests Act as it pertains to all lands and is responsible for forest fire suppression. Forest fire detection is facilitated through 29 observation towers and an aerial patrol service, all integrated with land vehicles and headquarters by radio and telephone communication systems. Fire suppression crews and rangers with equipment are stationed throughout the province.

The forest industry is of prime importance to the economy of Nova Scotia. There are in operation some 500 sawmills of various types and sizes, one newsprint mill, two groundwood pulp mills and a chemical pulp mill; construction of a second chemical pulp mill was under way in mid-1965. These mills, along with the export pulpwood trade and pitprop production, produced about 270,500 M ft. b.m. of sawn materials and about 608,000 cords of round products in 1964. Twenty-six sawmills were equipped for the production of pulp chips from sawmill residue and the equivalent of about 68,000 cords of chips was produced from slabs and edgings.

The reforestation program, which has been active for many years, is being expanded with respect to non-forested land and experimental work on land preparation on fire barrens is being conducted. In 1964, approximately 1,000,000 trees were removed from the six forest nurseries for planting in the field, mostly on non-forested land.

Forest management programs include the construction of access roads into Crown land timber areas and stand improvement under federal-provincial agreements. Timber, pulpwood and Christmas trees are sold through public tender and cutting on Crown land is done under recommendation of district foresters of the Department of Lands and Forests. Management cruises, regeneration studies and experimental cuttings are conducted on Crown lands and an active program of operating these lands under sustained-yield management plans is well under way.

Forest research is carried on by Federal Government agencies and the Nova Scotia Research Foundation. Investigations involve stand improvement, cutting methods, and insect and disease activities. Extension projects include fire prevention, a film program in schools, distribution of information on forest and wildlife conservation, promotion of the Christmas tree industry, woodlot improvement, preparation of material for the mass media, and technical assistance to sawmill operators.

New Brunswick.—Of the total land area of New Brunswick (27,835 sq. miles), approximately 86 p.c. is classed as productive forest, of which the Crown, in right of the province, owns about one half. About 2 p.c. is owned by the Federal Government and the remainder is privately owned. The report of a provincial forest inventory, part of the national forest inventory, was published in 1958. The total volume of wood in merchantable sizes is estimated at 16,900,000,000 cu. feet; coniferous species make up 71 p.c. and deciduous species the remainder.

Protection from forest fires, the first requirement for forest conservation, is mainly the responsibility of the Department of Lands and Mines which also carries out duties in connection with game management and protection, colonization, provincial parks, and the administration of provincial Crown lands. A large-scale aerial spraying program to protect balsam fir and spruce from the spruce budworm has been carried on since 1952 by a Crown company sponsored by the federal and provincial governments and by representatives of the forest products industries. Forest Management Licences issued by the province authorize operators to cut and remove forest products in accordance with forest management plans and cutting permits. Stumpage dues are paid to the province when products are cut by the licensees.

New Brunswick does not maintain a forest research organization but co-operates with the federal Department of Forestry in that field. The University of New Brunswick has also undertaken a small number of forest research projects in co-operation with the National Research Council, the provincial government and other interested organizations.

In the field of education, the University of New Brunswick offers undergraduate and graduate courses in forestry leading to B. Sc.F. and M. Sc.F. degrees. It is also responsible

for the administration of the Maritime Forest Ranger School in conjunction with the governments of New Brunswick and Nova Scotia and with private industry. The forest extension services of the University assist both government and private agencies in the direction and planning of various forestry extension programs. The provincial Department of Agriculture also provides an expanding extension service to the owners of farm woodlots.

Quebec.—The forest lands of the Province of Quebec cover an area of 270,418 sq. miles extending from its southern borders to latitude 52° north, between the frontier of Labrador in the east and the Eastmain River Basin in the west. Of this total, 85,451 sq. miles are classed as occupied productive forest land, where tree-felling is done under lease and permit. The area owned privately covers 25,114 sq. miles and federal Crown forests, 225 sq. miles. Approximately 117,481 sq. miles of the productive forest lands of Quebec are unoccupied. About one third of the annual cut comes from privately owned lands.

The limits reserved for forest industries are administered by the Department of Lands and Forests and the technical work such as inventory, reforestation, supervision of cutting, control of culling, verification of plans for development, collection of stumpage dues, etc., is the responsibility of the Forest Service. These limits are either leased by auction after public notice has been given or assigned under a special law. The price of the licence is fixed by auction or by Order in Council subsequent to specific legislation. The government reserves the right to dispose of any water power available on the limits leased. A tree-felling permit, which is valid for one year, is renewable if the holder has complied with the conditions imposed; it may be transferred with the authorization of the Minister of Lands and Forests. The lessee of a limit must pay a ground rent in addition to the price of licence and must forward, three months before the cutting begins, a plan of operations. Wood cut must be measured by a licensed culler and at the end of the operations the limit holder must produce a sworn statement of quantities cut. The Forest Service endeavours to promote the use of silvicultural methods among the owners of farm woodlots and small forest areas.

Quebec's forest protective system comprises three organizations—the Protective Service, the protective associations and the non-affiliated lease holders or owners. The Protective Service is a government body established within the Department of Lands and Forests in 1924 to enforce legislation and regulations governing forest fire protection and to protect vacant Crown lands, township reserves and colonization territories. The protective associations, of which there are six, are syndicates of lease holders and of owners who have availed themselves of their right to form an association to satisfy the law which compels them to protect their limits or private forests of 2,000 acres or over. Members assume operating expenses in proportion to the area owned by each, but the Department assumes half the costs of fire fighting incurred by the associations. The third group is composed of lease holders and of owners who prefer to discharge their obligations personally as far as forest protection is concerned. They enjoy the same privileges and their obligations are the same as those imposed upon the associations.

To perpetuate the forestry program of the province, the Forestry Department has established a number of nurseries. The first, established at Berthierville in 1908, has three sections—one wooded with a variety of valuable species of mature age, one serving agricultural purposes, and one devoted to forestry experiments and the cultivation of trees for reforestation. The Grandes Piles and New Carlisle nurseries were organized more recently and there are also nurseries in the following counties: Abitibi-Est, Témiscamingue, Îles de la Madeleine, Rimouski, Roberval, Rivière-du-Loup, Témiscouata, Chicoutimi, Abitibi-Ouest, Portneuf and Matapédia. Their object is the preparation of plants for reforesting nearby districts. 'Floating' nurseries, supervised by the engineers of the Forest Extension Bureau and intended especially for growing reforestation plants for private properties, are located at Sweetsburg, St. Pascal, Mont Joli, Baie St. Paul, Pont Rouge, Victoriaville, Scott and Sherbrooke. Plants are supplied free of charge on request. A dynamic reforestation program is now under way in the province, with an ultimate objective for the next ten years of 200,000,000 plants on Crown and private lands.

The Bureau of Silviculture and Botany, an integral part of the Forest Service, is a research organization. At present it is conducting silvicultural experiments in various areas of the province, in natural forests as well as in plantations, to find solutions to the many problems encountered in the work of improving the forest stand. This work is controlled by a network of permanent study points throughout the province. The Bureau has at its disposal a soil and plant tissue analysis laboratory and a forestry pedologist for the study of problems dealing with mineral foods for plantations, reforestation and silviculture.

Ontario.—The management of the forest resources of Ontario is based upon the Crown Timber Act and the management unit is used as the basic administrative area. For each management unit a plan is prepared according to the Manual of Management Plan Requirements and is submitted to the Minister of Lands and Forests for analysis and approval. All forest activities contemplated during the operating period—cutting, re-establishment and tending—are listed in detail in the operating plan, which is part of and carries out the intent of the management plan. Management plans are revised every 20 years on the up-to-date data of new aerial photographs and a forest re-inventory. The number of management units is subject to change at the time of plan revision owing to abandonment or acquisition of timber licences and to division or consolidation of management units. During 1964, 213 management units, classified by ownership and the rights to timber, were recognized: 81 Crown management units, 71 company management units, 56 agreement forest units, and five nursery forest units. The 81 Crown management units for which the plans are prepared by Department staff occupy 55,999,775 acres; of these, one is operating under a revised plan, 22 are undergoing scheduled plan revision, 56 are operating under the initial plan, and two new units are not under management plans. The 71 company management units for which the management plans are prepared by the licensees occupy 64,304,896 acres; of these, 50 are operating under approved management plans and 21 are either in the process of revision or initial preparation. The plans for the 56 agreement forest units are scheduled for preparation over an eight-year period. The plans for the five nursery forests adjacent to the forest tree nurseries operated by the Department cover approximately 9,000 acres, and will be prepared by the Department staff on completion of the inventory program.

On Crown lands during 1964, 132 stand improvement projects were carried out on a gross area of 33,143 acres. These projects were designed to secure adequate regeneration following cutting operations or to improve growth and quality of young stands of timber. In addition, 26 stand improvement projects, covering 2,394 acres, were carried out by junior rangers during the course of their summer training. During the year, on Crown lands and agreement forests, 34,752,000 trees were planted on 63,507 acres, and a further 3,789 acres were seeded. Stand improvement work was carried out on 7,312 acres of 40 agreement forests, including harvest cutting, cleaning, pruning, thinning and girdling. In addition to normal woods labour, over 7,800 man-days of inmate labour from five minimum security camps (see p. 435) were used on stand improvement projects in Crown and agreement forest units.

Forest research programs in silviculture, site, tree breeding, reforestation, mensuration and mechanics were continued and advances were made in site studies for the classification of forest land which have now been extended to the operations of the Agricultural Rehabilitation and Development Act (ARDA). The success of experiments with the use of plastic tubes of 0.5 in. in diameter for the production of seedlings for outplanting has resulted in large-scale use of this method for pine species and is under investigation for spruce.

The results of work in forest fertilization and in prescribed burning in hardwoods indicate that fertilizing may be an economic way of shortening the rotation or increasing the yield of plantations or natural forest, and that burning may assist in the conversion of low-quality hardwood stands to those of better potential. A new type of aerial seeder to sow tree seeds from a helicopter was designed and successfully tested. The completion of a test of timber cruising and log scaling as a means of measuring the volume of forest

products shows the former to have considerable merit from the standpoint of cost and convenience. Tests in the lubrication of high-speed fire-pumps showed that the use of naphthenic base oils, instead of paraffin base oils, could increase considerably the service life of the motor. Additives are now being produced by oil companies that give almost equivalent results when used with paraffin base oils.

Three four-week fire control training courses were conducted in 1964, training 60 instructors and bringing the total of those completing the course to 167; for the first time, the attendance included out-of-the-province students and woods industry personnel. During the year, 500 Indians were given a four- to seven-day course in fire fighting.

All ten Department Otter aircraft have been equipped with a new 200-gal. water-dropping tank suspended under the fuselage. A similar type of tank is being designed for the Department's Beaver aircraft.

Manitoba.—The central administration of Manitoba's forests is organized into two Branches—Forest Management and Forest Protection. Each is in charge of a director and is a Branch of the Department of Mines and Natural Resources. The province is divided into eight regions, each under a regional supervisor who is responsible to the Directors of the Management and Protection Branches.

The Management Branch co-ordinates control measures for the propagation, improvement and management of the forests, the harvest of forest products, and forest inventory surveys. Two nursery stations are maintained to supply stock for reforestation of denuded Crown land and some natural seed areas have been established for nursery stock. Seedlings are supplied to farmers for shelterbelts and woodlots and to commercial Christmas tree producers. The program of forest stand improvement comprises thinning, clearing and chemical spraying to remove undesirable species and encourage growth of preferred trees. Forest inventories cover 3,000 to 4,000 sq. miles annually and on the basis of these inventories working plans with annual allowable cuts on a sustained yield basis have been brought into operation.

Timber cutting rights are awarded by Forest Management Licences, Timber Sales and, in certain cases (particularly for salvage operations), by Timber Permits. Forest Management Licences may be granted for periods of up to 20 years and are renewable. Timber Sales may be for varying periods from one year upward and Timber Permits for periods of up to one year. At present, one long-term Pulpwood Berth with an area of 2,745 sq. miles and 12 long-term Timber Berths, all granted prior to 1930, are in force.

The area of the province under forest fire protection is 120,000 sq. miles with zones of priority established in the less accessible areas. Fires are detected through a comprehensive network of lookout towers and supporting air and ground patrols, all tied together by radio and departmental or public telephones. Two Canso water-bombers and two helicopters are rented for the worst of the fire season to back up the aircraft of the Manitoba Government Air Service.

The province has no forestry research organization but co-operates with several federal services which maintain two research areas. The Department co-operates fully with federal authorities in investigating and controlling forest damage resulting from insects and diseases. Public education in the fields of fire prevention and forest conservation is carried out and use is made of all usual methods including radio, television, newspapers, signs, talks to school children and club members, film tours, etc.

Saskatchewan.—The forests of Saskatchewan are located mainly in the northern half of the province and cover 117,738 sq. miles, or 53 p.c. of the total land area. Provincial forests constitute approximately 92 p.c. of all forest land in the province and are managed and developed by the Forestry Branch of the Department of Natural Resources.

The Forestry Branch, consisting of six divisions—Administration, Fire Control, Forest Management, Forest Research, Inventory and Silviculture—is responsible for developing and evaluating forest policies and management programs based on the findings of

inventory and research. The responsibility for carrying out such policies and programs is borne by the various regional administrative authorities. For purposes of resource administration, the province, with the exception of the most northern portion, is divided into four regions, each under the supervision of a regional superintendent. The regions are subdivided into conservation officer districts which vary in size according to resource base and population to be served. In the most northern part of the province, because of various special programs with northern residents, resource administration is the responsibility of the Northern Affairs Branch of the same Department. Close liaison is maintained between the Forestry Branch and the various regional authorities.

A major responsibility of the Forestry Branch is the development of techniques in the prevention, detection and suppression of forest fires. A network of 72 lookout towers equipped with two-way radios is maintained throughout the province and is supplemented by three aircraft on regular patrol duty during the high-hazard periods. A group of smoke-jumpers, trained to parachute on remote fires, is in constant readiness during the fire season and, if necessary, takes immediate suppression action which it maintains until relieved by overland crews. Northern Saskatchewan's communication system, with more than 895 two-way radio sets in operation in towers, vehicles, aircraft and forest camps, plays a vital role in the detection and suppression of forest fires. These activities are assisted by the use of helicopters and aircraft equipped for water-dropping.

Alberta.—The 157,595 sq. miles of provincial forest in Alberta are administered by the Alberta Forest Service of the Department of Lands and Forests at Edmonton. The Service, headed by the Director of Forestry, is composed of five Branches—Administration, Forest Protection, Forest Management, Forest Surveys, and Planning and Forestry Training.

For ease of administration the forest area has been divided into eleven Forests, each responsible for the forest within its boundaries. These Forests are composed of Ranger Districts in which all activities are supervised by the district forest officer responsible to his superintendent. The Forest staffs include: forest superintendent, fire control officer, forester, chief ranger, mechanical foreman, carpenter foreman, equipment operators, scalers, land-use officers, radio operators, clerks, stenographers, and seasonal help such as standby fire crews, lookout men, general labourers and construction crews. Some Forests have minimum security crews that are employed in forest management, protection and construction projects.

The Administration Branch supervises all branches, maintains general control over revenue and expenditure, maintains the equipment inventory and deals with personnel.

The Forest Protection Branch has charge of all phases of protection including prevention, detection, suppression and use of forest and prairie fires. The Branch also plans, supervises and executes the construction and maintenance of the road and building programs and supervises the radio communication facilities.

The functions of the Forest Management Branch include the acceptance and approval of management and annual operating plans prepared for leased and licensed Crown lands, implementation of management plans prepared by the Department, supervision of proper land-use practices and the disposal of Crown timber. This extends to all phases including the processing of timber applications, selection of timber to be sold, the cruising of merchantable timber, inspections of cutting areas to ensure proper logging and utilization practices, scaling of forest products, collection of dues and fees and the reforestation programs for areas denuded by cutting and fire.

The Forest Surveys and Planning Branch maintains the provincial forest inventory and prepares and maintains detailed inventories by management units; prepares long- and short-term management and protection plans; provides timber application forest-type maps; conducts other work pertaining to photogrammetry and forest-cover maps; develops

and supervises recreational area plans; provides regulation of geophysical activities in the forest area; and provides technical drafting and mapping services to the Forest Service and the general public.

The Forestry Training Branch prepares training material and conducts training programs for Departmental personnel and other persons concerned with activities of fire control, forest management, forest protection and conservation. The Branch also organizes and supervises the activities of the Junior Forest Warden Clubs.

Two Forests and part of a third are included in the Rocky Mountains Forest Reserve. This area is administered by the Alberta Forest Service but decisions of the Director of Forestry are based on policies of wise watershed regulation formed by the Eastern Rockies Forest Conservation Board. The Board comprises one federal and two provincial members. This reserve includes part of the headwaters of the main prairie provinces river system. Research in general is carried out by the federal Department of Forestry, which maintains the Kananaskis Experiment Station.

British Columbia.—The productive forest land of British Columbia in 1958 was inventoried at 208,411 sq. miles and, in addition, there were 59,227 sq. miles of forest land classed as non-productive. Of the productive area, immature timber occurred on 95,739 sq. miles; 84,275 sq. miles carried matured timber with a total volume of 251,000,000,000 cu. feet; 28,397 sq. miles, including areas of recent burn, cut-over or windfall not yet re-stocked, were unclassified.

For administrative purposes, the province is divided into five Forest Districts with regional headquarters at Vancouver, Prince Rupert, Prince George, Kamloops and Nelson; a sixth District was established at Williams Lake but was not operational in 1965. Further decentralization of authority is effected by subdivision of the Forest Districts into Ranger Districts. There are approximately 25 Ranger Districts in each Forest District. Twelve directional, servicing or policy-forming divisions constitute the head office of the Forest Service at Victoria.

Efforts continue to bring British Columbia's forest resources under sustained-yield management and the forest industries are making progress toward more complete utilization of their raw materials. The problem is urgent despite the fact that, with a present annual scale of approximately 1,515,000,000 cu. feet, the total inventory would appear sufficient to support present needs in perpetuity. One of the more spectacular results of sustained-yield administration has been the swinging of a greater proportion of the annual forest harvest to the interior of the province. The over-cut coast (wet belt) forests now account for about 55 p.c. of the total forest cut each year and the interior cut for 45 p.c. For all practical purposes, the entire interior forest is publicly owned; the great majority of privately owned, leased or licensed forests are on the coast.

Several systems of timber disposal are in effect. The most publicized is the Tree Farm Licence, which constitutes a contract between the government and a company or individual whereby the latter agrees to manage, protect and harvest an area of forest land for the best possible return, in exchange for the right to the timber crop on the area. Tree Farm Licences are subject to re-examination for renewal every 21 years. Provincial Forests, Public Working Circles and Sustained-Yield Units are the governmental equivalent of the Tree Farm Licence with the timber, when it is ready for cutting, being disposed of by public auction. Of major interest is the establishment of the first "pulp harvesting" area in the vicinity of Prince George. This plan is unique in North America, calling for the integration of a "saw-log" economy with a new pulp industry. Management, silviculture, roadbuilding and protection on such areas are the responsibility of the Forest Service. Other tenures of lesser importance are Tree Farms, Farm Woodlot Licences, and those Timber Sales issued outside 'regulated' areas.

Forest fire prevention techniques and organization for effective forest fire suppression are important aspects of planned, sustained-yield management of the forest resource, and these are constantly under review by the Forest Service. Although the Forest Service

does not operate its own fleet of aircraft, extensive use is made of air tankers, patrol and reconnaissance aircraft, and helicopters under seasonal contracts. The predominantly rugged topography of the province and its extensive sparsely populated areas present problems in fire detection and accessibility to fires, and aircraft are playing an increasingly important part in the key initial discovery and attack period by supplementing the fixed lookout system and ground suppression organization. Close liaison with the federal Department of Forestry, which maintains laboratories in Vernon and Victoria, provides information about insect and fungal enemies of the forest.

Subsection 3.—The Pulp and Paper Research Institute of Canada*

The Pulp and Paper Research Institute of Canada is a centre of research and learning concerned with virtually every aspect of the production and use of pulp and paper products. It was established in 1913 as a branch of the Dominion Forest Products Laboratories and in 1927 was reorganized under the joint sponsorship of the Canadian Pulp and Paper Association, the Federal Government and McGill University. The Institute staff carries out fundamental research and some applied research in the fields of woodland operations and pulp and paper mill operations. In addition, in co-operation with McGill University, it trains postgraduate students who are working toward master's and doctorate degrees in physical chemistry, wood chemistry, or chemical and mechanical engineering, and whose theses subjects lie in fields of interest to the pulp and paper industry.

The Institute occupies a building on the McGill campus erected by the pulp and paper industry and a building at Pointe Claire on the western outskirts of Montreal constructed by the Government of Canada. The Institute's facilities include: organic and physical chemistry, physics, hydraulics and engineering laboratories; pilot plants for chemical pulping, pulp and chip refining and waste liquor pyrolysis; a greenhouse and other facilities for woodlands research; an extensive library; shops and special facilities for pulp and paper testing and for photographic and microscopic (both light and electron) studies of wood, pulp and paper. It has a staff of about 195.

The Institute's research activities comprise a basic program in pulp and paper research and in woodlands research, contract research, and technical services. The basic pulp and paper research program is supported by assessments from the Maintaining Membership (some 42 companies, representing more than 100 mills and about 95 p.c. of the total production of the Canadian industry) and by a grant from the Canadian Pulp and Paper Association. The woodlands research program is supported by assessments on all member companies of the Canadian Pulp and Paper Association east of the Rockies that use pulpwood and by a grant from the Association. Both programs comprise research of interest to the industry broadly, as distinct from that which is the concern of a single company only.

The projects in the basic programs range from studies of the growing seedling in the forest to the converted pulp and paper product, and fall into seven broad classifications: woodlands, mechanical pulping, chemical pulping, paper making, process control, product quality and waste utilization. The Institute is regarded as a centre for broad, long-range and uninterrupted studies of basic principles and for major engineering research and development projects which individual pulp and paper companies would find difficult to justify if the costs were not shared. Moreover, the Institute is a centre of highly specialized equipment and manpower which individual companies would not normally have.

In addition to its permanent staff, the Institute, in co-operation with McGill University, has some 40 graduate students working on fundamental projects in the background of pulp and paper technology, which also serve as their theses topics. The head of the Institute's Wood Chemistry Division, who is also Chairman of the Chemistry Department and the E. B. Eddy Professor of Industrial and Cellulose Chemistry at McGill, directs graduate student work on such subjects as the behaviour of the materials of which wood is made—cellulose, lignin and hemicelluloses. The head of the Institute's Physical Chemistry Division, also a Research Associate in the McGill Chemistry Department, directs

* Prepared by B. W. Burgess, Secretary, Pulp and Paper Research Institute of Canada, Montreal, Que.

graduate student work in the physical chemistry of fibres, e.g., the forces that cause cellulose fibres in a water suspension to mat together to form paper. An Associate Professor of Chemical Engineering at McGill, who is a consultant to the Institute, directs graduate students in such chemical studies as the rate of drying of droplets and fibres. In addition, other members of the Institute's staff who likewise hold concurrent honorary positions at McGill assist in this student training program.

The Institute also undertakes contract research projects on a cost-reimbursement basis for individual companies or groups of companies in the pulp and paper or allied fields. The larger of these co-operative contracts have been concerned with problems of particular segments of the Canadian pulp and paper industry, such as the investigation into the causes of corrosion in alkaline pulping equipment and the study of the rapid deterioration of paper machine wires.

A further function of the Institute is to provide a broad range of technical information services to the industry and, to some extent, to other industries and the public. It maintains a specialized library for this purpose which stocks bibliographies, abstracts, translations and critical reviews for the use of the scientific staff and the industry.

Section 1.—Canada's Mineral Industry, 1963-64*

The Canadian mineral industry in 1964 continued its record of production, expansion and diversification that has been such a strong factor in Canada's economic growth. Value of production rose 11.3 p.c. to a new high of \$3,397,000,000 from the previous peak of \$3,050,000,000 established in 1963. The high rate of advance, compared with advances of 4 to 8 p.c. each year since 1958, was the result of several factors—the first full year's production from several large mining projects, the start of production from other undertakings, the continuing buoyancy of the economies of major industrial nations, generally higher mineral and metal prices, and the strong competitive position of Canadian minerals and metals in most market areas.

The Canadian mineral industry is strongly export-oriented, about 60 p.c. of its output going to foreign countries. About 80 p.c. of mineral and metal exports go to the United States and nearly all of the remainder to Britain, Western Europe and Japan. Of total merchandise exports in 1963 valued at nearly \$9,800,000,000, \$2,243,000,000 were minerals and metals; of total exports in 1964 amounting to \$8,095,000,000, \$2,585,000,000 were minerals and metals. The mineral industry continues to be of first importance in helping to maintain and improve Canada's favourable balance-of-trade position. The growth of the mineral industry is most properly measured by the rise in the quantity index of mineral production which reached 326.5 (1949=100) from 294.4 in 1963. The metals index was 210.7 compared with 193.8 in 1963; the industrial minerals index rose from 228.1 to 324.9†, and the mineral fuels index again advanced sharply from 513.6 to 554.7. The per capita value of mineral production increased to \$176.61 from \$161.43. Capital investment and repair expenditures in the mineral industry were at an all-time high of \$794,000,000,

* Prepared under the direction of Dr. W. E. van Steenburgh, Deputy Minister of Mines and Technical Surveys, Ottawa, in the following Divisions: Introduction and Subsections 1 and 3 by the Mineral Resources Division; Subsection 2 by the Mineral Processing Division, Mines Branch; and Subsection 4 by the Fuels and Mining Practice Division, Mines Branch. Figures for 1964, except those in Subsection 4 on coal, are preliminary.

† See footnote 2 Table 8, p. 588.

up from \$678,000,000 in 1963. Estimates for 1965 capital investment and repair expenditures for the mineral industry at \$725,000,000 indicate that the strong growth experienced in recent years will continue.

However, expenditures on mining, quarrying and oil and gas wells, and value of mineral output do not wholly reflect the importance of the mineral industry to the nation's total economy. Such figures do not include expenditures in the many areas allied directly with the mineral industry such as primary facilities for metal recovery, nor do they include the large expenditures made for railroads, roads, docks, power developments and other projects that are directly attributable to mining developments. Neither do they indicate all the indirect employment in the allied, ancillary and service industries that is directly and indirectly related to mining developments. Such employment has been estimated to range from six to 10 persons for each person directly employed in mining, the estimate varying with the type of mining development. Mining is also responsible for opening up vast new areas to further mineral discoveries and settlement, providing diversified employment through tourism, forest operations, fishing and all other attendant service requirements. Mining has been responsible for all railway building in Canada since World War II and for many of the hydro-electric power developments.

Each of the three sectors of the industry—metallics, industrial minerals and mineral fuels—recorded a new high in 1964, the metallics sector registering the strongest advance both in absolute and percentage terms. Metallic minerals output was valued at \$1,704,600,000, up from \$1,509,500,000 the previous year. Shipments of industrial minerals, which include non-metallics and structural materials, were worth \$687,300,000 compared with \$632,500,000 in 1963. Mineral fuels production increased in value to \$1,005,200,000 from \$908,400,000. This was the first year that mineral fuels production was valued over \$1,000,000,000. In 1950, the output of the whole mineral industry for the first time reached a total value of \$1,000,000,000 and in that year mineral fuels were valued at only \$200,000,000. In 1964, Canada ranked first in world mine production of zinc for the first time, and this was the first year that iron ore was Canada's leading metallic mineral, displacing nickel.

The ten leading minerals in terms of value of output again accounted for about 80 p.c. of total output, essentially the same as for several years previously. Production values were appreciably higher for iron ore, zinc, copper, lead, natural gas and crude petroleum; small advances were made in nickel, asbestos, titanium dioxide and structural materials. Value of uranium (U_3O_8) shipments and gold production declined. The leading mineral commodities in value of output were crude petroleum, \$674,000,000; iron ore, \$403,000,000; nickel, \$382,000,000; copper, \$328,000,000; zinc, \$193,000,000; natural gas, \$184,000,000; asbestos, \$148,000,000; gold, \$144,000,000, and cement, \$133,000,000. Canada leads the non-communist world in the production of nickel, zinc, asbestos, platinum metals and columbium; is second in gold, uranium cobalt, cadmium and titanium; is third in sulphur, gypsum, magnesium and lead; and ranks high among world producers of copper, iron ore, silver and molybdenum.

Ontario remained Canada's leading mineral-producing province, output at \$911,000,000 being 26.8 p.c. of Canada's total. It was followed in order by Alberta with 22.0 p.c., Quebec with 19.8 p.c., Saskatchewan with 8.2 p.c., British Columbia with 7.9 p.c. and Newfoundland with 5.7 p.c. Mineral production gains were recorded for all ten provinces and the two territories with Quebec registering the strongest advance to \$672,000,000 from \$541,000,000. Ontario's percentage of Canada's total mineral production has been declining steadily for the past few years. Newfoundland, along with Quebec, registered a strong absolute and percentage gain over 1963, and Alberta, British Columbia, Saskatchewan and Manitoba all registered minor percentage losses although the value of output in each of them increased.

Exploration activity continued to be widespread and diversified in 1964 and several important discoveries were reported. Development of properties for early production was under way in all mineral-producing provinces and in the territories and it is noteworthy that

mineral discoveries and mine development programs were taking place in long-established mining areas as well as in the more remote parts of the country. Developments taking place in connection with the major mineral commodities are reviewed in succeeding Sub-sections but highlights of the year, by region, are mentioned briefly here. In British Columbia, the year was noteworthy because of the developments that took place in the non-ferrous minerals industry and the promise of greatly increased production of iron ore and molybdenum. Copper production, most of which is exported to Japan as concentrates, set a new high with production coming from several new operations and from established producers. There was higher output of lead and zinc, most of which is refined in the province. There were announcements of plans by large companies to develop substantial deposits of molybdenite for 1965-66 production which will make Canada the world's second largest producer of this important ferro-alloy material.

In the Prairie Provinces output of petroleum, natural gas and sulphur recovered from petroleum, and potash set new records. Potash deposits of Saskatchewan were being prepared for production by four companies whose output, plus that of two others already in production, will amount to between 4,000,000 and 5,000,000 tons in 1967. By 1970 Canada will probably be the world's most important producer of potash, an essential ingredient of manufactured fertilizers. The International Nickel Company of Canada, Limited is developing its Birchtree nickel deposit south of Thompson, Man., for 1968 production, to supplement output from its Thompson mine.

In the Northwest Territories, Pine Point Mines Limited commenced shipments in November of high-grade lead-zinc ore from substantial deposits at Pine Point on the south shore of Great Slave Lake. Shipments were made over the recently completed 430-mile railway to Grimshaw, Alta., and thence to Kimberley, B.C., for treatment. A new lode gold mine began operations in March 1964. In the Yukon Territory, Cassiar Asbestos Corporation Limited announced that it would develop, for 1968 production, good grade asbestos deposits some 120 miles northwest of Whitehorse.

In Ontario, near Timmins, Texas Gulf Sulphur Company continued development of its large zinc-copper-silver deposit discovered in 1964. The Company is developing an open-pit mine and will build a 6,000-ton-a-day concentrator with production scheduled for late 1966; reported reserves at the end of the year were 55,000,000 tons of ore averaging 7.08 p.c. zinc, 1.33 p.c. copper, and 4.85 oz. of silver per ton. Jones & Laughlin Steel Corporation commenced production of iron ore pellets from its Adams mine near Kirkland Lake; Caland Ore Company Limited started construction of its 1-million-ton-a-year pellet plant at Steep Rock Lake, and Strathgami Mines, Inc. began development of its iron ore property near Temagami for production of 1,500,000 tons of pellets a year. In the Sudbury area, development of nickel-copper mines continued as demand for nickel is expected to increase, and orderly development of indicated reserves is necessary for long-range planning of production.

Quebec's mineral industry continued to expand and set new production records. Iron ore, copper, asbestos, lead and zinc outputs were at all-time highs. The zinc-copper mines of the Matagami area completed their first full year of operation. New copper mines began production in the Noranda area and the capacity of the Valleyfield zinc refinery, which began operations in 1963, was being increased to 84,000 tons of electrolytic zinc a year. Arnaud Pellets 4,900,000-ton-a-year iron ore pellet plant at Pointe Noire was completed and being tuned up at the year-end. Concentrates for it will come from an associate company, Wabush Mines, at Lake Wabush, Labrador, the capacity of which is 5,500,000 tons of iron ore concentrates a year.

In New Brunswick, Brunswick Mining and Smelting Company Limited announced the expansion of base-metal operations, primarily zinc and lead, in the Bathurst area and the building, with other interests, of a large \$117,000,000 complex embracing chemical-manufactured fertilizer-steel-base metal production facilities. These will provide the province with a strong industrial base from which further industries will develop. The

Company's 4,500-ton-a-day mill is being expanded to treat 6,000 tons a day. It will open two new mines near Bathurst and continue construction of its zinc-lead blast-furnace plant at Belledune Point.

Production of industrial minerals in Nova Scotia continued a steady year-to-year growth, with gypsum, salt and barite being the leading minerals in value of output. Newfoundland continued to make large mineral production gains with iron ore, copper, lead and zinc being produced in record quantities.

Canada is the world's largest diversified exporter of minerals and metals, and follows the United States and the Soviet Union as a mineral-producing nation. The strong position it holds will continue and perhaps be improved as large deposits under development for several years reach production and as many smaller deposits continue to be developed for production each year. In addition to its prominent and sometimes dominant position in nickel, asbestos, zinc and uranium, it will become a very important world producer of a number of other mineral commodities, particularly potash and sulphur, as the mineral industry base becomes even more diversified. Much of the country's mineral-bearing lands, particularly in the northern two thirds of the country, remain virtually unexplored. This area should be no less productive of mineral wealth than the southern third, where important deposits are still being discovered and where much of the area remains to be intensively prospected.

The outlook for 1965 is one of continuing strong advances in all sectors of the mineral industry, at least comparable to those of 1964. Several important projects under development for some time will reach production in 1965 to help boost value of shipments of certain commodities to new records. They include the large lead-zinc deposits at Pine Point in the Northwest Territories; the 5,300,000-ton-a-year iron ore project of Wabush Mines in Labrador; copper production from new mines in all copper-producing provinces; increased output of potash in Saskatchewan and of elemental sulphur from gas processing in Alberta; the start of major molybdenite production in British Columbia; and steadily increasing output of crude petroleum and natural gas in Western Canada.

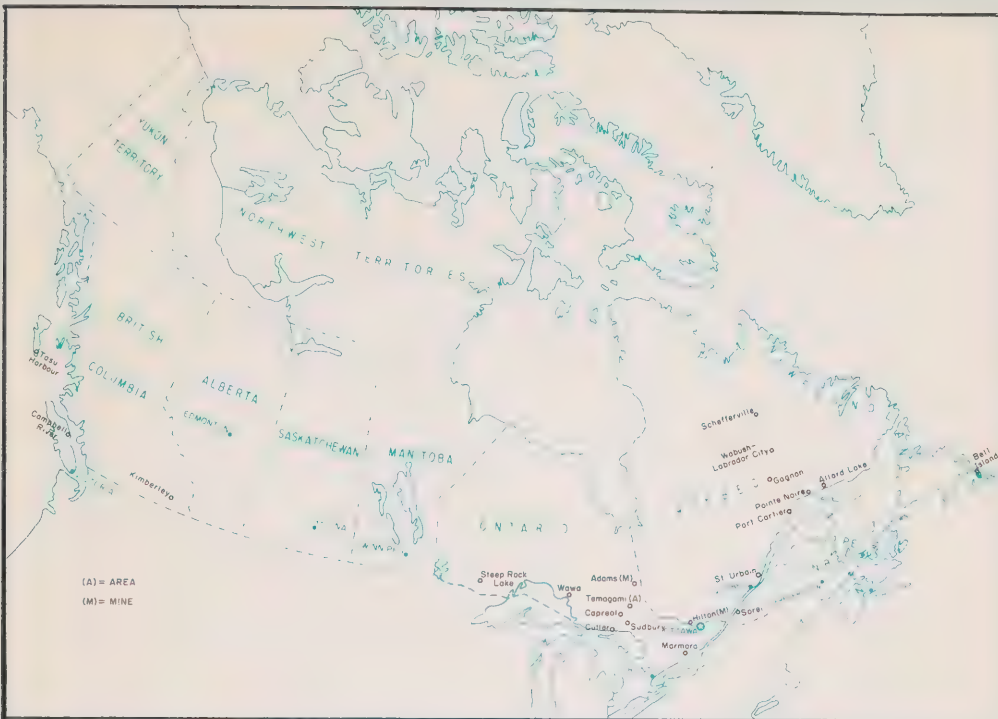

Competition for mineral products in major markets are, in many instances, becoming more severe each year. Notwithstanding considerably higher base-metal prices toward the end of 1964 and apparent shortages of lead, zinc and copper, mine development programs under way in many parts of the world will ensure adequate supplies in the near future so that further significant price increases are not likely to occur. From the many new and expanded mining operations in view in Canada over the next several years, coupled with buoyant conditions in the industrial economies of the world with consequent high demand for minerals and metals, the value of mineral production in Canada should reach \$1,000,000,000 a year in 1967, perhaps in 1966, and should approach the \$5,000,000,000-level in 1970. The future of Canada's mineral industry is one of growing importance to the country's economic well-being, and promises to become an ever-increasing factor in the economic, industrial and geographical development of the nation.

Subsection 1.—Metals

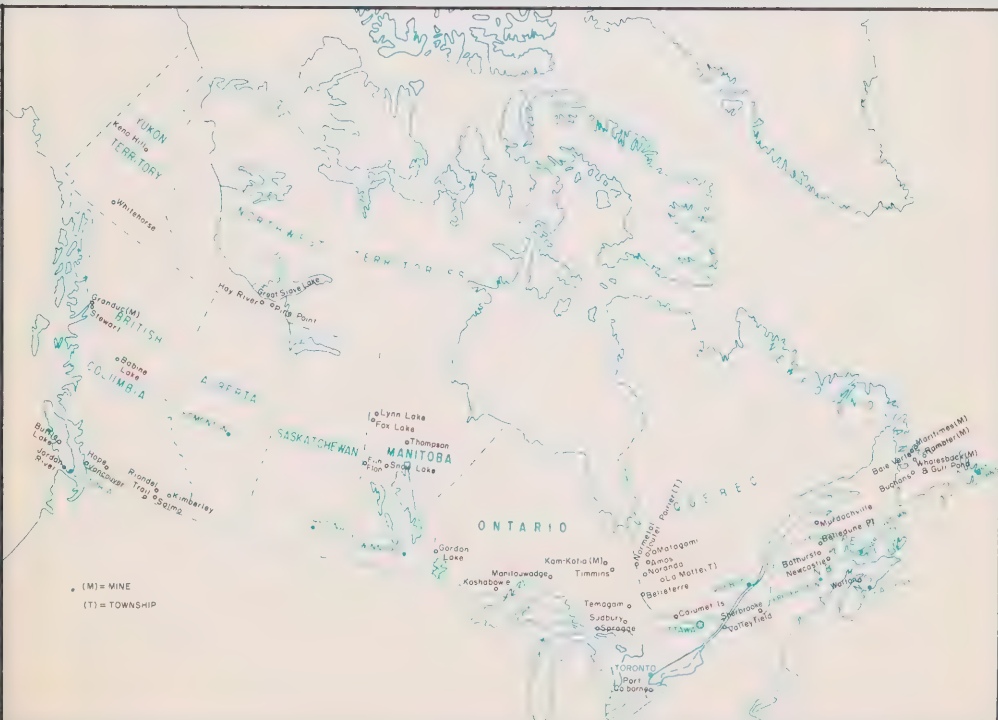

Iron Ore.—The Canadian iron ore industry experienced its third consecutive record year in 1964; shipments were 38,664,583 short tons, up 22 p.c. from 1963. The gain was largely the result of higher steel production rates in the United States. All four producing provinces and nearly all producers, including those that ship medium-grade ores, shared in the increase. Although shipments from British Columbia increased, the dollar value fell slightly from 1963 because of increasing price competition in the Japanese iron ore market. This resulted in lower prices on recent sales contracts. Because sales of medium-grade ores are expected to decline in future years, research on beneficiating them continued. Research has also been directed recently toward producing a partially reduced product in pellet form for use in blast furnaces.

There are five main market areas for Canadian ores—Canada, the United States, Britain, Japan and Western Europe. Shipments to domestic steel plants increased

IRON AND TITANIUM ORE REFERENCES

NON-FERROUS METALLIC ORE REFERENCES

slightly and imports, mainly from the United States, decreased; domestic ore accounted for 44 p.c. of Canadian consumption compared with 36 p.c. in 1963. Canadian steel companies import ore from the United States because they either participated in the development of mines there or established commercial ties with United States merchant companies prior to 1950, when little ore was mined in Canada. However, several domestic steel companies have recently participated in new mining ventures in Labrador and Ontario, and other similar investments in Canadian iron mines are being considered. By 1970, imports should account for no more than 10 p.c. of domestic iron ore consumption.

Shipments to the United States, by far Canada's largest market, rose by 6,500,000 tons in 1964, and United States sales accounted for 72 p.c. of total Canadian iron ore shipments. Canada supplied 59 p.c. of that country's imports. United States imports from other countries rose by about 3,000,000 tons. Canadian iron ore exports to Britain were also substantially higher in 1964, mainly because of accelerated sales of high-grade pellets and concentrates which began in 1963; shipments of medium-grade ore increased slightly. Exports to both Japan and Western Europe were lower in 1964 than in 1963. Sales to Japan should recover in 1965. In Western Europe, Canadian ore producers have been meeting increasing competition from mines in Africa and South America. Canada may experience increased sales of high-grade concentrates and pellets to Western Europe in the next few years; in past years, nearly all European sales were of medium-grade ore. European steel production recovered strongly in 1964 after a period of stagnation following the high-growth years of the late 1950's.
